Patil, 1971 **Sampling Methods for Multiresource Forest Inventory** Hans T. Schreuder, Timothy G. Gregoire, Geoffrey B. Wood, 1993-04-16
Designed to aid readers in gathering the most reliable quantitative information on forests for the least cost Thoroughly explains the interrelationships between sampling strategies discusses forestry techniques of efficient tactics examines new developments in statistics having immediate applications in forestry and describes related developments that should have relevance in the future Includes practical methods for dealing with forest data such as tree number height diameter and marketable wood Also contains problem sets Modeling Demographic Processes in Marked Populations David L. Thomson, Evan G. Cooch, Michael J. Conroy, 2008-12-11 Here biologists and statisticians come together in an interdisciplinary synthesis with the aim of developing new methods to overcome the most significant challenges and constraints faced by quantitative biologists seeking to model demographic rates **Statistical Ecology** G. P. Patil, E. C. Pielou, W. E. Waters, 1971 Population Genetics Matthew B. Hamilton, 2011-09-23 This book aims to make population genetics approachable logical and easily understood To achieve these goals the book s design emphasizes well explained introductions to key principles and predictions These are augmented with case studies as well as illustrations along with introductions to classical hypotheses and debates Pedagogical features in the text include Interact boxes that guide readers step by step through computer simulations using public domain software Math boxes that fully explain mathematical derivations Methods boxes that give insight into the use of actual genetic data Numerous Problem boxes are integrated into the text to reinforce concepts as they are encountered Dedicated website at www.wiley.com/go/hamiltongenetics This text also offers a highly accessible introduction to coalescent theory the major conceptual advance in population genetics of the last two decades

Spatiotemporal Models of Population and Community Dynamics T. Czarán, 1998 This book presents a comprehensive typology and a comprehensible description of spatiotemporal models used in population dynamics The main types included are reaction diffusion systems patch models metapopulation approaches host parasitoid models cellular automata interacting particle systems tessellations and distance models The models are introduced through examples and with informative verbal explanations to help understanding Some of the cellular automation examples are models not yet published elsewhere Possible extensions of certain model types are suggested **Integrated Population Biology and Modeling Part B**, 2019-02-05 Integrated Population Biology and Modeling Part B Volume 40 offers very delicately complex and precise realities of quantifying modern and traditional methods of understanding populations and population dynamics

Modeling Biology Manfred Dietrich Laubichler, Gerd B. Müller, 2007 Experts examine new modeling strategies for the interpretation of biological data and their integration into the conceptual framework of theoretical biology detailing approaches that focus on morphology development behavior or evolution Abstract and conceptual models have become an indispensable tool for analyzing the flood of highly detailed empirical data generated in recent years by advanced techniques in the biosciences Scientists are developing new modeling strategies for analyzing data integrating results into the conceptual framework of theoretical biology and formulating new hypotheses In Modeling Biology leading scholars investigate new modeling strategies in the domains of morphology development behavior and evolution The emphasis on models in the biological sciences has been accompanied by a new focus on conceptual issues and a more complex understanding of epistemological concepts Contributors to Modeling Biology discuss models and modeling strategies from the perspectives of philosophy history and applied mathematics Individual chapters discuss specific approaches to modeling in such domains as biological form development and behavior Finally the book addresses the modeling of these properties in the context of evolution with a particular emphasis on the emerging field of evolutionary developmental biology or evo devo Contributors Giorgio A Ascoli Chandrajit Bajaj James P Collins Luciano da Fontoura Costa Kerstin Dautenhahn Nigel R Franks Scott Gilbert Marta Iba es Miguez Juan Carlos Izpis a Belmonte Alexander S Klyubin Thomas J Koehnle Manfred D Laubichler Sabina Leonelli James A R Marshall George R McGhee Jr Gerd B M ller Chrystopher L Nehaniv Karl J Niklas Lars Olsson Eirikur Palsson Daniel Polani Diego Rasskin Gutman Hans J rg Rheinberger Alexei V Samsonovich Jeffrey C Schank Harry B M Uylings Jaap van Pelt Iain Werry

Methods For Monitoring Tiger And Prey Populations K. Ullas Karanth, James D. Nichols, 2017-10-26 This book addresses issues of monitoring populations of tigers ungulate prey species and habitat occupancy with relevance to similar assessments of large mammal species and general biodiversity It covers issues of rigorous sampling modeling estimation and adaptive management of animal populations using cutting edge tools such as camera traps genetic identification and Geographic Information Systems GIS applied under the modern statistical approach of Bayesian and likelihood based inference Of special focus here are animal survey data derived for use under spatial capture recapture occupancy distance sampling mixture modeling and connectivity

analyses Because tigers are an icons of global conservation in last five decades enormous amounts of commitment and resources have been invested by tiger range countries and the conservation community for saving wild tigers However status of the big cat remains precarious Rigorous monitoring of surviving wild tiger populations continues to be essential for both understanding and recovering wild tigers However many tiger monitoring programs lack the necessary rigor to generate the reliable results While the deployment of technologies analyses computing power and human resource investments in tiger monitoring have greatly progressed in the last couple of decades a full comprehension of their correct deployment has not kept pace in practice In this volume Dr Ullas Karanth and Dr James Nichols world leaders in tiger biology and quantitative ecology respectively address this key challenge They have collaborated with an extraordinary array of 30 scientists with expertise in a range of necessary disciplines biology and ecology of tigers prey and habitats advanced statistical theory and practice computation and programming practical field sampling methods that employ technologies as varied as camera traps genetic analyses and geographic information systems The book is a tour de force of cutting edge methodologies for assessing not just tigers but also other predators and their prey The 14 chapters here are lucidly presented in a coherent sequence to provide tiger specific answers to fundamental questions in animal population assessment why monitor what to monitor and how to monitor While highlighting robust methods the authors also clearly point out those that are in use but unreliable The managerial dimension of tiger conservation described here the task of matching monitoring objectives with skills and resources to integrate tiger conservation under an adaptive framework also renders this volume useful to wildlife scientists as well as conservationists

Biological Populations John Allan Van Sickle,1975 *Hierarchical Modeling and Inference in Ecology* J. Andrew

Royle, Robert M. Dorazio, 2008-10-15 A guide to data collection modeling and inference strategies for biological survey data using Bayesian and classical statistical methods This book describes a general and flexible framework for modeling and inference in ecological systems based on hierarchical models with a strict focus on the use of probability models and parametric inference Hierarchical models represent a paradigm shift in the application of statistics to ecological inference problems because they combine explicit models of ecological system structure or dynamics with models of how ecological systems are observed The principles of hierarchical modeling are developed and applied to problems in population metapopulation community and metacommunity systems The book provides the first synthetic treatment of many recent methodological advances in ecological modeling and unifies disparate methods and procedures The authors apply principles of hierarchical modeling to ecological problems including occurrence or occupancy models for estimating species distribution abundance models based on many sampling protocols including distance sampling capture recapture models with individual effects spatial capture recapture models based on camera trapping and related methods population and metapopulation dynamic models models of biodiversity community structure and dynamics Wide variety of examples involving many taxa birds amphibians mammals insects plants Development of classical likelihood based procedures for inference as well as Bayesian methods of analysis Detailed explanations describing the implementation of hierarchical models using freely available software such as R and WinBUGS Computing support in technical appendices in an online companion web site

Billy G. Isom, 1986 **Advances in Combinatorial Methods and Applications to Probability and Statistics** N Balakrishnan, 1997-05-01 Sri Gopal Mohanty has made pioneering contributions to lattice path counting and its applications to probability and statistics This is clearly evident from his lifetime publications list and the numerous citations his publications have received over the past three decades My association with him began in 1982 when I came to McMaster University Since then I have been associated with him on many different issues at professional as well as cultural levels I have benefited greatly from him on both these grounds I have enjoyed very much being his colleague in the statistics group here at McMaster University and also as his friend While I admire him for his honesty sincerity and dedication I appreciate very much his kindness modesty and broad mindedness Aside from our common interest in mathematics and statistics we both have great love for Indian classical music and dance We have spent numerous many different subjects associated with the Indian music and hours discussing dance I still remember fondly the long drive to Amherst Massachusetts I had a few years ago with him and his wife Shantimayee and all the hearty discussions we had during that journey Combinatorics and applications of combinatorial methods in probability and statistics has become a very active and fertile area of research in the recent past
