**Foreign Aid: New Perspectives** K. L. Gupta, 2012-12-06 Foreign aid has been an area of active scholarly investigation since the end of the Second World War but particularly since the early 1950s when a large number of the erstwhile colonies became independent Few areas of public policy involving the developed and developing countries have aroused more passion and ideological debate than foreign aid In spite of the massive amount of research in the field there is still not enough work in two areas the first involves the mechanisms through which aid influences the economies of the donor and the recipient countries and the second country specific assessments of the effectiveness of foreign aid Foreign Aid New Perspectives is aimed at making a contribution in these two areas The contents of this volume are divided into four parts Part I deals with some theoretical aspects of foreign aid while the second part analyzes some general policy aspects Part III turns to the donor experience and includes one paper on the Danish experience The last part considers the recipient experience and consists of five case studies

**Evolution from a Thermodynamic Perspective** Carl F Jordan, 2021-11-26 Survival of the fittest is a tautology because those that are fit are the ones that survive but to survive a species must be fit Modern evolutionary theory avoids the problem by defining fitness as reproductive success but the complexity of life that we see today could not have evolved based on selection that favors only reproductive ability There is nothing inherent in reproductive success alone that could result in higher forms of life Evolution from a Thermodynamic Perspective presents a non circular definition of fitness and a thermodynamic definition of evolution Fitness means maximization of power output necessary to survive in a competitive world Evolution is the storage of entropy Entropy storage means that solar energy instead of dissipating as heat in the Earth is stored in the structure of living organisms and ecosystems Part one explains this in terms comprehensible to a scientific audience beyond biophysicists and ecosystem modelers Part two applies thermodynamic theory in non esoteric language to sustainability of agriculture and to

conservation of endangered species While natural systems are stabilized by feedback agricultural systems remain in a mode of perpetual growth pressured by balance of trade and by a swelling population The constraints imposed by thermodynamic laws are being increasingly felt as economic expansion destabilizes resource systems on which expansion depends **Crop**

**Stress and its Management: Perspectives and Strategies** B. Venkateswarlu, Arun K. Shanker, Chitra Shanker, M. Maheswari, 2011-11-22 Crops experience an assortment of environmental stresses which include abiotic viz drought water logging salinity extremes of temperature high variability in radiation subtle but perceptible changes in atmospheric gases and biotic viz insects birds other pests weeds pathogens viruses and other microbes The ability to tolerate or adapt and overwinter by effectively countering these stresses is a very multifaceted phenomenon In addition the inability to do so which renders the crops susceptible is again the result of various exogenous and endogenous interactions in the ecosystem Both biotic and abiotic stresses occur at various stages of plant development and frequently more than one stress concurrently affects the crop Stresses result in both universal and definite effects on plant growth and development One of the imposing tasks for the crop researchers globally is to distinguish and to diminish effects of these stress factors on the performance of crop plants especially with respect to yield and quality of harvested products This is of special significance in view of the impending climate change with complex consequences for economically profitable and ecologically and environmentally sound global agriculture The challenge at the hands of the crop scientist in such a scenario is to promote a competitive and multifunctional agriculture leading to the production of highly nourishing healthy and secure food and animal feed as well as raw materials for a wide variety of industrial applications In order to successfully meet this challenge researchers have to understand the various aspects of these stresses in view of the current development from molecules to ecosystems The book will focus on broad research areas in relation to these stresses which are in the forefront in contemporary crop stress research **Food Safety and Foodborne Pathogen - A Global Perspective on the Diversity, Combating Multidrug**

**Resistance and Management** Learn-Han Lee, Om V. Singh, Nurul-Syakima Ab Mutalib, Marta López, 2020-12-11 A question raised by many individuals today How Safe is Our Food Consumed Today Food safety has become a hot topic and an important public issue due to the increasingly widespread nature of foodborne illnesses in both developed and developing countries As food is biological in nature and supplies consumers with nutrients it is also equally capable of supporting the growth of microorganisms from the environmental sources A precise method of monitoring and detecting of foodborne pathogens including Salmonella sp Vibrio sp Listeria monocytogenes Campylobacter and Norovirus is needed to prevent and control human foodborne infections Clinical treatments of infection caused by foodborne pathogens are becoming tougher with the increase number of multidrug resistant pathogens in the environment This situation creates a huge healthcare burden e g prolonged treatment for infections decrease in the efficacy of antibiotic delay in treatment due to unavailability of new antibiotics and increased number of deaths As such continuous investigation of the foodborne pathogens is needed to

pave the way for a deeper understanding on the foodborne diseases and to improve disease prevention management and treatments
