Perspectives on Tsunami Hazard Reduction: Observations, Theory and Planning Gerald T. Hebenstreit, 2013-03-09 The promontory of Gargano in the southern Adriatic Sea represents one of the most interesting Italian coastal zones subjected to tsunami hazard Figure 1a gives the geographical map of Italy with a box embracing the region of Gargano details of that region are in turn sketched in Figure 1b Because of the incompleteness of the earthquake and tsunami catalogues no reports on tsunamis in this area are available prior to 1600 AD The Gargano events have been recently revised in order to establish their reliability and to attain the phenomenological reconstruction of the tsunamis Guidoboni and Tinti 1987 and 1988 Tinti et al 1995 This work fits the general purpose of assessing tsunami hazard along the Italian coasts and represents a continuation of a previous study where the first quantitative description of the 1627 tsunami from a numerical modeling viewpoint was performed Tinti and Piatanesi 1996 The earthquake took place on 30 July 1627 about mid day and was followed by four large aftershocks It claimed more than 5 000 victims and destroyed completely numerous villages in the northern Gargano area with the most severe damage located between S Severo and Lesina The earthquake excited a tsunami with the most impressive effects in proximity of the Lesina Lake where the most reliable contemporary chronicles report about an initial sea water withdrawal of about 2 miles and a subsequent penetration inland

Governing Environment Sanjay Sharma, 2016-04-26 This book comparatively analyses the federal policies and financing of India and Canada It examines whether federalism as a system of governance is better suited to deal with environmental questions It operates from the assumption that federalism can provide an effective solution to the emerging concerns of the environment because it essentially provides a model of disaggregated governance without any extensive and intrusive mark of hierarchy It presents a uniquely exploration of environmental governance from this hitherto under researched perspective and simultaneously in order to provide a better conceptual understanding examines the different theories of federalism and modes of distribution of powers authorities and functions Given their symmetrical federal experiences India and Canada naturally qualify as the domain of study with both being known as twin federal nations Issues of environment have been factorised and classified according to their critical significance in terms of policy choices The combinatorial structure has been evaluated in terms of better federal management of environment In the process many new dimensions of federalism and environment have emerged which may contribute to the critical mass of knowledge on the subject This book makes a departure from the general mono construction of the environment as a restricted unit of knowledge available only to a specialist Broadly following an interdisciplinary logic of formation of idea this study is highly relevant in generating a new perspective on environmental research It defines environment as a system which requires careful redrafting and reworking of three structures of relationships namely between man and environment between

resource community and the state and between inter governmental contestations

*Tsunami Research at the End of a Critical Decade* Gerald T. Hebenstreit, 2013-03-14 This volume derived from the 1999 International Tsunami Symposium presents a unique look at the state of tsunami research at the end of the 20th century It displays recent progress both in data recovery and reconstructions of historical tsunamis and in detail examination of recent disasters It shows the tsunami community using both traditional methods of data gathering searching archives and attempting to simulate past events and integrating modern technologies side scan sonar GPS global communications supercomputers in the quest to understand tsunamis and improve mankind's ability to mitigate the disastrous consequences of these unpredictable and unstoppable events It chronicles recent advances in mitigation efforts while illuminating the continuing need for increased efforts The papers range from descriptive texts for the non specialists to fairly technical discussions for those familiar with tsunami research Audience This book will be of interest to researchers and graduate students involved in natural hazards research physical oceanography seismology environmental impact assessment and risk assessment

**Tsunamis** Horace M. Karling, 2005 The phenomenon called a tsunami soo NAHmee is a series of travelling ocean waves of extremely long length generated primarily by earthquakes occurring below or near the ocean floor Underwater volcanic eruptions and landslides can also generate tsunamis In the deep ocean the tsunami waves propagate across the deep ocean with a speed exceeding 800 kilometres per hour km 500 miles per hour and a wave height of only a few tens of centimetres 1 foot or less Tsunami waves are distinguished from ordinary ocean waves by their great length between wave crests often exceeding a 100 km 60 miles or more in the deep ocean and by the time between these crests ranging from 10 minutes to an hour As they reach the shallow waters of the coast the waves slow down and the water can pile up into a wall of destruction tens of meters 30 ft or more in height The effect can be amplified where a bay harbour or lagoon funnels the wave as it moves inland Large tsunamis have been known to rise over 30 meters 100 ft Even a tsunami 3 6 meters m high can be very destructive and cause many deaths and injuries near the ocean During the 1990s over 4 000 people were killed by 10 tsunamis including more than 1000 lives lost in the 1992 Flores region Indonesia and 2200 lives in the 1998 Aitape Papua New Guinea tsunamis Property damage was nearly one billion United States US dollars Although 80 per cent of the tsunamis occur in the Pacific they can also threaten coastlines of countries in other regions including the Indian Ocean Mediterranean Sea Caribbean region and even the Atlantic Ocean
