Managing Water as an Economic Resource James Winpenny, 2005-07-22 Water already a scarce resource is treated as though it were plentiful and free The task of supplying enough water of the required quality to growing populations is straining authorities and governments to the limit as the economic and environmental costs of new supply sources escalate and wasteful supply delivery and consumption systems persist *Managing Water as an Economic Resource* argues that the root of the crisis is the failure of suppliers and consumers to treat water as a scarce commodity with an economic value James Winpenny evaluates policies for the improved management of existing demand and draws on case studies from different countries as he discusses how policies could be implemented to treat water as an economic good conferring major economic financial and environmental benefits

A Research Agenda For DSM V David J. Kupfer, Michael B. First, Darrel A. Regier, 2008-08-13 In the ongoing quest to improve our psychiatric diagnostic system we are now searching for new approaches to understanding the etiological and pathophysiological mechanisms that can improve the validity of our diagnoses and the consequent power of our preventive and treatment interventions venturing beyond the current DSM paradigm and DSM IV framework This thought provoking volume produced as a partnership between the American Psychiatric Association the National Institute of Mental Health the National Institute on Alcohol Abuse and Alcoholism and the National Institute on Drug Abuse represents a far reaching attempt to stimulate research and discussion in the field in preparation for the eventual start of the DSM V process still several years hence The book Explores a variety of basic nomenclature issues including the desirability of rating the quality and quantity of information available to support the different disorders in the DSM in order to indicate the disparity of empirical support across the diagnostic system Offers a neuroscience research agenda to guide development of a pathophysiologically based classification for DSM V which reviews genetic brain imaging postmortem and animal model research and includes strategic insights for a new research agenda Presents highlights of recent progress in developmental neuroscience genetics psychology psychopathology and epidemiology using a bioecological perspective to focus on the first two decades of life when rapid changes in behavior emotion and cognition occur Discusses how to address two important gaps in the current DSM IV 1 the categorical method of diagnosing personality disorders and their relationship with Axis I disorders and 2 the limited provision for the diagnosis of relational disorders suggesting a research agenda for personality disorders that considers replacing the current categorical approach with a dimensional classification of personality Reevaluates the relationship between mental disorders and disability asserting that research into disability and impairment would benefit from the diagnosis of mental disorders be uncoupled from a requirement for impairment or disability to foster a more vigorous research agenda on the etiologies courses and treatment of mental disorders as well as disabilities and to avert unintended consequences of delayed diagnosis

and treatment Examines the importance of culture in psychopathology and the main cultural variables at play in the diagnostic process stating that training present and future professionals in the need to include cultural factors in the diagnostic process is a logical step in any attempt to develop comprehensive research programs in psychology psychiatry and related disciplines This fascinating work with contributions from an international group of research investigators reaches into the core of psychiatry providing invaluable background and insights for all psychology and psychiatry professionals food for thought and further research that will be relevant for years to come

Revenge of the Windigo James Burgess Waldram, 2004-01-01

What is known about Aboriginal mental health and mental illness and on what basis is this knowing assumed This question while appearing simple leads to a tangled web of theory method and data rife with conceptual problems shaky assumptions and inappropriate generalizations It is also the central question of James Waldram's *Revenge of the Windigo* This erudite and highly articulate work is about the knowledge of Aboriginal mental health who generates it how it is generated and communicated and what has been and continues to be its implications for Aboriginal peoples To better understand how this knowledge emerged James Waldram undertakes an exhaustive examination of three disciplines anthropology psychology and psychiatry and reveals how together they have constructed a gravely distorted portrait of the Aboriginal Waldram continues this acute examination under two general themes The first focuses on how culture as a concept has been theorized and operationalized in the study of Aboriginal mental health The second seeks to elucidate the contribution that Aboriginal peoples have inadvertently made to theoretical and methodological developments in the three fields under discussion primarily as subjects for research and sources of data It is Waldram's assertion that despite the enormous amount of research undertaken on Aboriginal peoples researchers have mostly failed to comprehend the meaning of contemporary Aboriginality for mental health and illness preferring instead the reflection of their own scientific lens as the only means to properly observe measure assess and treat Using interdisciplinary methods the author critically assesses the enormous amount of information that has been generated on Aboriginal mental health deconstructs it and through this
