Regressions in Mental Development Thomas G. Bever, 1982 **Regressions in Mental Development** Thomas G. Bever, 2017-12-06 Science depends on noticing that things which seem identical are different and conversely In psychology one cannot assume that apparently identical behaviours are due to identical mechanisms The work reported in this book involves the problem of classifying the true nature of behaviour as it appears during child development Originally published in 1982 the papers in this volume attempt to interpret explain or explain away developmental regressions in a variety of different areas In spring 1975 a group of scholars interested in such problems met for several days to discuss their individual findings and the underlying theoretical issues This volume reflects both the discussions at the original conference and succeeding years of thinking reading and writing **Regression Periods in Human infancy** Mikael Heimann, Frans X. Plooij, 2003-10-17 Regression periods play a central role in the psychological development of the human baby Studies of infants have identified 10 periods of regression or a return to a high frequency of mother infant contact within the first 20 months of life These periods of emotional insecurity in the child signal forthcoming periods of developmental advance and the emergence of an array of new skills as a consequence of parent infant conflict over body contact and the renegotiation of old privileges Although the basic idea in this book is an old one the authors believe that regression periods deserve further study and have identified four questions of central importance today Can the phenomenon of regression periods as found by Dutch researchers in 1992 be replicated in other countries and cultures What environmental conditions have an effect on these regression periods and how Are there physical conditions in infants that show a non linear distribution over age similar to regression periods Have brain changes been detected since the review of Fischer Rose 1994 at other ages than the six reported by them and if yes how do these relate to the ages at which regression periods are found Forming the core of this book the replication studies performed in Sweden Spain and England provide support that regression periods are a reliable phenomenon and should be dealt with accordingly whenever developmental processes in infancy are discussed **The Research Basis for Autism Intervention** Eric Schopler, Nurit Yirmiya, Cory Shulman, Lee M. Marcus, 2007-05-08 As the past President of the Israel Society for Autism it gives me great pleasure to congratulate Professor Schopler and his colleagues on the publication of their new book concerning the relationship between scientific research and treatment When we in Israel began our specifically structured education program for young children with autism our work was based on slim to scarce knowledge and information and with no experience whatsoever Whatever information we could gather was mostly from psychological educational centers in the U S One of the most important and significant connections was established between the TEACCH program of North Carolina led and conducted by the two important scholars Professor Eric Schopler and Professor Lee Marcus and our Israel Society for Autism During our many encounters seminars and conferences we profited enormously from all their accumulated expertise and scientific research while perhaps it was also an important experience

for them to see how a young society with very limited means was eventually shaping its educational program and arriving at some excellent results We ofcourse have the highest esteem for Governor Hunt who has been following this program with so much attention and support and we still remember his visit to Israel with distinguished representatives of the TEACCH Program I wish the new book every success I know it will be an enormous contribution to all those who must cope with a difficult and painful issue autism for whom there is no end to the need for research and continuously improving methods of care and education

Developing Theories of Intention Philip David Zelazo, Janet Wilde Astington, David R. Olson, 2023-05-31 The chapters collected in this volume represent the state of the art of research on the development of intentional action and intentional understanding topics that are at the intersection of current research on imitation early understanding of mental states goal directed behavior in nonhuman animals executive function language acquisition and narrative understanding to name just a few of the relevant foci Collectively the contributors demonstrate that intentionality is a key issue in the cognitive and social sciences Moreover in a way that was anticipated more than a century ago by the seminal work of J Mark Baldwin they are beginning to reveal how the control of action is related in development to children s emerging self conscious and their increasingly sophisticated appreciation of other people s perspectives This volume brings together the world s leading researchers on early social and cognitive development in an in depth exploration of children s understanding of themselves and others

The Self in Infancy P. Rochat,1995-10-30 The origins of knowledge about the self is arguably the most fundamental problem of psychology It is a classic theme that has preoccupied great psychologists beginning with William James and Freud On reading current literature today s developmental psychologists and ethologists are clearly expressing a renewed interest in the topic Furthermore recent progress in the study of infant and animal behavior provides important and genuinely new insights regarding the origins of self knowledge This book is a collection of current theoretical views and research on the self in early infancy prior to self identification and the well documented emergence of mirror self recognition The focus is on the early sense of self of the young infant Its aim is to provide an account of recent research substantiating the precursors of self recognition and self identification By concentrating on early infancy the book provides an updated look at the origins of self knowledge

Adaptive and Maladaptive Aspects of Developmental Stress Giovanni Laviola,Simone Macrì,2013-01-31 Since the very early stages of life we all experience some form of stress Stressors can be mild to severe and can range from unsuccessfully longing for maternal milk in infancy to recklessly wiggling on a motorbike to be on time to watch the NBA finals on TV to breaking up a relationship All those events that we call stress have the capability of perturbing a given state of psychological and physiological equilibrium and moving it to a different level The transition from crawling to walking has to be considered a form of stress as much as losing a job It is through a continuous cross talk between environmental stressors and individual adaptations that we build our personalities and our ways to cope with daily hassles External challenges should not necessarily be regarded as bad but instead seen as constructive forces forming our ability to navigate a changing world What is stress good for What is stress bad for When and why do we need to be stressed Should we worry about stress When does stress equate to normality When does it turn into pathology We hope with this book to provide some answers to these fundamental questions

Intrapersonal Communication Donna R. Vocate,2012-12-06 Intrapersonal communication is a relatively new phenomenon for

communication study and still lacks the grounding of a sound theoretical base. The first to present a developed theory of this discipline, this book's goal is to provide graduate students and professionals with an organized point of departure for their research. The theoretical section begins with an intrapersonal communication theory derived from the sociogenetic views of George Herbert Mead and L. S. Vygotsky. This theory emphasizes social interaction, the developmental nature of mind, and the crucial role of speech in creating a self, a culture, and a mind which then interact in human intrapersonal communication. This section also provides the reader with a coherent interdisciplinary knowledge base taken from speech communication, biology, neurology, cultural psychology, anthropology, sociology, speech pathology, and linguistics. The integrated theoretical perspective that results makes the study compatible with communication scholarship focusing on the social, cultural, cognitive, or performance aspects of communication phenomena. The applications section examines neurophysiological, intrapersonal communication research methods and studies to date together with specific applications of intrapersonal communication theory to childhood language acquisition, to the establishment of gender identities, and to intrapersonal competence. The final chapter presents pedagogical guidance on how we can influence intrapersonal competence and performance, as well as commenting on the current state of this study and its future prospects. The editor's interstitial commentary facilitates access by readers wishing to construct their own theory.

Beyond the Psychoanalytic Dyad John P. Muller, 2014-01-14. In this original work of psychoanalytic theory, John Muller explores the formative power of signs and their impact on the mind, the body, and subjectivity, giving special attention to the work of the French psychoanalyst Jacques Lacan and the American philosopher Charles Sanders Peirce. Muller explores how Lacan's way of understanding experience through three dimensions—the real, the imaginary, and the symbolic—can be useful both for thinking about cultural phenomena and for understanding the complexities involved in treating psychotic patients, and develops Lacan's perspective gradually, presenting it as distinctive approaches to data from a variety of sources.

Criteria for Competence Michael Chandler, Michael Chapman, 2013-06-17. One of developmental psychology's central concerns is the identification of specific milestones which indicate what children are typically capable of doing at different ages. Work of this kind has a substantial impact on the way parents, educators, and service-oriented professionals deal with children, and therefore one might expect that developmentalists would have come to some general agreement in regard to the ways they assess children's abilities. However, as this volume demonstrates, the field appears to suffer from a serious lack of consensus in this area. Based on the premise that identifying relevant issues is a necessary step toward progress, this book addresses a number of vital topics such as: How could research into fundamental areas such as the age at which children first acquire a sense of self or learn to reason transitively repeatedly yield wildly diverse results? Why do experts who hold to radically different views appear to be so unruffled by this same divergence of professional opinion? And are there grounds for hope that this divergence of professional opinion is on the wane?
