The Interface Between the Psychodynamic and Behavioral Therapies Judd Marmor, 2012-12-06 It is sobering to reflect that it has been nearly fifty years since Thomas French's article on the Interrelations between Psychoanalysis and the Experimental Work of Pavlov representing the first psychoanalyst to bridge the gap between the theories of conditioning was published. In his paper French clearly delineated the manner and directions in which these two points of view might enrich each other. Regrettably his openness to new ideas has not been characteristic of most schools of psychiatry thought which have tended instead to develop an unfortunate degree of insularity. This has occurred despite the obvious reality that the bio-social psychological nature of man is such that no one theory or discipline is likely in the foreseeable future to explain much less predict all of the complexities of human behavior. All too often disputing theoreticians like the fabled blind men describing the elephant assume that the whole is just a gigantic magnification of the parts with which they are in contact. When treatment strategies are extrapolated from such narrow views more often than not they fail to achieve the parsimony of effort, the breadth of application and the maximum of efficiency that one would hope for. In our opinion it is impossible adequately to conceptualize personality development, symptom formation or responses to psychotherapy without taking into consideration theories of conflict as well as those of learning.

Psychology of Self-Regulation Joseph P. Forgas, Francis Eppes Eminent Scholar and Professor of Psychology Roy F. Baumeister, PhD, Roy F. Baumeister, Dianne M. Tice, 2011-02-25 The ability to regulate and control our behaviors is a key accomplishment of the human species yet the psychological mechanisms involved in self-regulation remain incompletely understood. This book presents contributions from leading international researchers who survey the most recent developments in this fascinating area. The chapters shed new light on the subtle and often subconscious ways that the people seek to regulate their thoughts, feelings and behaviors in everyday social life. The contributions seek answers to such intriguing questions as: How can we improve our ability to control our actions? How do people make decisions about which goals to pursue? How do we maintain and manage goal-oriented behavior? What happens when we run out of self-regulation resources? Can we match people and the regulatory demands of specific tasks so as to optimize performance? What role does self-regulation play in sports performance, in maintaining successful relationships and in managing work situations? The book offers a highly integrated and representative coverage of this important field and is suitable as a core textbook in advanced courses dealing with social behavior and the applications of psychology to real-life problems.

Motivation and Self-Regulation Across the Life Span Jutta Heckhausen, Carol S. Dweck, 1998-10-28 A group of internationally renowned scholars discuss their research on motivation.
