Number Story Peter Michael Higgins, 2008-01-01 Peter Higgins distills centuries of work into one delightful narrative that celebrates the mystery of numbers and explains how different kinds of numbers arose and why they are useful Full of historical snippets and interesting examples the book ranges from simple number puzzles and magic tricks to showing how ideas about numbers relate to real world problems This fascinating book will inspire and entertain readers across a range of abilities Easy material is blended with more challenging ideas As our understanding of numbers continues to evolve this book invites us to rediscover the mystery and beauty of numbers **Complex Analysis and Dynamical Systems II** Lawrence Allen Zalcman, Mark L'vovich Agranovskii, Lavi Karp, David Shoiykhet, 2005 This volume is a collection of papers reflecting the

conference held in Nahariya Israel in honor of Professor Lawrence Zalcman's sixtieth birthday. The papers many written by leading authorities range widely over classical complex analysis of one and several variables differential equations and integral geometry. Topics covered include but are not limited to these areas within the theory of functions of one complex variable complex dynamics elliptic functions Kleinian groups quasiconformal mappings Tauberian theorems univalent functions and value distribution theory. Altogether the papers in this volume provide a comprehensive overview of activity in complex analysis at the beginning of the twenty first century and testify to the continuing vitality of the interplay between classical and modern analysis. It is suitable for graduate students and researchers interested in computer analysis and differential geometry. Information for our distributors. This book is co published with Bar Ilan University. The Encyclopedia of Fantasy John Clute, John Grant, 1999-03-15 Like its companion volume The Encyclopedia of Science Fiction this massive reference of 4 000 entries covers all aspects of fantasy from literature to art. *Building and Using Datasets on Armed Conflicts* Mayeul Kauffmann, 2008 The so called hard or exact sciences with their necessary emphasis on technology and on the technical are hardly reputed for being very human and conversely the so called human sciences are often pronounced as soft because they cannot be based on the certainties associated with the former. The search for truth which is the essential dimension of the construction of a peaceful world therefore has to navigate between considerations of a philosophical nature and the concrete data of the hard sciences. If ever since the humanism of the Renaissance period we have been happy to lay claim to the wisdom of one of its great writers Rabelais who taught a moral lesson to the young Pantagruel with the neat formula science without conscience is the ruin of the soul we nonetheless stand in awe before modern scientific advances and the extraordinary achievements that they have opened up. If everything is not permissible at least everything seems possible.
