Ozone Connections Penelope Canan, Nancy Reichman, 2017-09-08 It is difficult to think of a more significant example of international cooperation to address a problem that threatened the health and wellbeing of the entire planet than the 1987 Montreal Protocol for the Elimination of Ozone Depleting Substances This breakthrough in international environmental governance has proved to be an extraordinary success beyond rhetoric or promises In a dozen years this international agreement went from an understanding of the need to act in a precautionary manner for mutual benefit to a successful worldwide effort to eliminate chemical substances harmful to our protective ozone layer The production and consumption of most ozone depleting substances has now been phased out in developed countries with developing countries not far behind What happened and why is of tremendous importance for those looking for guidance in the future particularly those now involved in hugely complicated negotiations on climate change The success of the Montreal Protocol has been linked to many factors such as political will treaty flexibility and the recognition of equity issues raised by developing countries While comprehensively analysing all of these success factors Ozone Connections goes on to suggest that

a social organization of global governance as typified by the protocol s Technical and Economic Assessment Panel TEAP was a unique but replicable decisive factor The book argues that we need to understand how the implementation of complex global environmental agreements depends on the construction and exploitation of social connections among experts who act collectively to define solutions to environmental problems This highly original and provoking thesis synthesises some of the more exciting social science concepts and methods while refining our basic understanding of environmental social change and providing policy makers with concrete success factors to replicate This book will be essential reading for academics in the fields of sociology political science international relations network studies human communication motivation collaboration and leadership as well as the burgeoning interdisciplinary field of environmental studies Businesses will also find many applications for practical use Finally the many directly transferable lessons from ozone layer protection make this book a key addition to the growing literature on climate change

Dimensions of Climate Change Hoesung Yi, Intergovernmental Panel on Climate Change. Working Group III., 1996-06-27 The consequences of climate change for society are analysed in this landmark assessment from the IPCC This book assesses the available knowledge on the many issues that society has to face including the international decision making framework applicability to climate change of techniques for assessing costs and benefits the significant social costs of projected climate change and the economic assessment of policy instruments to combat climate change nationally and internationally Some important conclusions of this Second Assessment Report indicate that 10 to 30% of greenhouse gas emissions in most countries can be reduced at negative or zero cost no regrets measures Also the literature indicates that climate change will cause aggregate net damage which provides an economic rationale for going beyond no regrets measures It also indicates that a portfolio of mitigation adaptation and research measures is a sound strategy for addressing climate change given the remaining uncertainties This report speaks directly to the issues that are faced by the many countries committed to limit emissions of greenhouse gases by the year 2000 and currently negotiating actions to be taken beyond that date Will be of great value to the international community of policymakers interested in the consequences of climate change as well as to economists social and natural scientists
