Paulson, 1949 Early-Middle Pleistocene Transitions Geological Society of London, 2005 The Early Middle Pleistocene transition around 1.2 to 0.5 Ma marks a profound shift in Earth's climate state Low amplitude 41 ka climate cycles dominating the earlier part of the Pleistocene gave way progressively to a 100 ka rhythm of increased amplitude that characterizes our present glacial interglacial world This volume assesses the biotic and physical response to this transition both on land and in the oceans indeed it examines the very nature of Quaternary climate change Milankovitch theory palaeoceanography using isotopes and microfossils marine organic geochemistry tephrochronology the record of loess and soil deposition terrestrial vegetational change and the migration and evolution of hominins as well as other large and small mammals are all considered These themes combine to explore the very origins of our present biota *Cretaceous Period: Biotic Diversity and Biogeography* Ashu Khosla, Spencer G. Lucas, 2016-01-01 **Geological Survey Circular** , 1979 Western North Atlantic Palaeogene and Cretaceous Palaeoceanography Geological Society of London, 2001 Palaeogene and Cretaceous palaeoceanography has been the focus of intense international interest in the last few years spurred by deep ocean drilling at Blake Nose in the North Atlantic as well as the need to use past climate change as input for modelling future climate change This book brings together a number of review papers that describe ancient oceans and unique events in the Earth's climatic history and evolution of biota The papers show evidence of periods characterized by exceptional global warmth such as the Late Palaeocene Thermal Maximum and Cretaceous anoxic events Geochemical records and modelling will make the reader aware that these periods were forced by greenhouse gases *Geologic Time Scale 2020* Felix Gradstein, James G. Reconstructing Earth's Climate History Kristen St. John, R. Mark Leckie, Kate Pound, Megan Jones, Lawrence Krissek, 2012-04-30 The context for understanding global climate change today lies in the records of Earth's past This is demonstrated by decades of paleoclimate research by scientists in organizations such as the Integrated Ocean Drilling Program IODP the Antarctic Geological Drilling Program ANDRILL and many others The purpose of this full colour textbook is to put key data and published case studies of past climate change at your fingertips so that you can experience the nature of paleoclimate reconstruction Using foundational geologic concepts students explore a wide variety of topics including marine sediments age determination stable isotope paleoclimate proxies Cenozoic climate change climate cycles polar climates and abrupt warming and cooling events students are invited to evaluate published scientific data practice developing and testing hypotheses and infer the broader implications of scientific results It is our philosophy that addressing how we know is as important as addressing what we know about past climate change Making climate change science accessible is the goal of this book This book is intended for earth science students at a variety of levels studying paleoclimatology oceanography Quaternary science or earth system science Additional resources for this book can be found
