Brain and Behavior in Child Psychiatry Aribert Rothenberger, 2012-12-06

The Brain What Else All senses are connected with the brain From sense perception derives knowledge In the brain is the sovereignty of the mind Mind is interpreted by the brain Alcmaeon of Croton 5th Century B c The ground is shifting under the traditional approaches to problems in the philosophy of mind Earlier doctrines concerning the independence of cognition from the brain now appear untenable P S Churchland 20th Century A D It is not objective of this volume to discuss the history and significance of neuroscience for philosophy from a developmental perspective although this would be a rather interesting topic Its object is the relationship between brain and behavior in children as exhibited by higher mental functions e g speech and language reasoning perception free will and control of motor acts dependence of behavior on neuronal constraints the self of the child and therapeutic activities Child psychiatrists commonly allude to the brain as the site of disturbance responsible for many developmental disabilities and psychopathological syndromes identifiable by observing behavior e g dyslexia delusions neurological examination e g soft signs psychological test performance e g Bender Gestalt Test EEG e g alpha theta ratio and CCT e g pseudoatrophy While there is nothing inherently wrong with such inferences the fact is frequently overlooked that there is no specific set of brain behavior relationships validating these inferences

Application of Basic Neuroscience to Child Psychiatry S.I. Deutsch, A. Weizman, R. Weizman, 2012-12-06 The idea for this book developed during the course of several discussions among the editors while we were working together as staff scientists in the laboratories of the Clinical Neuro science Branch of the National Institute of Mental Health It was a happy coincidence that the three of us child psychiatrists with predominantly clinical interests selected a collaborative bench research project involving neurotransmitter receptor characterization and regulation We appreciated the relevance of our work to child

psychiatry and wished for a forum to share the excitement we enjoyed in the laboratory with our clinical colleagues Moreover it seemed to us that much of the pharmacological research in child psychiatry proceeded on an empirical basis often without a compelling neurochemical rationale This could reflect the paucity of neurochemical data that exists in child psychiatry and the very limited understanding of the pathophysiology in most psychiatric disorders that occur in childhood Also we bemoaned the fact that there was a virtual absence of meaningful interchange between clinical investigators in child psychiatry and their colleagues in the neurosciences We believed that an edited book appealing to clinicians and basic scientists could serve as an initial effort to foster interchange between them The editors wish to emphasize that this book is viewed as only a beginning in the process of interchange that must take place
