Research Papers: Taxes Commission on Private Philanthropy and Public Needs, 1977 **The Structure and Reform of Direct Taxation (Routledge Revivals)** James Meade, 2013-09-05 First published in 1978 The Structure and Reform of Direct Taxation presents the full findings and recommendations of the Meade committee set up by The Institute for Fiscal Studies It represents the most important contemporary examination of the structure of UK taxation and direct taxation systems in general The results of two years intensive research and discussion by this independent committee are presented as a report under the joint authorship of an outstanding team of tax experts The committee brought together professional practitioners lawyers accountants and taxation administrators and academic specialists in fiscal studies and here provides a unique review of direct taxation which is comprehensive singularly original and full of good sense The book begins with a return to first principles restates the objectives of a good tax system and analyses existing structures It goes on to examine the feasibility of basic reforms which would allow the system to become more straightforward in operation and which would base taxation on what individuals take out of the economy rather than on what they put into it *Tax By Design* Institute for Fiscal Studies (IFS), James Mirrlees, 2011-09-01 Tax by Design identifies what makes a good tax system for an open developed economy in the 21st century and suggests how the UK tax system could be reformed to move in that direction The recommendations stress the importance of neutrality and transparency in tax design It draws on the expert evidence from the commissioned chapters and commentaries in Dimensions of Tax Design It also acknowledges the growing importance of globalised markets and multinational corporations as well as the challenges created by changing population demographics the growth of new technologies and the broadened objectives of policy makers The Commission's work was directed by Timothy Besley Richard Blundell Malcolm Gammie James Poterba The Commission's editorial team Stuart Adam Stephen Bond Robert Chote Paul Johnson Gareth Myles **Just Taxes** Martin Daunton, 2002-10-17 In 1914 taxation was about 10 per cent of GNP by 1979 taxes had risen to almost half of the total national income and contributed to the rise of Thatcher Martin Daunton continues the story begun in Trusting Leviathan offering an analysis of the politics of acceptance of huge tax rises after the First World War and asks why it did not provoke the same levels of discontent in Britain as it did on the continent

He further questions why acceptance gave way to hostility at the end of this period Daunton views taxes as the central driving force for equity or efficiency As such he provides a detailed discussion of their potential in providing revenue for the state and their use in shaping the social structure and influencing economic growth Just Taxes places taxation in its proper place at the centre of modern British history **Behavioral Simulation Methods in Tax Policy Analysis** Martin

Feldstein,2007-12-01 These thirteen papers and accompanying commentaries are the first fruits of an ongoing research project that has concentrated on developing simulation models that incorporate the behavioral responses of individuals and businesses to alternative tax rules and rates and on expanding computational general equilibrium models that analyze the long run effects of changes on the economy as a whole The principal focus of the project has been on the microsimulation of individual behavior Thus this volume includes studies of individual responses to an over reduction in tax rates and to changes in the highest tax rates a study of alternative tax treatments of the family and studies of such specific aspects of household behavior as tax treatment of home ownership charitable contributions and individual saving behavior Microsimulation techniques are also used to estimate the effects of alternative policies on the long run financial status of the social security program and to examine the effects of alternative tax rules on corporate investment and of foreign source income on overseas investment The papers devoted to the development of general equilibrium simulation models to include an examination of the implications of international trade and capital flows a study of the effects of capital taxation that uses a closed economy equilibrium model and an examination of the effect of switching to an inflation indexed tax system In the volume s final paper a life cycle model in which individuals maximize lifetime utility subject to a lifetime budget constraint is used to simulate the effects of tax rules on personal savings **Combat Poverty Agency Pre-Budget Submission 1998:**
