Pesticides and the Living Landscape Robert L. Rudd,1970 *Pesticides and the Living Landscape* India. Scheduled Areas and Scheduled Tribes Commission,1964 **DDT, Silent Spring, and the Rise of Environmentalism** Thomas Dunlap,2015-09-14 No single event played a greater role in the birth of modern environmentalism than the publication of Rachel Carson s *Silent Spring* and its assault on insecticides The documents collected by Thomas Dunlap trace shifting attitudes toward DDT and pesticides in general through a variety of sources excerpts from scientific studies and government reports advertisements from industry journals articles from popular magazines and the famous Fable for Tomorrow from *Silent Spring* Beginning with attitudes toward nature at the turn of the twentieth century the book moves through the use and early regulation of pesticides the introduction and early success of DDT the discovery of its environmental effects and the uproar over *Silent Spring* It ends with recent debates about DDT as a potential solution to malaria in Africa **The Fire Ant Wars** Joshua Blu Buhs,2010-11-15 Sometime in the first half of the twentieth century a coterie of fire ants came ashore from South American ships docked in Mobile Alabama Fanning out across the region the fire ants invaded the South damaging crops harassing game animals and hindering harvesting methods Responding to a collective call from southerners to eliminate these invasive pests the U S Department of Agriculture developed a campaign that not only failed to eradicate the fire ants but left a wake of dead wildlife sickened cattle and public protest With political intrigue environmental tragedy and such figures as Rachel Carson and E O Wilson *The Fire Ant Wars* is a grippingly perceptive tale of changing social attitudes and scientific practices Tracing the political and scientific eradication campaigns Joshua Buhs s bracing study uses the saga as a means to consider twentieth century American concepts of nature and environmental stewardship In telling the story Buhs explores how human concepts of nature evolve and how these ideas affect the natural and social worlds Spotlighting a particular issue to discuss larger questions of science public perceptions and public policy from pre environmental awareness to the activist years of the early environmental movement *The Fire Ant Wars* will appeal to historians of science environmentalists and biologists alike *Long-term Farm Policy to Succeed the Agriculture and Food Act of 1981* United States. Residue Reviews Francis A. Gunther, Jane Davies

Gunther, 2013-11-21 Worldwide concern in scientific industrial and governmental communities over traces of toxic chemicals in foodstuffs and in both abiotic and biotic environments has justified the present triumvirate of specialized publications in this field comprehensive reviews rapidly published progress reports and archival documentations These three publications are integrated and scheduled to provide in international communication the coherency essential for nonduplicative and current progress in a field as dynamic and complex as environmental contamination and toxicology Until now there has been no journal or other publication series reserved exclusively for the diversified literature on toxic chemicals in our foods our feeds our geographical surroundings our domestic animals our wild life and ourselves Around the world immense efforts and many talents have been mobilized to technical and other evaluations of nature's local magnitudes fates and toxicology of the persisting residues of these chemicals loosed upon the world Among the sequelae of this broad new emphasis has been an inescapable need for an articulated set of authoritative publications where one could expect to find the latest important world literature produced by this emerging area of science together with documentation of pertinent ancillary legislation

it is an exploration of the story we tell ourselves about the costs and benefits of pesticides and how corporations government officials ordinary citizens and the press shape that story to reflect our ideals interests and emotions

Pesticides Monitoring Journal , 1974 **Rachel Carson** Linda Lear, 2009 By drawing on previously unavailable sources and on interviews with those who knew her Linda Lear gives a compelling portrait of this heroic woman illuminating the origin of her connection with nature and of her determination to save what she loved Lear reveals the unexpected influence of Carson s early experience with industrial pollution and examines her life changing encounter with the possibility of global extinction in the frightening days of the early Cold War The book follows Carson s efforts to become a marine biologist at a time when women were unwelcome in the academic community It shows how her connections with nature were confirmed and strengthened through her work as a government scientist and editor where her views about the potential dangers of synthetic chemical pesticides evolved By the late 1950s Carson had transformed colorless government research into three brilliant popular books about the sea including *The Sea Around Us* and had become the most respected science writer in America Rachel Carson challenged the culture of her time and in the process shaped a powerful social movement that altered the course of American history
