Lion, 1974 *Personality Disorders* Peter Tyrer, 1988 Personality Disorders Mario Maj, 2005-05-13 This 8th volume of the WPA series in Evidence and Experience in Psychiatry provides an update of research evidence and clinical experience concerning personality disorders A general term for a group of behavioural disorders personality disorders are usually characterised by lifelong ingrained maladaptive patterns of deviant behaviour lifestyle and social adjustment that are different in quality from psychotic and neurotic symptoms The book reviews recent progress and current controversies in this area providing a guide to clinicians and a contribution to the ongoing revision of the two main diagnostic systems the DSM IV and ICD 10 Written by Mario Maj an internationally renowned psychiatrist and secretary for publications of the World Psychiatric Association this work includes coverage of neuroscientific and psychiatric aspects and is an unbiased and reliable reference point **Handbook of Mental Health and Aging** James E. Birren, Gene D. Cohen, R. Bruce Sloane, Barry D. Lebowitz, Donna E. Deutchman, May Wykle, Nancy R. Hooyman, 2013-10-22 This book is a thorough revision of one of the most comprehensive reference volumes for persons working in the area of aging and mental health The thrust of the work is interdisciplinary and discusses research on both clinical and practical issues in aging and mental health The multidisciplinary nature of this book and the inclusion of subject matter from the professional as well as research realm result in a level of comprehensiveness which is distinct in the field of mental health and aging Each chapter contains a comprehensive bibliography the compilation of which represents a definitive reference source in the field The chapters review state of the art research in the biological behavioral and social sciences and represent the cutting edge of current practice in psychiatry neurology social work nursing psychology and pharmacology among other professions The compilation of prevalence data is a much needed addition to the current literature The multidisciplinary nature of this book and the inclusion of both clinical and practical issues makes the book distinctively comprehensive **Dimensional Models of Personality Disorders** Thomas A. Widiger, Paul J. Sirovatka, Darrel A. Regier, Erik Simonsen, 2007-05-03 DSM IV and ICD 10 both diagnose personality disorders categorically yet studies indicate that many patients meet criteria for an excessive number of diagnoses raising the question of whether personality disorders are discrete conditions or rather distinctions along dimensions of general personality functioning This collection of papers renews long standing proposals for a dimensional model of personality disorder describing alternative models addressing questions about their clinical application and utility and suggesting that future research seek to integrate such models within a common hierarchical structure With contributions by preeminent researchers in the field Dimensional Models of Personality Disorders is drawn from a conference series convened by APA WHO and NIH in order to plan for the fifth edition of the DSM The Nomenclature Work Group concluded that consideration should be given to basing part or all of DSM V on dimensions rather than categories and recommended that a dimensional model for personality disorders should serve as a basis for exploring dimensional approaches in other

areas Accordingly the volume opens with a presentation of 18 proposals for dimensional models and proceeds with provocative contributions on a number of related issues ranging from hard science to clinical practice Among the topics addressed are Behavioral and molecular genetic research supporting an etiologically informed dimensional classification of personality disorders The as yet tenuous associations between dimensional trait measures of personality as contained in the models of Cloninger Depue and Siever Davis and specific neurobiological measures as examined in neurotransmitter research Potential links between childhood and adolescent temperament and personality dimensions and adult personality psychopathology Studies examining the covariation of personality dimensions across cultures The continuity of Axis I and Axis II disorders and a proposed hierarchical structure of mental disorders that integrates the psychopathology of Axis I disorders with specific personality traits The dual challenges of coverage and cutoffs that must be addressed if dimensional models are to be considered viable alternatives to the existing categorical diagnostic system Although the editors acknowledge that concerns are certain to be raised regarding conversion to a dimensional classification such as the disruption to clinical practice by a radical shift in diagnosing personality disorder these papers make a strong case for opening the field to alternative ways of enhancing clinical utility and improving the validity of basic classification concepts Together they offer stimulating insight into how we approach personality disorders with the hope of encouraging a new model of diagnosis for DSM V *Diagnosis and Treatment of Mental Disorders Across the Lifespan* Stephanie M.
