Unexpected Wealth Bonnie Brown Hartley, 2006-02 *Deconstructing the English Passive* Anja Wanner, 2009-07-14 This book analyzes the form and function of the English passive from a verb based point of view It takes the position that the various surface forms of the passive with or without thematic subject with or without object with or without by phrase with or without auxiliary have a common source and are determined by the interplay of the syntactic properties of the verb and general syntactic principles Each structural element of the passive construction is examined separately and the participle is considered the only defining component of the passive Special emphasis is put on the existence of an implicit argument usually an agent and its representation in the passive A review of data from syntax language acquisition and psycholinguistics shows that the implicit agent is not just a conceptually understood argument It is argued that it is represented at the level of argument structure and that this is what sets the passive apart from other patient subject constructions A corpus based case study on the use of the passive in academic writing analyzes the use of the passive in this particular register One of the findings is that about 20-25% of passives occur in constructions that do not require an auxiliary a result that challenges corpus studies on the use of the passive that only consider full be passives It is also shown that new active voice constructions have emerged that compete with the passive without having a more visible agent The emergence of these constructions such as This paper argues is discussed in the context of changes in the rhetoric of scientific discourse The book is mainly of interest to linguists and graduate students in the areas of English syntax semantics and pragmatics

Dispute Settlement Reports 2007: Volume 8, Pages 3103-3520 , **Mathematical Subjects** Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly

market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children s mathematical achievement against identified benchmarks and each other
