Persons Situations And Emotions An Ecological Approach:

Persons, Situations, and Emotions Hermann Brandstatter, Andrzej Elias, 2001-03-29 People's experience in their everyday lives has attracted much research interest in the past two decades. This book focuses on the interplay of temperament and other personality traits with characteristics of situations and events in hourly and daily mood fluctuations. All contributors used the Time Sampling Diary TSD in collecting data from a variety of populations over several weeks at least four times a day at randomly selected points of time. Part 1 of the book introduces the TSD technique with detailed instructions for data collection, coding, and analysis. Part 2 covers reports on a study of Polish bank employees. The chapters of Part 3 reflect the experience of dangerous work situations in a steel factory, the emotional adjustment of adolescents to short and long term unemployment, and the influences of husbands' daily or weekly commuting on their wives coping with housework and childcare. The chapters of Part 4 take a more philosophical approach to the material. The first contribution shows that personality traits influence well-being primarily in situations characterized by freedom of choice; the second introduces a rather new methodological approach, clarifying the affinities of situations and subjective experience.

Emotions Monica Greco, Paul Stenner, 2013-10-31 Are emotions becoming more conspicuous in contemporary life? Are the social sciences undergoing an affective turn? This Reader gathers influential and contemporary work in the study of emotion and affective life from across the range of the social sciences. Drawing on both theoretical and empirical research, the collection offers a sense of the diversity of perspectives that have emerged over the last thirty years from a variety of intellectual traditions. Its wide span and transdisciplinary character is designed to capture the increasing significance of the study of affect and emotion for the social sciences and to give a sense of how this is played out in the context of specific areas of interest. The volume is divided into four main parts: universals and particulars of affect; affect, political economies of affect; affect, power, and justice. Each main part comprises three sections dedicated to substantive themes, including emotions, history and civilization; emotions and culture; emotions, selfhood and identity; emotions and the media; emotions and politics; emotions, space and place, with a final section dedicated to themes of compassion, hate, and terror. Each of the twelve sections begins with an editorial introduction that contextualizes the readings and highlights points of comparison across the volume. Cross-national in content, the collection provides an introduction to the key debates, concepts, and modes of approach that have been developed by social scientists for the study of emotion and affective life. The Emotions of the Ancient Greeks David Konstan, 2007-12-22 It is generally assumed that whatever else has changed about the human condition since the dawn of civilization, basic human emotions—love, fear, anger, envy, shame—have remained constant. David Konstan, however, argues that the emotions of the ancient Greeks were in some significant respects different from our own and that recognizing these differences is important to understanding ancient Greek literature and culture. With *The Emotions of the Ancient Greeks*, Konstan reexamines the traditional assumption that the Greek terms designating the

emotions correspond more or less to those of today Beneath the similarities there are striking discrepancies References to Greek anger or love or envy for example commonly neglect the fact that the Greeks themselves did not use these terms but rather words in their own language such as *org* and *philia* and *phthonos* which do not translate neatly into our modern emotional vocabulary Konstan argues that classical representations and analyses of the emotions correspond to a world of intense competition for status and focused on the attitudes motives and actions of others rather than on chance or natural events as the elicitors of emotion Konstan makes use of Greek emotional concepts to interpret various works of classical literature including epic drama history and oratory Moreover he illustrates how the Greeks conception of emotions has something to tell us about our own views whether about the nature of particular emotions or of the category of emotion itself

Personality Traits Gerald Matthews,Ian J. Deary,Martha C. Whiteman,2009-10-29 Now in its third edition this dynamic textbook analyses the traits fundamental to human personality what they are why they matter their biological and social foundations how they play out in human life and their consequences for cognition stress and physical and mental health The text also considers the applications of personality assessment in clinical educational and occupational settings providing the reader with a detailed understanding of the whole field of personality traits This edition now with improved student features includes the latest research from behavioural genetics neuroscience social psychology and cognitive science assesses the impact of new research techniques like brain imagery and provides additional content on positive aspects of traits and practical uses of personality assessment This is an essential textbook for students taking courses in personality and individual differences and also provides researchers and practitioners with a coherent up to date survey of this significant area

Doing Care, Doing Citizenship Alessandro Pratesi,2017-11-27 This book examines the emotional micro situated dynamics of status inclusion exclusion that people produce while caring for others by focusing in particular on non conventional families Grounded in empirical research that involves different types of care and family contexts the book situates care within more inclusive and critical approaches while shedding light on its multiple and often overlooked meanings and implications Engaging and accompanied by a useful methodological appendix Doing Care Doing Citizenship is essential reading for students and academics of sociology psychology social work and social theory It will also be of interest to practitioners interested in developing their understanding of the relationship between care emotions social inclusion and citizenship

Handbook of Emotion Elicitation and Assessment James A. Coan,John J.B. Allen,2007-04-19 Emotion research has become a mature branch of psychology with its own standardized measures induction procedures data analysis challenges and sub disciplines During the last decade a number of books addressing major questions in the study of emotion have been published in response to a rapidly increasing demand that has been fueled by an increasing number of psychologists whose research either focus on or involve the study of emotion Very few of these books however have presented an explicit discussion of the tools for conducting research despite the facts that the study of emotion frequently

requires highly specialized procedures instruments and coding strategies and that the field has reached a place where a large number of excellent elicitation procedures and assessment instruments have been developed and validated Emotion Elicitation and Assessment corrects this oversight in the literature by organizing and detailing all the major approaches and instruments for the study of emotion It is the most complete reference for methods and resources in the field and will serve as a pragmatic resource for emotion researchers by providing easy access to a host of scales stimuli coding systems assessment tools and innovative methodologies This handbook will help to advance research in emotion by encouraging researchers to take greater advantage of standard and well researched approaches which will increase both the productivity in the field and the speed and accuracy with which research can be communicated

Who Needs Emotions? Jean-Marc Fellous, Michael A. Arbib, 2005-03-24 Designed by experts in neuroscience and artificial intelligence this book provides chapters that address questions concerning human and animal emotions and their possible analogs in the brains of robots It is intended for researchers and graduate students in neuroscience cognitive science psychology robotics and artificial intelligence

Handbook of Music and Emotion Patrik N. Juslin, John Sloboda, 2011-03-17 A successor to the acclaimed Music and Emotion The Handbook of Music and Emotion provides comprehensive coverage of the field in all its breadth and depth As well as summarizing what is currently known about music and emotion it will also stimulate further research in promising directions that have been little studied

Emotion in Memory and Development Jodi Quas, Robyn Fivush, 2009-04-09 The question of how well children recall and can discuss emotional experiences is one with numerous theoretical and applied implications Theoretically the role of emotions generally and emotional distress specifically in children s emerging cognitive abilities has implications for understanding how children attend to and process information how children react to emotional information and how that information affects their development and functioning over time Practically speaking increasing numbers of children have been involved in legal settings as victims or witnesses to violence highlighting the need to determine the extent to which children s eyewitness reports of traumatic experiences are accurate and complete In clinical contexts the ability to narrate emotional events is emerging as a significant predictor of psychological outcomes How children learn to describe emotional experiences and the extent to which they can do so coherently thus has important implications for clinical interventions

Memory and Emotion Daniel Reisberg, Paula Hertel, 2004 And lastly why is remembering a creative act that can and often does produce faulty memories of our experiences

BOOK JACKET Feelings James D. Laird, 2007-01-11 Feelings argues for the counter intuitive idea that feelings do not cause behavior but rather follow from behavior and are in fact the way that we know about our own bodily states and behaviors This point of view often associated with William James is called self perception theory Self perception theory can be empirically tested by manipulating bodily states and behaviors in order to see if the corresponding feelings are produced In this volume James D Laird presents hundreds of studies all demonstrating that feelings do indeed follow from

behavior Behaviors that have been manipulated include facial expressions of emotion autonomic arousal actions gaze and postures The feelings that have been induced include happiness anger fear romantic love liking disliking hunger and feelings of familiarity These feelings do not feel like knowledge because they are knowledge by acquaintance such as the knowledge we have of how an apple tastes rather than verbal knowledge by description such as the knowledge that apples are red round and edible Many professional theories of human behavior as well as common sense explain actions by an appeal to feelings as causes Laird argues to the contrary that if feelings are information about behaviors that are already ongoing feelings cannot be causes and that the whole mechanistic model of human behavior as caused in this sense seems mistaken He proposes an alternative cybernetic model involving hierarchically stacked control systems In this model feelings provide feedback to the control systems and in a further elaboration this model suggests that the stack of control systems matches a similar stack of levels of organization of the world An original contribution to the study of the relationship between feelings and behavior the volume will be of interest to social emotional and cognitive psychologists **Handbook of Research Methods for Studying Daily Life** Matthias R. Mehl, Tamlin S. Conner, 2013-10-01 Bringing together leading authorities this unique handbook reviews the breadth of current approaches for studying how people think feel and behave in everyday environments rather than in the laboratory The volume thoroughly describes experience sampling methods diary methods physiological measures and other self report and non self report tools that allow for repeated real time measurement in natural settings Practical guidance is provided to help the reader design a high quality study select and implement appropriate methods and analyze the resulting data using cutting edge statistical techniques Applications across a wide range of psychological subfields and research areas are discussed in detail **Appraisal Processes in Emotion** Klaus R. Scherer, Angela Schorr, Tom Johnstone, 2001-05-03 The scientific study of emotion has long been dominated by theories emphasizing the subjective experience of emotions and their accompanying expressive and physiological responses The processes by which different emotions are elicited has received less attention the implicit assumption being that certain emotions arise automatically in response to certain types of events or situations Such an assumption is incompatible with data showing that similar situations can provoke a range of emotions in different individuals or even the same individual at different times Appraisal theory first suggested by Magda Arnold and Richard Lazarus was formulated to address this shortcoming in our understanding of emotion The central tenet of appraisal theory is that emotions are elicited according to an individual's subjective interpretation or evaluation of important events or situations Appraisal research focuses on identifying the evaluative dimensions or criteria that predict which emotion will be elicited in an individual as well as linking the appraisal process with the production of emotional responses This book represents the first full scale summary of the current state of appraisal research Separate sections cover the history of appraisal theory and its fundamental ideas the views of some of the major theorists currently active in the field theoretical and methodological problems with the appraisal approach including

suggestions for their resolution social cultural and individual differences and the application of appraisal theory to understanding and treating emotional pathology and the methodology used in appraisal research including measuring and analyzing self report physiological facial and vocal indicators of appraisal and simulating appraisal processes via computational models Intended for advanced students and researchers in emotion psychology it provides an authoritative assessment and critique of the current state of the art in appraisal research

Emotion, Social Relationships, and Health Carol D. Ryff Professor of Psychology University of Wisconsin-Madison, Burton Singer Office of Population Research Princeton University, 2001-05-03 A growing literature in humans and animals documents linkages between social integration and affiliative relationships and a variety of health and disease outcomes including mortality The actual mechanisms through which these efforts occur are however not well understood Emotion likely plays a central role in mediating connections between relational experiences underlying neurobiological processes and health outcomes Many prior studies have focused on the size and proximity of social networks thereby neglecting their emotional features When studied emotion in social relationships has also been heavily weighted on the side of negative and conflicting interactions thus giving minimal attention to the possible protective benefits of enduring love nurturing and affection This volume brings together for the first time these differing lines of inquiry to advance understanding of how emotion in significant social relationships influences health The collection integrates knowledge from those with expertise in mapping the nature of emotional experience in human relations with those who are linking social ties to health outcomes and those who explicate underlying neurobiological mechanisms A main message of the book is that full explication of how emotion social relationships and health are woven together demands multidisciplinary inquiry To this end the volume brings together leading experts from fields of affective science clinical and social psychology epidemiology psychiatry psychoneuroimmunology psychoneuroendocrinology and health to promote the above synthesis Some address how to formulate observe and evaluate social interactions in clinical laboratory or daily life contexts Others link emotional experience in significant social relationships to health outcomes or intervening biological parameters Still others manipulate social environments or exposure to health challenge to assess impact on respiratory infections and immune function Collectively each contributes different pieces to the larger puzzle that connects emotion in social relationships to health Recurrent themes include the importance of attending to 1 both positive and negative emotional experience in significant social relationships and how they influence underlying mechanisms 2 cumulative emotional experience namely the repeated chronic nature of socioemotional experience both positive and negative 3 gender differences in how emotion in social relationships is experienced and how it effects underlying mechanisms involved in health outcomes and 4 the need for multiple methodologies to advance the emotion social relationships and health agenda

Emotion, Social Relationships, and Health Carol D. Ryff, Burton Singer, 2001 Papers and commentary from the 1997 Third Annual Wisconsin Symposium on Emotion delve into the nature of emotional

interaction with significant others and its role in illuminating the established ties between social relationships and health. Contributors from the fields of affective science, clinical and social psychology, epidemiology, psychoneuroimmunology, and health address how to observe and evaluate social interactions in clinical, laboratory, or daily life contexts and link emotional experience to health outcomes. Ryff teaches psychology at the University of Wisconsin. Singer is affiliated with the Office of Population Research. Annotation copyrighted by Book News, Inc., Portland, OR.

The Neuropsychology of Emotion Joan C. Borod, 2000-05-18. This volume represents a comprehensive overview of the neuropsychology of emotion and the neural mechanisms underlying emotional processing. It draws on recent studies utilizing behavioral paradigms with normal subjects, the brain lesion approach, clinical evaluations of patients with neurological and psychiatric disorders, and neuroimaging techniques. The book opens with an introduction summarizing each chapter and pointing to directions for future research. The first section is on history, the neuroanatomy and neurophysiology of emotion, and techniques that have been widely used to examine emotional processing, neuropsychological assessment, and neuroimaging. Theoretical perspectives on emotion are offered next, including psychological, social, cognitive, neurobiological, and neuropsychological models. A set of chapters on the neural substrates of emotion deals with a spectrum of emotional conditions: elation and mania, sadness and depression, anxiety and stress, anger and impulsivity, and apathy and flat affect. The book concludes with clinical implications, including a description of emotional deficits in neurological and psychiatric disorders, e.g., stroke, head injury, depression, and schizophrenia. Highlighted in this section is an overview of rehabilitative treatments and brain interventions for emotional processing deficits. This authoritative volume will be an important resource and text for neuropsychologists, clinical psychologists, speech language pathologists, neuroscientists, psychiatrists, neurologists, rehabilitation specialists, and their students and trainees.

What the Face Reveals Erika L. Rosenberg, Paul Ekman, 2020-06-15. For years, *What the Face Reveals* has been a singular collection of previously published original research using the Facial Action Coding System (FACS) to study facial behavior. Accompanying each article is an author commentary prepared for this book on the value of bringing FACS-based measurement to their area of study. The new third edition includes new research findings and applications and extends the focus of earlier volumes to showcase the development of Animal FACS systems and applications of automated FACS measurement. *What the Face Reveals* is an indispensable reference to anyone who uses FACS in their research, as the studies showcased here employ a variety of methodological and design techniques for the use of FACS that could be replicated or extended in other research contexts. New to this Edition: Revised to include 50% new contributions reflecting changes in facial measurement in the 21st century. New structure organized around six areas of FACS research: Animal FACS, Automated Measurement, Basic Affective Science, Development, Pain, Psychopathology, and Social and Health Psychology.

Handbook of Individual Differences in Cognition Aleksandra Gruszka, Gerald Matthews, Blazej Szymura, 2010-06-16. As cognitive models of behavior continue to evolve, the mechanics of cognitive exceptionalities, with its range of individual variations, in

Collective Emotions Christian von Scheve, Mikko Salmella, 2014-01-30 Although collective emotions have a long tradition in scientific inquiry for instance in mass psychology and the sociology of rituals and social movements their importance for individuals and the social world has never been more obvious than in the past decades The Arab Spring revolution the Occupy Wall Street movement and mass gatherings at music festivals or mega sports events clearly show the impact collective emotions have both in terms of driving conflict and in uniting people But these examples only show the most obvious and evident forms of collective emotions Others are more subtle although less important shared moods emotional atmospheres and intergroup emotions are part and parcel of our social life Although these phenomena go hand in hand with any formation of sociality they are little understood Moreover there still is a large gap in our understanding of individual emotions on the one hand and collective emotional phenomena on the other hand This book presents a comprehensive overview of contemporary theories and research on collective emotions It spans several disciplines and brings together for the first time various strands of inquiry and up to date research in the study of collective emotions and related phenomena In focusing on conceptual theoretical and methodological issues in collective emotion research the volume narrows the gap between the wealth of studies on individual emotions and inquiries into collective emotions The book catches up with a renewed interest into the collective dimensions of emotions and their close relatives for example emotional climates atmospheres communities and intergroup emotions This interest is propelled by a more general increase in research on the social and interpersonal aspects of emotion on the one hand and by trends in

philosophy and cognitive science towards refined conceptual analyses of collective entities and the collective properties of cognition on the other hand The book includes sections on Conceptual Perspectives Collective Emotion in Face to Face Interactions The Social Relational Dimension of Collective Emotion The Social Consequences of Collective Emotions Group Based and Intergroup Emotion Rituals Movements and Social Organization and Collective Emotions in Online Social Systems Including contributions from psychologists philosophers sociologists and neuroscience this volume is a unique and valuable contribution to the affective sciences literature
