biological chemistry      *Introduction to Modern Inorganic Chemistry, 6th edition* R.A. Mackay, W. Henderson, 2017-12-21  
 This popular and comprehensive textbook provides all the basic information on inorganic chemistry that undergraduates need to know. For this sixth edition, the contents have undergone a complete revision to reflect progress in areas of research, new and modified techniques, and their applications, and use of software packages. *Introduction to Modern Inorganic Chemistry* begins by explaining the electronic structure and properties of atoms, then describes the principles of bonding in diatomic and polyatomic covalent molecules, the solid state, and solution chemistry. Further on in the book, the general properties of the periodic table are studied along with specific elements and groups, such as hydrogen, the s elements, the lanthanides, the actinides, the transition metals, and the p block. Simple and advanced examples are mixed throughout to increase the depth of students' understanding. This edition has a completely new layout, including revised artwork, case study boxes, technical notes, and examples. All of the problems have been revised and extended and include notes to assist with approaches and solutions. It is an excellent tool to help students see how inorganic chemistry applies to medicine, the environment, and biological topics.

*Redox-Active Ligands* Marine Desage-El Murr, 2024-02-05  
 Authoritative resource showcasing a new family of ligands that can lead to better catalysts and promising applications in organic synthesis. *Redox Active Ligands* gives a comprehensive overview of the unique features of redox active ligands, describing their structure and synthesis, the characterization of their coordination complexes, and important applications in homogeneous catalysis. The work reflects the diversity of the subject by including ongoing research spanning coordination chemistry, organometallic chemistry, bioinspired catalysis, proton and electron transfer, and the ability of such ligands to interact with early and late transition metals, lanthanides, and actinides. The book is divided into three parts devoted to introduction and concepts, applications, and case studies. After the introduction on key concepts related to the field and the different types of ligands and complexes in which ligand-centered redox activity is commonly observed, mechanistic and computational studies are described. The second part focuses on catalytic applications of redox active complexes, including examples from radical transformations, coordination chemistry, and organic synthesis. Finally, case studies of redox active guanidine ligands and of lanthanides and actinides are presented. Other specific sample topics covered include: An overview of the electronic features of redox active ligands, covering their historical perspective and biological background; The versatility and mode of action of redox active ligands, which sets them apart from more classic and tunable ligands such as phosphines or N-heterocyclic carbenes; Preparation and catalytic applications of complexes of stable N-aryl radicals; Metal complexes with redox active ligands in H<sub>2</sub> transfer transformations. By providing up-to-date information on important concepts and applications, *Redox Active Ligands* is an essential reading for researchers working in organometallic and coordination chemistry, catalysis, organic synthesis, and bioinorganic chemistry, as well as newcomers to the field.
