Radio Resource Management for Multimedia QoS Support in Wireless Networks Huan Chen, Lei Huang, Sunil Kumar, C.C. Jay Kuo, 2012-12-06 Due to the great success and enormous impact of IP networks Internet access such as sending and receiving e-mails and web browsing have become the ruling paradigm for next generation wireless systems. On the other hand, great technological and commercial success of services and applications is being witnessed in mobile wireless communications with examples of cellular packet voice telephony and wireless LANs. The service paradigm has thus shifted from the conventional voice service to seamlessly integrated high quality multimedia transmission over broadband wireless mobile networks. The multimedia content may include data, voice, audio, image, video and so on. With availability of more powerful portable devices such as PDA, portable computer and cellular phone coupled with the easier access to the core network using a mobile device, the number of mobile users and the demand for multimedia based applications is increasing rapidly. As a result, there is an urgent need for a system that supports heterogeneous multimedia services and provides seamless access to the desired resources via wireless connections. Therefore, the convergence of multimedia communication and wireless mobile networking technologies into the next generation wireless multimedia WMM networks with the vision of anytime anywhere anyform information system is the certain trend in the foreseeable future. However, successful combination of these two technologies presents many challenges such as available spectral bandwidth, energy efficiency, seamless end-to-end communication, robustness, security, etc.

Radio Resource Management Strategies in UMTS Jordi Perez Romero, Oriol Sallent, Ramon Agusti, Miguel Angel Diaz-Guerra, 2005-10-31 The key feature of future mobile communication systems is the ability to deliver wideband and high bit rate multimedia services alongside the traditional radio services such

as voice messaging and slow rate data The broad range of services expected to be supported can be divided into different Quality of Service QoS classes However the provision of such mobile multimedia services under QoS guarantees will not be possible without a utilization of the air interface resources by means of Radio Resource Management RRM strategies that ensure the target QoS the planned coverage area and that offer a high system capacity Under this framework the book focuses on the RRM concepts including the theoretical background that serves as a basis for the description of specific RRM algorithms The RRM problem for UMTS is presented and more specifically for the FDD mode which is based on a WCDMA scheme More specifically the different aspects that are covered include Introduces the mobile communications sector and UMTS including the evolution towards 4G systems with an overview of the QoS concept which is key for the definition of RRM strategies Offers a detailed description of the radio interface in UMTS as the basis for the implementation of RRM strategies Provides the fundamental concepts related with the development of RRM strategies in WCDMA networks Analyses particular RRM algorithms in a variety of scenarios trying to identify the key parameters and factors that influence their performance Explores the evolution of UMTS towards Beyond 3G systems and the concept of Common RRM in heterogeneous networks with the aid of some algorithm examples This comprehensive title is essential reading for engineers and managers in radio engineering departments of UMTS network operators and UMTS equipment manufacturers It will also prove insightful to researchers in the field of 3G and Beyond 3G systems and academics in any of these areas
