White, 1986 Over the course of half a century Gilbert F White's work has served to shape and in several instances establish many of the fields that have come to be known as the environmental sciences In this collection of original essays a companion volume to White's selected writings volume I leading scholars in areas such as water supply environmental hazards and natural resource management interpret changes in these fields since White's work and assess present and future problems With volume 1 this collection presents a complete and cogent picture of Gilbert White's contribution and the work he inspired *Geography, Resources, and Environment: Selected writing of Gilbert F. White* Robert William Kates, Ian Burton, 1986 **America's Renewable Resources** Kenneth D. Frederick, Roger A. Sedjo, 2013-10-18 By recording one country's experience with its vast natural resource base America's Renewable Resources Historical Trends and Current Challenges will help to inform the management of future demands on the resource base in the U S and throughout the world The contributors focus specifically on renewable resources water forests rangeland cropland and soils and wildlife which possess the capacity to restore themselves after they have been consumed Because this capacity can be destroyed and the time required for restoration can be very long a balance in their use is necessary to sustain continued productivity In arresting fashion the authors trace the history of each resource's use from early colonial times through periods of dramatic sometimes cataclysmic changes in its utilization by an expanding diversifying society They show how unforeseen consequences have forced social institutions into existence and compelled policy makers especially at the federal level to deal with problems for which they were largely unprepared America's Renewable Resources by examining changes in demand technologies policies and institutions will assist both policy makers and the public at large to look past short term events to the conditions fundamental to maintaining our future economic and environmental wellbeing Originally published in 1991 [American Hazardscapes](#) Susan L. Cutter, 2002-02-01 Barrier islands Flood plains Earthquake faults Sometimes the environment poses threats to our well being yet many of us continue to choose to live in risky or dangerous places And on top of the knowns are the other more hidden hazards related to environmental contamination that pose equally serious threats to our health and well being But where are these places and what types of hazards are found there American Hazardscapes examines the risks associated with living and

owning property in diverse regions across the United States offering dual perspectives that of the geographer and that of the social science hazards researcher The book summarizes what we already know about regional patterns of hazard events and losses during the previous three decades and goes further to shed light on the nature of the events themselves and their impact on society Written for the relocating citizen and the policy maker alike *American Hazardscapes* presents a regional ecology of disaster prone or disaster resistant states It also offers thoughts on what local state and federal managers need to do to meet the challenge of reducing hazard losses in the next century

Unifying Geography David T. Herbert, John A. Matthews, 2004-08-05 It can be argued that the differences in content and approach between physical and human geography and also within its sub disciplines are often overemphasised The result is that geography is often seen as a diverse and dynamic subject but also as a disorganised and fragmenting one without a focus *Unifying Geography* focuses on the plural and competing versions of unity that characterise the discipline which give it cohesion and differentiate it from related fields of knowledge Each of the chapters is co authored by both a leading physical and a human geographer Themes identified include those of the traditional core as well as new and developing topics that are based on subject matter concepts methodology theory techniques and applications Through its identification of unifying themes the book will provide students with a meaningful framework through which to understand the nature of the geographical discipline *Unifying Geography* will give the discipline renewed strength and direction thus improving its status both within and outside geography

The Great American Mission David Ekbladh, 2011-08-08 The Great American Mission traces how America's global modernization efforts during the twentieth century were a means to remake the world in its own image David Ekbladh shows that the emerging concept of modernization combined existing development ideas from the Depression He describes how ambitious New Deal programs like the Tennessee Valley Authority became symbols of American liberalism's ability to marshal the social sciences state planning civil society and technology to produce extensive social and economic change For proponents it became a valuable weapon to check the influence of menacing ideologies such as Fascism and Communism Modernization took on profound geopolitical importance as the United States grappled with these threats After World War II modernization remained a means to contain the growing influence of the Soviet Union Ekbladh demonstrates how U S led nation building efforts in global hot spots enlisting an array of nongovernmental groups and international organizations were a basic part of American strategy in the Cold War However a close connection to the Vietnam War and the upheavals of the 1960s would discredit modernization The end of the Cold War further obscured modernization's mission but many of its assumptions regained prominence after September 11 as the United States moved to contain new threats Using new sources and perspectives The Great American Mission offers new and challenging interpretations of America's ideological motivations and humanitarian responsibilities abroad

Integrated Regional Assessment of Global Climate Change, *Water Management in the 21st Century* Terence R. Lee, 1999 The challenge to manage the allocation of water efficiently and equably will become a dominant theme of the new millennium At a time when the cost of obtaining fresh water is rising throughout the globe Terence Lee analyses the means for establishing and operating effective water markets He proposes the application of economic instruments and the transfer of water management administration to the private sector as a means to guarantee acceptable water quality in the future in both developed and developing countries This treatment of water as an economic commodity implies a change in the traditional role of governments in water management The themes explored in this book will be of interest to environmental and resource economists as well as practitioners and policymakers

The Dilemma of Siting a High-Level Nuclear Waste Repository D. Easterling, Howard Kunreuther, 2013-12-01 This book explores siting dilemmas situations in which an authority e g Congress a consortium of utilities deems it in the best interest of society to build a facility such as an incinerator but opponents living near the proposed site thwart the plan Facility developers typically attribute local opposition to selfishness or radically inaccurate views of the risks posed by the facility We examine the validity of these conclusions by looking in depth at the psychological response that arises when residents are faced with the prospect of living near waste disposal facilities The particular siting dilemma considered in this book is the problem of how to dispose of the high level nuclear wastes accumulating at nuclear power plants in the United States These wastes in the form of spent fuel rods will emit dangerous levels of radioactivity for thousands of years anywhere between 10 000 and 100 000 years depending on the margin of safety one adopts The current proposal is to encase the spent fuel in corrosion resistant canisters and then to bury these canisters deep underground in a geologic repository The two of us became involved with the high level waste issue in 1986 as part of an interdisciplinary research team hired by the State of Nevada The charge of this team was to estimate the socioeconomic impacts that would accompany a repository if it were built at Yucca Mountain approximately 100 miles northwest of Las Vegas
