Pesticide Disposal And Detoxification:

Pesticide Disposal and Detoxification A. P. Dillon, 1981 The Pesticide Detox Jules Pretty, 2012-07-26 Since the 1960s the world's population has more than doubled and agricultural production per person has increased by a third. Yet this growth in production has masked enormous hidden costs arising from widespread pesticide use: massive ecological damage and high incidences of farmer poisoning and chronic health effects. Whereas once the risks involved with pesticide use were judged to be outweighed by the potential benefits, increasingly the external costs of pesticides to environments and human health are being seen as unacceptable. In response to this trend, recent years have seen millions of farmers in communities around the world reduce their use of harmful pesticides and develop cheaper and safer alternatives. The Pesticide Detox explores the potential for the phasing out of hazardous pesticides and the phasing in of cost-effective alternatives already available on the market. This book makes clear that it is time to start the pesticide detox and to move towards a more sustainable agriculture.

Residues of Pesticides and Other Contaminants in the Total Environment Francis A. Gunther, 2012-12-06 Worldwide concern in scientific, industrial, and governmental communities over traces of toxic chemicals in foodstuffs and in both abiotic and biotic environments has justified the present triumvirate of specialized publications in this field: comprehensive reviews, rapidly published progress reports, and archival documentations. These three publications are integrated and scheduled to provide in international communication the coherency essential for non-duplicative and current progress in a field as dynamic and complex as environmental contamination and toxicology. Until now there has been no journal or other publication series reserved exclusively for the diversified literature on toxic chemicals in our foods, our feeds, our geographical surroundings, our domestic animals, our wild life, and ourselves. Around the world, immense efforts and many talents have been mobilized to technical and other evaluations of nature's local magnitudes, fates, and toxicology of the persisting residues of these chemicals loosed upon the world. Among the sequelae of this broad new emphasis has been an inescapable need for an articulated set of authoritative publications where one could expect to find the latest important world literature produced by this emerging area of science together with documentation of pertinent ancillary legislation.

DEACTIVATION/DETOXIFICATION METHODS FOR THE SAFE DISPOSAL OF SELECTED PESTICIDES. Sheldon S. Lande, 1978 This sequel to the Handbook for Pesticide Disposal by Common Chemical Methods has examined chemical detoxification/degradation methods for 40 pesticides. The objectives for this study are the same as described in the companion to develop practical chemical methods by which the layman can detoxify pesticides and to delineate hazards associated with the detoxification methods. The 40 pesticides were selected on the basis of their toxicological properties, their consumption, and their representation of other pesticides. Chemistry was reviewed for each through literature search and personal contacts with pesticide manufacturers and other sources. Although many of the selected pesticides are susceptible

to alkaline hydrolysis this approach is only recommended for 11 of the pesticides monocrotophos phosphamidon fensulfotion PennCap M microencapsulated methyl parathion disulfoton phorate methamidophos carbofuran aldicarb methomyl and captafol Details for treating each of the 11 pesticides are presented No acceptable chemical detoxification was found for the remaining pesticides ronnel dimethoate Dyfonate Def EPTC molinate thiram propanil Diphenamid chlorozuron simazine cyanazine Amitrole paraquat PCNB dinoseb chloropicrin chlorobenzilate endrin D D dibromochloropropane DBCP BHC dicamba sodium fluoroacetate Compound 1080 creosote and warfarin Pesticide Pollution S.
