Perspectives and Problems in Nonlinear Science Ehud Kaplan, Jerrold E. Marsden, Katepalli R. Sreenivasan, 2012-12-06 Lawrence Sirovich will turn seventy on March 1 2003 Larry's academic life of over 45 years at the Courant Institute Brown University Rockefeller University and the Mount Sinai School of Medicine has touched many people and several disciplines from fluid dynamics to brain theory His contributions to the kinetic theory of gases methods of applied mathematics theoretical fluid dynamics hydrodynamic turbulence the biophysics of vision and the dynamics of neuronal populations represent the creative work of an outstanding scholar who was stimulated mostly by insatiable curiosity As a scientist Larry has consistently offered fresh outlooks on classical and difficult subjects and moved into new fields effortlessly He delights in what he knows and does and sets no artificial boundaries to the range of his inquiry Among the more than fifty or so Ph D students and post docs that he has mentored many continue to make first rate contributions themselves and hold academic positions in the US and elsewhere Larry's scientific collaborators are numerous and distinguished Those of us who have known him well will agree that Larry's charm above all is his taste wit and grace under fire Larry has contributed immensely to mathematics publishing He began his career with Springer by founding the Applied Mathematical Sciences series together with Fritz John and Joe LaSalle some 30 years ago Later he co-founded the Texts in Applied Mathematics series and more recently the Interdisciplinary Applied Mathematics series

Statistical Methods and Applications from a Historical Perspective Fabio Crescenzi, Stefania Mignani, 2014-06-19 The book showcases a selection of peer reviewed papers the preliminary versions of which were presented at a conference held 11-13 June 2011 in Bologna and organized jointly by the Italian Statistical Society SIS the Institute National Institute of Statistics ISTAT and the Bank of Italy The theme of the conference was Statistics in the 150 years of the Unification of Italy The celebration of the anniversary of Italian unification provided the opportunity to examine and discuss the methodological aspects and applications from a historical perspective and both from

a national and international point of view The critical discussion on the issues of the past has made it possible to focus on recent advances considering the studies of socio economic and demographic changes in European countries

Perspectives In Mathematical Science II: Pure Mathematics N S Narasimha Sastry, Mohan Delampady, B Rajeev, T S S R K Rao, 2009-07-01 This book presents a collection of invited articles by distinguished Mathematicians on the occasion of the Platinum Jubilee Celebrations of the Indian Statistical Institute during the year 2007 These articles provide a current perspective of different areas of research emphasizing the major challenging issues Given the very significant record of the Institute in research in the areas of Statistics Probability and Mathematics distinguished authors have very admirably responded to the invitation Some of the articles are written keeping students and potential new entrants to an area of mathematics in mind This volume is thus very unique and gives a perspective of several important aspects of mathematics

Perspectives on Big Data Analysis S. Ejaz Ahmed, 2014-08-20 This volume contains the proceedings of the International Workshop on Perspectives on High dimensional Data Analysis II held May 30 June 1 2012 at the Centre de Recherches Mathématiques Université de Montréal Montréal Quebec Canada This book collates applications and methodological developments in high dimensional statistics

dealing with interesting and challenging problems concerning the analysis of complex high dimensional data with a focus on model selection and data reduction The chapters contained in this book deal with submodel selection and parameter estimation for an array of interesting models The book also presents some surprising results on high dimensional data analysis especially when signals cannot be effectively separated from the noise it provides a critical assessment of penalty estimation when the model may not be sparse and it suggests alternative estimation strategies Readers can apply the suggested methodologies to a host of applications and also can extend these methodologies in a variety of directions This volume conveys some of the surprises puzzles and success stories in big data analysis and related fields This book is co published with the Centre de Recherches Math matiques Past, Present, and Future of Statistical Science Xihong Lin,Christian Genest,David L. Banks,Geert Molenberghs,David W. Scott,Jane-Ling Wang,2014-03-26 Past Present and Future of Statistical Science was commissioned in 2013 by the Committee of Presidents of Statistical Societies COPSS to celebrate its 50th anniversary and the International Year of Statistics COPSS consists of five charter member statistical societies in North America and is best known for sponsoring prestigious awards in stat Principles Of Statistical Inference From A Neo-fisherian Perspective Luigi Pace,Alessandra Salvan,1997-08-05 In this book an integrated introduction to statistical inference is provided from a frequentist likelihood based viewpoint Classical results are presented together with recent developments largely built upon ideas due to R A Fisher The term neo Fisherian highlights this After a unified review of background material statistical models likelihood data and model reduction first order asymptotics and inference in the presence of nuisance parameters including pseudo likelihoods a self contained introduction is given to exponential families exponential dispersion models generalized linear models and group families Finally basic results of higher order asymptotics are introduced index notation asymptotic expansions for statistics and distributions and major applications to likelihood inference The emphasis is more on general concepts and methods than on regularity conditions Many examples are given for specific statistical models Each chapter is supplemented with problems and bibliographic notes This volume can serve as a textbook in intermediate level undergraduate and postgraduate courses in statistical inference Statistics in the Environmental Sciences Steven M. Gertz,American Society for Testing and Materials,Roy F. Weston,1984 Chaos: A Statistical Perspective Kung-Sik Chan,Howell Tong,2013-03-09 It was none other than Henri Poincare who at the turn of the last century recognised that initial value sensitivity is a fundamental source of random ness For statisticians working within the traditional statistical framework the task of critically assimilating randomness generated by a purely de terministic system often known as chaos is an intellectual challenge Like some other statisticians we have taken up this challenge and our curiosity as reporters and participants has led us to investigate beyond the earlier discoveries in the field Earlier statistical work in the area was mostly con cerned with the estimation of what is sometimes imprecisely called the fractal dimension During the different stages of our writing substantial portions of the book were used in lectures and seminars

These include the DMV German Mathematical Society Seminar Program the inaugural session of lectures to the Crisis Points Project at the Peter Wall Institute of Advanced Studies University of British Columbia and the graduate courses on Time Series Analysis at the University of Iowa the University of Hong Kong the London School of Economics and Political Science and the Chinese University of Hong Kong We have therefore benefitted greatly from the comments and suggestions of these audiences as well as from colleagues and friends We are grateful to them for their contributions Our special thanks go to Colleen Cutler Cees Diks Barbel FinkensHidt Cindy Greenwood Masakazu Shimada Floris Takens and Qiwei Yao

Statistical Methods in Psychiatry and Related Fields Ralitzia Gueorguieva, 2017-11-20 Data collected in psychiatry and related fields are complex because outcomes are rarely directly observed there are multiple correlated repeated measures within individuals there is natural heterogeneity in treatment responses and in other characteristics in the populations Simple statistical methods do not work well with such data More advanced statistical methods capture the data complexity better but are difficult to apply appropriately and correctly by investigators who do not have advanced training in statistics This book presents at a non technical level several approaches for the analysis of correlated data mixed models for continuous and categorical outcomes nonparametric methods for repeated measures and growth mixture models for heterogeneous trajectories over time Separate chapters are devoted to techniques for multiple comparison correction analysis in the presence of missing data adjustment for covariates assessment of mediator and moderator effects study design and sample size considerations The focus is on the assumptions of each method applicability and interpretation rather than on technical details Features Provides an overview of intermediate to advanced statistical methods applied to psychiatry Takes a non technical approach with mathematical details kept to a minimum Includes lots of detailed examples from published studies in psychiatry and related fields Software programs data sets and output are available on a supplementary

website The intended audience are applied researchers with minimal knowledge of statistics although the book could also benefit collaborating statisticians The book together with the online materials is a valuable resource aimed at promoting the use of appropriate statistical methods for the analysis of repeated measures data Ralitzza Gueorguieva is a Senior Research Scientist at the Department of Biostatistics Yale School of Public Health She has more than 20 years experience in statistical methodology development and collaborations with psychiatrists and other researchers and is the author of over 130 peer reviewed publications

Applied Bayesian Statistical Studies in Biology and Medicine M. di Bacco, G. d'Amore, F. Scalfari, 2013-12-01 It was written on another occasion that It

is apparent that the scientific culture of one means production of scientific papers is growing exponentially and chaotically in almost every field of investigation. The biomedical sciences *sensu lato* and mathematical statistics are no exceptions. One might say then and with good reason that another collection of bio-statistical papers would only add to the overflow and cause even more confusion. Nevertheless, this book may be greeted with some interest if we state that most of the papers in it are the result of a collaboration between biologists and statisticians and partly the product of the Summer School in Statistical Inference in Human Biology which reaches its 10th edition in 2003. Information about the School can be obtained at the Web site http://www2.stat.unibo.it/leventi/Sito_scuolaindex.htm is common experience and not only. This is rather important. Indeed, it is in Italy that encounters between statisticians and researchers are sporadic and hasty. This is not the place to justify this statement which may sound too severe as this preface would become much too long. It is sufficient to point out that very often whoever introduces young biologists and medical doctors to inductive reasoning about data either does not have a real interest in the concrete and specific meaning of the data or if interested does not have a solid statistical background. In other words, he is usually a theoretical statistician or a biological or medical technician.
