Dhawan,2017-01-01 The dominance of insects in the world fauna has made them the humanity s greatest rival for the world s
food resources both directly by eating the plants cultivated for food and indirectly as vectors of pathogens attacking these
plants Agricultural scientists and especially entomologists have strived hard to develop a diversity of cultural mechanical
biological and chemical weapons during the last more than two centuries to gain dominance over insects However there is
evidence that insect pest problems have escalated with an increasing cropping intensity and with the use of agrochemicals
inherent in modern agriculture Consequently Indian plant protection scientists have intensified research on the development
of pest management tactics and effective pest management systems have been designed for all the important crops in the
country This book consisting of 29 chapters draws together the diverse literature on the subject of insect pest management
in agriculture and contains contributions written by scientists having extensive experience with insect pest problems in
