Perspectives In Ethology:

Perspectives in Ethology P.P.G Bateson, Paul Patrick Gordon Bateson, P.H. Klopfer, 1989-01-31 Nine chapters on diverse topics that include an analysis of whether sociobiology has killed ethology or revitalized it aims limitations and the future of ethology and comparative ethology the tyranny of anthropocentrism psychoimmunology gender differences in behavior behavioral development

Perspectives in Ethology P. Bateson, 2012-04-24 In the early days of ethology most of the major developments were in the realm of ideas and in the framework in which animal behavior was studied Much of the evidence was anecdotal much of the thinking intuitive As the subject developed theories had to be tested language had to become more public than it had been and quantitative descriptions had to replace the preliminary qualitative accounts That is the way a science develops hard headed analysis follows soft headed synthesis There are limits though to the usefulness of this trend The requirement to be quantitative can mean that easy measures are chosen at the expense of representing the complexly patterned nature of a phenomenon All too easily the process of data collection becomes a trivial exercise in describing the obvious or the irrelevant Editors and their referees require authors to maintain high standards of evidence and avoid undue speculation in short to maintain professional respectability In the main this process is admirable and necessary but somewhere along the line perspective is lost and a body of knowledge with all the preconceptions and intellectual baggage that comes with it becomes formally established New ideas are treated as though they were subversive agents as indeed they often are

Perspectives in Ethology P. Bateson, 2013-06-29 In the preface to the first volume of this series we set out our aims which were to encourage fresh perspectives in ethology and provide a forum for new ideas We still feel that in the perfectly proper search for high standards of evidence methodology has tended to remain the master rather than the servant of most aspects of ethological work It is easy for us all to forget that the kinds of data we collect are largely determined by the kinds of questions we ask Even an ethologist with the professed goal of providing a straightforward account of behavior must incorporate into his or her descriptions a great many assumptions about the organization of that behavior Inevitably some facets of what went on will have been selected at the expense of others This is sometimes done for example in the service of a theory that the fundamental unit for description is the fixed action pattern Our point is not that constraints on the collection of data are bad but that the theory which gives rise to the selection of evidence should not be neglected In the first volume the choice of topics and authors was based upon our views about the exciting or developing issues in ethology This volume represents a more opportunistic approach the articles were selected from among the many offered to us as best conforming to our aims Nevertheless certain themes do emerge

Perspectives in Ethology N.S. Thompson, 1995-05-31 A book rich and various in ideas and substance It belongs on the shelf of anyone wanting to keep up with what is happening in ethology Bioscience from a review of an earlier volume Beginning with Volume 11 Nicholas S Thompson takes over the editorship of this

remarkable series For this volume contributors bring fresh perspectives to the subject of natural design **Perspectives in Ethology** Paul Patrick Gordon Bateson, Peter H. Klopfer, 1981 One of the attractive features of the great classical ethologists was their readiness to ask different kinds of questions about behavior and to do so without muddling the answers Niko Tinbergen for instance was interested in the evolution of behavior But he also had interests in the present day survival value of a behavior pattern and in the mechanisms that control it from moment to moment Broad as his interests were he clearly separated out the problems and recognized that questions about the history function control and development of behavior require distinct approaches even though the answers to one type of question may aid in finding answers to another The open minded and clear headed style of ethologists like Tinbergen was based on a recognition that there are diverse ways of usefully conducting research on behavior This consciousness has been partially sub merged in recent years by new waves of narrowly focused enthusiasm For instance the study of the behavior of whole animals without recourse to lower levels of analysis and the treatment of sociobiological theories as explanation for how individuals develop has meant that the relatively fragile plants of neuroethology and behavioral ontogeny have almost disappeared under the flood **Perspectives in Ethology** P.P.G. Bateson, Peter H. Klopfer, 2013-06-29 This volume is subtitled Alternatives because we wanted to devote at least a part of it to the alternative ways in which members of the same species behave in a given situation Not so very long ago the supposition among many ethologists was that if one animal behaved in a particular way then all other members of the same age and sex would do the same Any differences in the ethogram between individuals were to be attributed to normal biological variation Such thinking is less common nowadays after the discovery of dramatic differences between members of the same species which are of the same age and sex Alternative modes of behavior though now familiar raise particularly interesting questions about current function evolutionary history and mechanism Do the differences represent equally satisfactory solutions to a given problem Are some of the solutions the best that those animals can do given their body size and general condition Is an alternative solution adopted because so many other individuals have taken the first If so do the frequencies reached at equilibrium depend on differential survival of genetically distinct types or do they result from decisions taken by individual animals If the alternatives are induced during development as are the castes of social insects what is required for such triggering The questions about alternative ways of behaving are addressed in some of the chapters in this volume *Perspectives in Ethology* Nicholas S. Thompson, François Tonneau, 2001-01-31 The relations between behavior evolution and culture have been a subject of vigorous debate since the publication of Darwin's *The Descent of Man* 1871 The latest volume of *Perspectives in Ethology* brings anthropologists ethologists psychologists and evolutionary theorists together to reexamine this important relation With two exceptions the essays by Brown and Eldredge all of the present essays were originally presented at the Fifth Biannual Symposium on the Science of Behavior held in Guadalajara Mexico in February 1998 The volume opens with the problem of the origins of culture tackled from two different viewpoints

by Richerson and Boyd and Lancaster Kaplan Hill and Hurtado respectively Richerson and Boyd analyze the possible relations between climatic change in the Pleistocene and the evolution of social learning evaluating the boundary conditions under which social learning could increase fitness and contribute to culture Lancaster Kaplan Hill and Hurtado examine how a shift in the diet of the genus Homo toward difficult to acquire food could have determined or coevolved with unique features of the human life cycle These two essays illustrate how techniques that range from computer modeling to comparative behavioral analysis and that make use of a wide range of data can be used for drawing inferences about past selection pressures As culture evolves it must somehow find its place within and also affect a complex hierarchy of behavioral and biological factors

Perspectives in Ethology P.P.G. Bateson, P.H. Klopfer, N.S. Thompson, 1993-09-30 The current volume focuses on behavioral similarities and differences within individual animals larger populations and species as a whole Research from ecological social ontogenetic physiological and other perspectives is presented to explicate specific behaviors as well as to provide a more profound understanding of how behavior work influences thought about evolutionary processes

in Ethology P. Bateson, 2013-03-13 When we began this series we wanted to encourage imaginative thinking among ethologists and those working in related fields By the time we had reached Volume 3 we were advised by our publishers to give each volume a theme Although we accepted the advice it ran somewhat counter to our own wish to give our authors full rein It also meant that we could not accept submitted manuscripts if they lay too far outside the topic for the next volume We did however cheat a little and faithful followers of the series will have noticed that some of the contributions were not exactly on the stated theme Anyway our publishers have now agreed that we can make honest people of ourselves by once again ac

cepting a broad range of manuscripts for any volume We shall also solicit manuscripts on particular topics that seem to be timely and appropriate and each volume will continue to have a subtitle that relates to the theme of the majority of the papers in the volume We hope that with our more permissive policy now explicit potential contributors will feel encouraged to submit manuscripts to either of us at the addresses given at the end of this Preface When planning the present volume we wanted our contributors to build bridges between studies of behavior and the neurosciences In recent years the majority of people working on behavior seem to have been exclusively concerned with functional and evolutionary approaches
