Microbiological Risk Assessment In Food Processing:

Microbiological Risk Assessment in Food Processing M. Brown, M Stringer, 2002-09-26 The chilling and freezing of meat remains an essential way of extending shelf life and maintaining quality Based on the work of the internationally renowned Food Refrigeration and Process Engineering Centre FRPERC Meat refrigeration provides an authoritative guide both to the impact of refrigeration on meat and best practice in using it to maximise meat quality for the consumer Part one considers the impact of refrigeration on meat quality There are chapters on the microbiology of refrigerated meat and its influence on shelf life drip production weight loss and the effect of refrigeration on colour and texture Part two looks at best practice in managing the cold chain from carcass to consumer The authors discuss primary chilling freezing thawing and tempering transport storage retail display and consumer handling Part three of the book looks at aspects of process control including chapters on such issues as temperature measurement the design and optimal use of refrigeration systems Both authoritative and practical Meat refrigeration is a standard work for all those wishing to maximise the quality of refrigerated meat The standard work on meat refrigeration Covers both individual quality issues and the management of the cold chain from carcass to consumer

Microbiological Risk Assessment in Food Processing M. Brown, M Stringer, 2002-09-26 Microbiological risk assessment MRA is one of the most important recent developments in food safety management Adopted by Codex Alimentarius and many other international bodies it provides a structured way of identifying and assessing microbiological risks in food Edited by two leading authorities and with contributions by international experts in the field Microbiological risk assessment provides a detailed coverage of the key steps in MRA and how it can be used to improve food safety The book begins by placing MRA within the broader context of the evolution of international food safety standards Part one introduces the key steps in MRA methodology A series of chapters discusses each step starting with hazard identification and characterisation before going on to consider exposure assessment and risk characterisation Given its importance risk communication is also covered Part two then considers how MRA can be implemented in practice There are chapters on implementing the results of a microbiological risk assessment and on the qualitative and quantitative tools available in carrying out a MRA It also discusses the relationship of MRA to the use of microbiological criteria and another key tool in food safety management Hazard Analysis and Critical Control Point HACCP systems With its authoritative coverage of both principles and key issues in implementation Microbiological risk assessment in food processing is a standard work on one of the most important aspects of food safety management Provides a detailed coverage of the key steps in microbiological risk assessment MRA and how it can be used to improve food safety Places MRA within the broader context of the evolution of international food safety standards Introduces the key steps in MRA methodology considers exposure assessment and risk characterisation and covers risk communication

Microbiological Risk Assessment Associated with the Food Processing and Distribution Chain Jeanne-Marie Membre, 2022-05-23 According to the World Health Organization one in

every ten people worldwide falls ill from eating contaminated food every year with 550 million cases of diarrheal diseases Microbiological risk assessment aims to characterize the nature and probability of harm resulting from human exposure to the biological agents that are present in foodstuffs This assessment must take into account all stages of the chain from the production of raw materials to consumption After briefly introducing food safety and risk assessment this book details the four major steps of microbiological risk assessment The contributors first present hazard identification and then exposure assessment which is subdivided into methods for the detection and enumeration of pathogens and for the quantification of the level of exposure Then hazard characterization is subdivided into pathogenicity mechanisms and quantification of the dose response relationship Finally a guide for microbiological risk characterization is provided The conclusion presents possible development avenues for microbiological risk assessment particularly its integration into a holistic assessment of food systems
