AQUATOX (Release 2) modeling environmental fate and ecological effects in aquatic ecosystems volume 2 technical documentation. ,2004 **Aquatic Toxicology and Environmental Fate** T. M. Poston, Rich Purdy, 1986 **Publications by the Staff of the Great Lakes Environmental Research Laboratory, April 1974-March 1985** Eugene James Aubert, 1985 Uncertainty and Forecasting of Water Quality M.B. Beck, G. van Straten, 2012-12-06 Since the International Institute for Applied Systems Analysis began its study of water quality modeling and management in 1977 it has been interested in the relations between uncertainty and the problems of model calibration and prediction The work has focused on the theme of modeling poorly defined environmental systems a principal topic of the effort devoted to environmental quality control and management Accounting for the effects of uncertainty was also of central concern to our two case studies of lake eutrophication management one dealing with Lake Balaton in Hungary and the other with several Austrian lake systems Thus in November 1979 we held a meeting at Laxenburg to discuss recent methodological developments in addressing problems associated with uncertainty and forecasting of water quality This book is based on the proceedings of that meeting The last few years have seen an increase in awareness of the issue of uncertainty in water quality and ecological modeling This book is relevant not only to contemporary issues but also to those of the future A lack of field data will not always be the dominant problem for water quality modeling and management more sophisticated measuring techniques and more comprehensive monitoring networks will come to be more widely applied Rather the important problems of the future are much more likely to emerge from the enhanced facility of data processing and to concern the meaningful interpretation assimilation and use of the information thus obtained *Perspectives on Lake Ecosystem Modelling* D. Developments in Environmental Modelling S.E. Jorgensen, M.J. Gromiec, 2016-04-20 The use of models to assess water quality is becoming increasingly important worldwide In order to be able to develop a good model it is necessary to have a good quantitative and ecological description of physical chemical and biological processes in ecosystems Such descriptions may be called submodels This book presents the most important but not all submodels applied in water quality modelling Each chapter deals with a specific physical process and covers its importance the most applicable submodels and how to select one parameter values and their determination and future research needs The book will be an excellent reference source for environmental engineers ecological modellers and all those interested in the modelling of water quality systems **Ecological Research Series** ,1979 **EPA-600/3** ,1979-10 *IFYGL--the International Field Year for the Great Lakes* Eugene James Aubert, T.
