Selected Papers Of Wang Yuan Yuan Wang, 2005-06-07 This volume presents a comprehensive collection of Wang Yuan's original important papers which are not available elsewhere since the majority of the papers were published in China. Covering both pure number theory and applied mathematics, this book is important for understanding Wang Yuan's academic career and also the development of Chinese mathematics in recent years since Wang Yuan's work has a wide ranging influence in China. Wang Yuan is a professor and academician of the Chinese Academy of Sciences. He received his honorable Doctorship from Hong Kong Baptist University. He has published 70 papers and ten books. *Hua Loo-Keng Yuan Wang*, 1999 The distinguished mathematician Hua Loo Keng led an eventful and interesting life through a particularly difficult period in China. This biography originally published in Chinese in 1995 looks in detail at the transformation of Hua from a self taught individual into a world renown mathematician. Hua held a prominent position in the contemporary mathematics circle in China and thus this account of his life can be read as an invaluable historical evaluation of the development of mathematics in China especially during tumultuous events such as the Cultural Revolution and the Great Leap Forward. Besides giving a vivid illustration of Hua's research work in number theory and of his attitude towards and philosophy behind the learning and teaching of mathematics, the author, a student and close friend of Hua's, delves into the latter's tireless efforts in popularizing mathematics in China until his death in 1985. *My Mathematical Life* Yuan Wang, 2024-03-21 This book is an autobiographical interview with Chinese Academician Yuan Wang on his experience in mathematical research. The book looks back on Wang's collaboration with his teacher Hua Loo Keng and younger scholars offering insights into fruitful cooperation in mathematical research. In this book Yuan Wang's path of studying Goldbach conjecture is revealed in detail from motivation to method. Then his work on algebraic number theory is traced back in a separate chapter. The book ends with two chapters which introduce Wang's interest in history of mathematics and his hobbies outside of mathematical research. Wang shows how a mathematician can in the same time be a historical and popular science writer and in particular a well received calligrapher. The book is intended for undergraduate and graduate students studying number theory. Researchers who are willing to learn from the experience of an established mathematician as well as math amateurs and general audience who are interested in Yuan Wang's life story might also find this book appealing.

Popularizing Mathematical Methods in the People's Republic of China L.K. Hua, Wang, 2012-12-06 Professor Hua

Loo Keng is the first person to have undertaken the task of popularizing mathematical methods in China. As early as 1958 he proposed that the application of operations research methods be initiated in industrial production. With his students Yu Ming, I Wan Zhe Xian and Wang Yuan, Professor Hua visited various transportation departments to promote mathematical methods for dealing with transportation problems and a mass campaign was organized by them and other mathematicians to advance and apply linear programming methods to industrial production in Beijing and in Shandong province. However, due to the fact that these methods have limited applications and their computation is rather complex, their popularization and utilization in China have so far been restricted to a small number of sectors such as the above mentioned transportation departments. In 1958, Hua Loo Keng proposed the use of Input Output methods in the formulation of national economic plans. Apart from publicizing this method, he carried out in depth research on the subject. He also gave lectures on related non negative matrix theory, pointing out the economic significance of various theoretical results. *Mathematician And His Mathematical Work, A: Selected Papers Of S S Chern*, Shiu-yuen Cheng, Shiing-shen Chern, P Li, Gang Tian, 1996-09-07. This volume is about the life and work of Shiing Shen Chern, 1911, one of the leading mathematicians of this century. The book contains personal accounts by some friends together with a summary of the mathematical works by Chern himself. Besides a selection of the mathematical papers, the book also contains all his papers published after 1988. *Acta Scientiarum Mathematicarum*, 1983.

Lectures on Gaussian Integral Operators and Classical Groups Yu. A. Neretin, 2011. This book is an elementary self contained introduction to some constructions of representation theory and related topics of differential geometry and analysis. Topics covered include the theory of various Fourier like integral operators such as Segal Bargmann transforms, Gaussian integral operators in L^2 and in the Fock space, integral operators with theta kernels, the geometry of real and p -adic classical groups and symmetric spaces. The heart of the book is the Weil representation of the symplectic group, real and complex realizations, relations with theta functions and modular forms, p -adic and adelic constructions and representations in Hilbert spaces of holomorphic functions of several complex variables. This book is addressed to graduate students and researchers in representation theory, differential geometry and operator theory. Prerequisites are standard university courses in linear algebra, functional analysis and complex analysis. *Selected Papers*, Luogeng Hua, 1983. **New Technical Books**, New York Public Library, 1983. *Number Theory and Its Applications in China*, Yuan Wang, 1988. Emphasizes the accomplishments of Chinese number theorists during 1949-1979, a period when correspondence between China and other countries was discouraged. This work presents a survey of the significant contributions of Chinese mathematicians. It also reflects the developments and state of research in number theory in China. *Revue Roumaine de Mathématiques Pures Et Appliquées*, 1985. *Guide to Information Sources in Mathematics and Statistics*, Martha A. Tucker, Nancy D. Anderson, 2004-09-30. This book is a reference for librarians, mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century. We are in a time of transition in scholarly communications in

mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free
