Optimum Seeking Methods Douglass J. Wilde,1964 Optimum Seeking Methods. [With Illustrations.]. Douglas James WILDE,1964 **Optimum Seeking Methods by Douglass J Wilde** Douglass J. Wilde,1964 *Comparison of Optimum Seeking Methods* Jean-Marc Charles Henelle,1969 **A Computer Program for the Study of Optimum Seeking Methods** Dwight Lynn Sorrell,1969 **Popularizing Mathematical Methods in the People's Republic of China** L.K. Hua,Wang,2012-12-06 Professor Hua Loo Keng is the first person to have undertaken the task of popularizing mathematical methods in China As early as 1958 he proposed that the application of operations research methods be initiated in industrial production With his students Yu Ming I Wan Zhe Xian and Wang Yuan Professor Hua visited various transportation departments to promote mathematical methods for dealing with transportation problems and a mass campaign was organized by them and other mathematicians to advance and apply linear programming methods to industrial production in Beijing and in Shandong province However due to the fact that these methods have limited applications and their computation is rather complex their popularization and utilization in China have so far been restricted to a small number of sectors such as the above mentioned transportation departments In 1958 Hua Loo Keng proposed the use of Input Output methods in the formulation of national economic plans Apart from publicizing this method he carried out in depth research on the subject He also gave lectures on related non negative matrix theory pointing out the economic significance of various theoretical results **Probability-Based Multi-objective Optimization for Material Selection** Maosheng Zheng,Jie Yu,Haipeng Teng,Ying Cui,Yi Wang,2023-08-24 The second edition of this book illuminates the fundamental principle and applications of probability based multi objective optimization for material selection in viewpoint of system theory in which a brand new concept of preferable probability and its assessment as well as other treatments are introduced by authors for the first time Hybrids of the new approach with experimental design methodologies response surface methodology orthogonal experimental design and uniform experimental design are all performed robustness assessment and performance utility with desirable value are included discretization treatment in the evaluation is presented fuzzy based approach and cluster analysis are involved applications in portfolio investment and shortest path problem are concerned as well The authors wish this work will cast a brick to attract jade and would make its contributions to relevant fields as a paving stone It is designed to be used as a textbook for postgraduate and advanced undergraduate students in relevant majors while also serving as a valuable reference book for scientists and engineers involved in related fields **Numerical optimum seeking methods** Paavo Uronen,Asko K. Operations Research Himanshu,2018-11-10 Operations research encompasses a wide range of problem solving techniques and methods applied in the pursuit of improved decision making and efficiency Some of the tools used by operations researchers are statistics optimization probability theory queuing theory game theory graph theory decision analysis mathematical modeling and simulation An Information System is any combination of information technology and

people's activities using that technology to support operations management and decision making. In a very broad sense the term information system is frequently used to refer to the interaction between people, algorithmic processes, data, and technology. Operations Research is the scientific study of logistic networks to provide for decision support at all levels in order to optimize production and distribution of the commodity flows. Nowadays these logistic networks have become very large and may range over several countries while the demands for quality of service have grown similarly to ever higher standards. Generally, one agrees that to maintain such large networks successfully, one needs the control of all the information flows through the network that is continuous information on the status of the resources. Operations research is an interdisciplinary branch of applied mathematics and formal science that uses advanced analytical methods such as mathematical modeling, statistical analysis, and mathematical optimization to arrive at optimal or near-optimal solutions to complex decision-making problems. It is often concerned with determining the maximum or minimum of some real-world objective. The book of operations management features the latest concepts and applications while not losing focus on the core concepts that has made this text a market leader.

Iterative Solution of Nonlinear Equations in Several Variables J. M. Ortega, W. C. Rheinboldt, 2014-05-10. Computer Science and Applied Mathematics. *Iterative Solution of Nonlinear Equations in Several Variables* presents a survey of the basic theoretical results about nonlinear equations in n dimensions and analysis of the major iterative methods for their numerical solution. This book discusses the gradient mappings and minimization, contractions, and the continuation property and degree of a mapping. The general iterative and minimization methods, rates of convergence, and one-step stationary and multistep methods are also elaborated. This text likewise covers the contractions and nonlinear majorants, convergence under partial ordering, and convergence of minimization methods. This publication is a good reference for specialists and readers with an extensive functional analysis background.

Energy Optimization in Process Systems Stanislaw Sieniutycz, Jacek Jezowski, 2009-05-06. Despite the vast research on energy optimization and process integration, there has to date been no synthesis linking these together. This book fills the gap, presenting optimization and integration in energy and process engineering. The content is based on the current literature and includes novel approaches developed by the authors. Various thermal and chemical systems, heat and mass exchangers, thermal and water networks, energy converters, recovery units, solar collectors, and separators are considered. Thermodynamics, kinetics, and economics are used to formulate and solve problems with constraints on process rates, equipment size, environmental parameters, and costs. Comprehensive coverage of dynamic optimization of energy conversion systems and separation units is provided along with suitable computational algorithms for deterministic and stochastic optimization approaches based on nonlinear programming, dynamic programming, variational calculus, Hamilton-Jacobi-Bellman theory, Pontryagin's maximum principles, and special methods of process integration. Integration of heat, energy, and process water within a total site is shown to be a significant factor reducing production costs, in particular costs of utilities for the chemical industry. This

integration involves systematic design and optimization of heat exchangers and water networks HEN and WN After presenting basic insight based Pinch Technology systematic optimization based sequential and simultaneous approaches to design HEN and WN are described Special consideration is given to the HEN design problem targeting stage in view of its importance at various levels of system design Selected advanced methods for HEN synthesis and retrofit are presented For WN design a novel approach based on stochastic optimization is described that accounts for both grassroot and revamp design scenarios Presents a unique synthesis of energy optimization and process integration that applies scientific information from thermodynamics kinetics and systems theory Discusses engineering applications including power generation resource upgrading radiation conversion and chemical transformation in static and dynamic systems Clarifies how to identify thermal and chemical constraints and incorporate them into optimization models and solutions **Distributed**

Computing and Artificial Intelligence, 13th International Conference Sigeru Omatu, Ali Semalat, Grzegorz Bocewicz, Paweł Sitek, Izabela E. Nielsen, Julián A. García García, Javier Bajo, 2016-05-31 The 13th International Symposium on Distributed Computing and Artificial Intelligence 2016 DCAI 2016 is a forum to present applications of innovative techniques for studying and solving complex problems The exchange of ideas between scientists and technicians from both the academic and industrial sector is essential to facilitate the development of systems that can meet the ever increasing demands of today's society The present edition brings together past experience current work and promising future trends associated with distributed computing artificial intelligence and their application in order to provide efficient solutions to real problems This symposium is organized by the University of Sevilla Spain Osaka Institute of Technology Japan and the Universiti Teknologi Malaysia Malaysia **Combinatorial Group Testing and Its Applications** Dingzhu Du, Frank Hwang, 2000 Group testing

has been used in medical chemical and electrical testing coding drug screening pollution control multiaccess channel management and recently in data verification clone library screening and AIDS testing The mathematical model can be either combinatorial or probabilistic This book summarizes all important results under the combinatorial model and demonstrates their applications in real problems Some other search problems including the famous counterfeit coins problem are also studied in depth There are two reasons for publishing a second edition of this book The first is the usual need to update the text after six years and correct errors The second and more important reason is to accommodate the recent sudden growth of interest in applying the idea of group testing to clone library screening This development is much more than just a new application since the new application brings with it new objectives which require a new twist of theory It also embraces the growing importance of two topics nonadaptive algorithms and error tolerance Two new chapters one on clone library screening and the other on error tolerance have been added Also included is a new chapter on counterfeit coins the most famous search problem historically which recently drew on an unexpected connection to some deep mathematical theory to yield new results Finally the chapters have been recognized into parts to provide focuses and perspectives
