My Little Ababin:

Beads, Basketball, and a Baby Cornel A. Keeler, 2016-12-21 The book deals with decisions made by the characters that would affect their future lives How it affects their lives is surprising and unpredictable In these stories the characters are driven by their egos The results are sometimes good and sometimes bad and sometimes it is up to the reader's opinion

Supreme Court , **Advances in Wave Interaction and Turbulence** Paul A. Milewski, 2001 We often think of our natural environment as being composed of very many interacting particles undergoing individual chaotic motions of which only very coarse averages are perceptible at scales natural to us However we could as well think of the world as being made out of individual waves This is so not just because the distinction between waves and particles becomes rather blurred at the atomic level but also because even phenomena at much larger scales are better described in terms of waves rather than of particles It is rare in both fluids and solids to observe energy being carried from one region of space to another by a given set of material particles much more often this transfer occurs through chains of particles neither of them moving much but each communicating with the next and hence creating these immaterial objects we call waves Waves occur at many spatial and temporal scales Many of these waves have small enough amplitude that they can be approximately described by linear theory However the joint effect of large sets of waves is governed by nonlinear interactions which are responsible for huge cascades of energy among very disparate scales Understanding these energy transfers is crucial in order to determine the response of large systems such as the atmosphere and the ocean to external forcings and dissipation mechanisms which act on scales decades apart The field of wave turbulence attempts to understand the average behavior of large ensembles of waves subjected to forcing and dissipation at opposite ends of their spectrum It does so by studying individual mechanisms for energy transfer such as resonant triads and quartets and attempting to draw from them effects that should not survive averaging This book presents the proceedings of the AMS IMS SIAM Joint Summer Research Conference on Dispersive Wave Turbulence held at Mt Holyoke College MA It drew together a group of researchers from many corners of the world in the context of a perceived renaissance of the field driven by heated debate about the fundamental mechanism of energy transfer among large sets of waves as well as by novel applications and old ones revisited to the understanding of the natural world These proceedings reflect the spirit that permeated the conference that of friendly scientific disagreement and genuine wonder at the rich phenomenology of waves **The Arnoldfest** Vladimir Igorevich Arnol'd, 1999 This volume presents articles originating from invited talks at an exciting international conference held at The Fields Institute in Toronto celebrating the sixtieth birthday of the renowned mathematician Vladimir Arnold Experts from the world over including several from Arnold's school gave illuminating talks and lively poster sessions The presentations focused on Arnold's main areas of interest singularity theory the theory of curves symmetry groups dynamical systems mechanics and related areas of mathematics The book begins with notes of three lectures by V Arnold given in the framework of the Institute's Distinguished

Lecturer program The topics of the lectures are 1 From Hilbert's Superposition Problem to Dynamical Systems 2 Symplectization Complexification and Mathematical Trinities 3 Topological Problems in Wave Propagation Theory and Topological Economy Principle in Algebraic Geometry Arnold's three articles include insightful comments on Russian and Western mathematics and science Complementing the first is Jurgen Moser's Recollections concerning some of the history of KAM theory

The Vertebral Artery Bernard George, Claude Laurian, 2012-12-06 Our common interest in surgery of the vertebral artery was born in 1976 when as residents in the same hospital we attended an attempt by two senior surgeons to treat an aneurysm of the vertebral artery at the C 3 level Long discussions had preceded this unsuccessful trial to decide if surgery was indicated and to choose the surgical route Finally a direct lateral approach was performed but access was difficult and correct treatment was impossible resulting in only partial reduction of the aneurysmal pouch Following this experience we decided to seek a regular and well defined approach for exposition of the vertebral artery Review of the literature indicated some surgical attempts but the descriptions did not give the impression of safety and reproducibility No landmark on the described surgical route appeared sufficiently reliable Henry's anatomical work 1917 gave the only accurate description on vertebral artery anatomy and it became the basis for our work When the same patient was referred again one year later after a new stroke in the vertebro basilar system we had behind us repetitive experience on cadavers of an original approach to the distal vertebral artery
