UML 2002 - The Unified Modeling Language: Model Engineering, Concepts, and Tools Jean-Marc Jezequel, Heinrich Hussman, Stephen Cook, 2003-08-02 Five years on from its adoption in 1997 by the Object Management Group OMG the Unified Modeling Language is the de facto standard for creating agrammatic models of software systems More than 100 books have been written about UML and it is taught to students throughout the world The definition of UML version 2 is well under way and should be largely completed within the year This will not only improve and enhance UML itself including standard facilities for diagram interchange but also make it fully integrated with other modeling technologies from the OMG such as Meta Object Facility MOF and XML

Metadata Interchange XMI The Object Constraint Language which has become an important vehicle for communicating detailed insights between UML researchers and practitioners will have a much expanded specification and be better integrated with the UML The popularity of UML signifies the possibility of a shift of immense proportions in the practice of software development at least comparable to the shift from the use of assembly language to third generation or high level programming languages We dream of describing the behavior of software systems in terms of models closely related to the needs of the enterprise being served and being able to routinely translate these models automatically into executing programs on distributed computing systems The OMG is promoting Model Driven Architecture MDA as a significant step towards this vision and the MDA concept has received considerable support within the IT industry

Schmidt, 2003-10-25 missions in fact also treat an envisaged mutual impact among them As for the 2002 edition in Irvine the organizers wanted to stimulate this cross pollination with a program of shared famous keynote speakers this year we got Sycara Ble Soley and Mylopoulos and encouraged multiple attendance by providing authors with free access to another conference or workshop of their choice We received an even larger number of submissions than last year for the three conferences 360 in total and the workshops 170 in total Not only can we therefore again claim a measurable success in attracting a representative volume of scientific papers but such a harvest allowed the program committees of course to compose a high quality cross section of worldwide research in the areas covered In spite of the increased number of submissions the Program Chairs of the three main conferences decided to accept only approximately the same number of papers for presentation and publication as in 2002 i.e. around 1 paper out of every 4.5 submitted For the workshops the acceptance rate was about 1 in 2 Also for this reason we decided to separate the proceedings into two

volumes with their own titles and we are grateful to Springer Verlag for their collaboration in producing these two books The reviewing process by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees *Technology Diffusion and Adoption: Global Complexity, Global Innovation* Zolait, Ali Hussein Saleh, 2013-01-31 *Technology Diffusion and Adoption Global Complexity Global Innovation* discusses the emerging topics of information technology and the IT based solutions in global and multi cultural environments This comprehensive collection addresses the aspects of innovation diffusion in the field of business computing technologies and is essential for researchers practitioners academicians and educators all over the world **Handbook of Information Security, Key Concepts, Infrastructure, Standards, and Protocols** Hossein Bidgoli, 2006-03-20 The Handbook of Information Security is a definitive 3 volume handbook that offers coverage of both established and cutting edge theories and developments on information and computer security The text contains 180 articles from over 200 leading experts providing the benchmark resource for information security network security information privacy and information warfare Mobile Computing Raj Kamal, 2007 *Mobile Computing* is designed to serve as a textbook for students in the disciplines of computer science and engineering electronics and communication engineering and information technology It describes the basic concepts of mobile computing and provides technical information about the various aspects of the subject as also the latest technologies that are currently in use The first few chapters present a balanced view of mobile computing as well as mobile communication including the 2G and 3G communication systems mobile IP and mobile TCP The subsequent chapters provide a systematic explanation of mobile computing as a discipline in itself The book provides an in depth coverage of databases in mobile systems methods of data caching dissemination and synchronization Bluetooth IrDA and ZigBee protocols data security mobile ad hoc and wireless sensor networks and programming languages and operating systems for mobile computing devices Written in an easy to understand and student friendly manner the book includes several illustrative examples and sample codes A comprehensive set of exercises is included at the end of each chapter
