Persons Animals And Fetuses An Essay In Practical Ethics:

Persons, Animals, and Fetuses M.G. Forrester, 2012-12-06 Forrester discusses animal rights obligations concerning future generations abortion limiting medical treatment and euthanasia Persons are defined as individuals who ought to be treated in accordance with all sound moral principles The author develops an account of what moral principles are sound how we can apply them to complex situations and what makes it reasonable to treat individuals in accordance with particular moral principles This discussion puts the book s practical conclusions on a sounder basis than much other work on practical ethics Most such authors state some general principles but say little about why these principles should be accepted Moreover they rarely show how general principles can generate answers to specific dilemmas Some even maintain that general principles are irrelevant Since Forrester is both a nurse practitioner and a philosopher she has had direct acquaintance with many agonizing situations in medicine Summaries of the theoretical conclusions are included to enable nonprofessionals to follow the discussion of practical issues The book will thus interest not only professional philosophers but also non philosophers concerned with problems in medical and environmental ethics abortion and animal rights *John Stuart Mill and the Ethic of Human Growth* D.A. Habibi, 2013-03-14 In this well researched comprehensive study of J S Mill Professor Habibi argues that the persistent dominant theme of Mill s life and work was his passionate belief in human improvement and progress Several Mill scholars recognize this however numerous writers overlook his growth ethic and this has led to misunderstandings about his value system This study defines and establishes the importance of Mill s growth ethic and clears up misinterpretations surrounding his notions of higher and lower pleasures positive and negative freedom the status of children the legitimacy of authority and support for British colonialism Drawing from the entire corpus of Mill s writings as well as the extensive secondary literature Habibi has written the most focused sustained analysis of Mill s grand leading principle This book will be useful to college students in philosophy and intellectual history as well as specialists in these fields **Applied Ethics in a Troubled World** E. Morscher, O. Neumaier, Peter M. Simons, 2012-12-06 During the last two decades applied ethics has not only developed into one of the most important philosophical disciplines but has also differentiated into so many subdisciplines that it is becoming increasingly difficult to survey it A much needed overview is provided by the eighteen contributions to this volume in which internationally renowned experts deal with central questions of environmental ethics bioethics and medical ethics professional and business ethics social political and legal ethics as well as with the aims and foundations of applied ethics in general Thanks to a philosophical introduction and selected bibliographical references added to each chapter the book is very well suited as a basis for courses in applied ethics It is directed not only to philosophers and to ethicists from other disciplines but to scientists in general and to all people who are interested in the rational discussion of moral principles and their application to concrete problems in the sciences and in everyday life *Human Enhancement Technologies and Our Merger with Machines* Woodrow Barfield, Sayoko

Blodgett-Ford, 2021-06-15 A cross disciplinary approach is offered to consider the challenge of emerging technologies designed to enhance human bodies and minds Perspectives from philosophy ethics law and policy are applied to a wide variety of enhancements including integration of technology within human bodies as well as genetic biological and pharmacological modifications Humans may be permanently or temporarily enhanced with artificial parts by manipulating or reprogramming human DNA and through other enhancement techniques and combinations thereof We are on the cusp of significantly modifying and perhaps improving the human ecosystem This evolution necessitates a continuing effort to re evaluate current laws and if appropriate to modify such laws or develop new laws that address enhancement technology A legal ethical and policy response to current and future human enhancements should strive to protect the rights of all involved and to recognize the responsibilities of humans to other conscious and living beings regardless of what they look like or what abilities they have or lack A potential ethical approach is outlined in which rights and responsibilities should be respected even if enhanced humans are perceived by non enhanced or less enhanced humans as no longer human at all Moral Psychology Today David K. Chan, 2008-02-03 Moral Psychology Today David K Chan Philosophers working in the field of moral psychology concern themselves with issues and questions that straddle across more than one sub discipline in philosophy The answers that they propose and the theories that they propound have implications for moral philosophy the philosophy of mind epistemology and metaphysics Philosophers with an interest in the will or the motivational psychology of human action divide between those investigating psychological and behavioral concepts for their own sake and those working on action theory for the sake of answering larger questions especially ethical ones The essays in this volume all of which were presented at a conference on Values Rational Choice and the Will belong largely in the latter category of research The essays here contribute to debates and discussions on a wide range of topics that are of current interest in moral psychology These essays demonstrate both the breadth of the field of moral psychology and the importance of the questions investigated Artificial boundaries between sub disciplines of philosophy are crossed in putting these essays together in the same anthology There are essays here in meta ethics and in normative ethics There are essays in ethical theory and in applied ethics There are essays that draw on discoveries in empirical psychology *Rwanda and the Moral Obligation of Humanitarian Intervention* Joshua James Kassner, 2014-08-21 A new approach to an issue of tremendous moral political and legal importance and explains why the international community should have intervened in Rwanda *The Diachronic Mind* M.V. Knowledge and Reality Thomas M. Crisp, Matthew Davidson, David Vander Laan, 2006-07-19 This volume
 was conceived as a Festschrift to surprise Alvin Plantinga on his 70th birthday That original plan was not entirely successful
 For one thing the day came and went well before the work was complete For another the project wasn't quite a surprise
 Plantinga caught wind of it though not of its details before the unveiling The occasion was marked however by a presentation
 of a projected table of contents and an early draft of the cover painting by Keith Lehrer Plantinga then saw the details and
 was quite taken aback that the editors and a few contributors had come to South Bend from as far Virginia Florida and
 California to celebrate Now we are pleased to offer the essays themselves The collection ranges widely over metaphysics and
 epistemology Its wingspan testifies to the breadth both of Plantinga's own work and of the audience that has valued it Some
 of the essays deal with ontology examining actualism presentism antirealism properties and artifacts Several essays in
 epistemology raise skeptical questions work through the implications of naturalism or intuitionism and engage Plantinga's own
 Reidian account of warrant Other contributions consider the bearing of philosophical ideas on the Christian faith of split
 brain cases on the doctrine of the Trinity for example and of materialism on the afterlife The contributors are friends
 colleagues and former students of Plantinga The editors thank all of them for their eager participation in this project

Knowing Art Matthew Kieran, Dominic McIver Lopes, 2007-10-20 Artworks potentially convey two kinds of knowledge
 They obviously afford knowledge of art itself and they also afford general empirical knowledge especially knowledge of
 human psychology and value Knowing Art collects ten original essays written by leading philosophers who distill and build
 upon recent work at the intersection of aesthetics and epistemology Specific topics addressed include the objectivity of
 critical knowledge the quality of critical testimony the roles of principles and perception in critical reasoning phenomenal
 knowledge of what a work of art is like the acquisition of factual information and psychological understanding from fictions
 and the limits of images as sources of historical evidence In addressing these topics the volume also explores the challenges
 that art poses for theories of knowledge as well as the challenges that artistic knowledge poses to traditional views about art

Cooperation R. Tuomela, 2013-06-29 In Cooperation A Philosophical Study Tuomela offers the first comprehensive

philosophical theory of cooperation He builds on such notions a collective and joint goals mutual beliefs collective commitments acting together and acting collectively The book analyzes the varieties of cooperation making use of the crucial distinction between group mode and individual mode cooperation The former is based on collective goals and collective commitments the latter on private goals and commitments The book discusses the attitudes and the kinds of practical reasoning that cooperation requires and investigate some of the conditions under which cooperation is likely rationally to occur It also shows some of the drawbacks of the standard game theoretical treatments of cooperation and presents a survey of cooperation research in neighbouring fields Readership Essential reading for researchers and graduate students in philosophy Also of interest to researchers in the social sciences and AI *Philosophy, Psychology, and Psychologism* Dale Jacquette, 2006-04-11 This book presents a remarkable diversity of contemporary opinions on the prospects of addressing philosophical topics from a psychological perspective It considers the history and philosophical merits of psychologism and looks systematically at psychologism in phenomenology cognitive science epistemology logic philosophy of language philosophical semantics and artificial intelligence *Moralities* Paul Ziff, 2013-03-14 This essay is the product of years of distaste for and dissatisfaction with the efforts of moral philosophers It can be tiresome to attend to details to spell out the obvious but moral philosophy is such an abysmally difficult subject that faster than a creeping slug is breakneck reckless speed One simply must content oneself with a slow slimy trail painfully drawn and cautiously constrained Generally speaking philosophy and in particular moral philosophy is too hard for philosophers Even though publishing is spitting in the ocean and even though my sour sweet spittle will not alter the ocean's salinity I am somehow inclined to publish this essay Acknowledgments I began this essay in 1956 During the years I have discussed many of the topics in this volume with a great many philosophers I am indebted to all of them especially those with whom I disagreed and those who disagreed with me One learns nothing from agreement whereas disagreement provokes one to look more closely and more carefully at what is at issue if a philosopher is to profit from discussion someone must be disagreeable **Thought-Contents** Steven E. Boër, 2006-11-23 According to our commonsense view of the matter beliefs desires intentions and the like are special kinds of internal states the possession of which by a creature potentially explains its behavior and otherwise renders the creature intelligible to us So called folk psychology provides us with a rough and ready network of counterfactuals delimiting the role supposedly played by these internal states vis perceptual input inference and behavioral output in a normal member of our species The exact empirical details of this network do not matter here for we are not undertaking further refinement or systematization of the relevant counterfactuals Instead our topic is the ontological analysis of the internal states that occupy the nodes of this complex network and the bearing of that analysis on the truth conditions of the sentences we use to ascribe beliefs and related states The relevant counterfactuals canonically describe particular belief desire and intention states as states of believing desiring and intending that such a creature The use of infinitival clauses to describe desires and intentions is

not really an exception for desiring or intending to do A or to be F is just having a self regarding desire or intention that oneself does A or that oneself is F By the lights of our commonsense psychology then to be in a particular belief desire or intention state is to bear the corresponding attitudinal relation believing desiring or intending to a certain content

Dependencies, Connections, and Other Relations Wim de Muijnck, 2013-03-09 The text before you is a study of the problematic issue of mental causation causation by minds On hearing the expression mental causation you may at first think of something like bending spoons by psychic powers But no we are dealing here with something much more puzzling doing things for reasons i e what we call agency Psychic spoon bending would be a fairly straightforward issue You just exert some psychic force and bend a spoon just like you might bend it by hand i e by physical force The only trouble here is that psychic forces may not be in fact available But now you fetch an umbrella because you expect that it will rain How does that work Some how it seems you let an expectation move your limbs But aren't your limbs already moved by nerve impulses and muscle contractions And are expectations the proper kind of items to move things around Mental causation is an issue that is at the heart of the mind body problem the problem of making it clear how minded creatures such as we are possible and what our mindedness consists in Unlike psychic spoon bending mental causation happens every day At least pretty much of what we take for granted about ourselves can only be right when mental causation really happens **Wholes, Sums and**

Unities A. Meirav, 2013-03-14 According to Ariel Meirav the root of some of our most noteworthy difficulties in the metaphysics of concrete entities has been the traditional tendency to focus on the horizontal dimension of wholes i e relations between the parts of a whole and to neglect the vertical dimension i e relations between the whole itself and its parts In *Wholes Sums and Unities* Meirav formulates a critique of widely accepted mereological assumptions presents a new conception of wholes as Unities and demonstrates the advantages of this new conception in treating a variety of metaphysical puzzles such as that of Tibbles the cat More generally he suggests that conceiving wholes as Unities offers us a new way of understanding the world in non reductive terms *Language, Knowledge, and Representation* Jesus M. Pérez Miranda, 2013-11-09 Every two years since 1989 an international colloquium on cognitive science is held in Donostia San Sebastian attracting the most important researchers in that field This volume is a collection of the invited papers to the Sixth International Colloquium on Cognitive Science ICCS 99 written from a multidisciplinary cognitive perspective and addressing various essential topics such as self knowledge intention consciousness language use learning and discourse This collection reflects not only the various interdisciplinary origins and standpoints of the participating researchers but also the richness fruitfulness and exciting state of research in the field of cognitive science today A must read for anyone interested in philosophy linguistics psychology and computer science and in the perception of these topics from the perspective of cognitive science Locke on Essence and Identity C.H. Conn, 2012-12-06 I first became interested in the relationship

between Locke's anti essentialism and his theory of identity in a first year graduate course on metaphysics taught at

Syracuse University by Jose Benardete I had until then approached Locke as a safe commonsense philosopher whose metaphysical agenda constrained as it was by his concept empiricism was largely geared towards upholding a scientifically enlightened broadly Christian worldview I am greatly indebted to Professor Benardete for disabusing me of this understanding of Locke's work Benardete's Locke was not the Locke that I had been exposed to as an undergraduate not the Locke that I had found in Copleston's History of Philosophy Rather he was a profoundly creative and audacious metaphysician who was justly perceived to be a tremendously dangerous philosopher by his more traditional contemporaries And as much I had admired Copleston's Locke I have become positively enthralled with Benardete's The topics of identity and essentialism have become mainstays of contemporary metaphysics and it is no understatement to say that Locke's contribution to modern debates on these matters is enormous My early interest in Locke's work on essentialism and identity through time was motivated by two factors First although there are a number of obvious and significant conceptual connections between these topics Locke's own theorizing about identity seems not to have been informed by his critique of essentialism or vice versa

Believing and Accepting P. Engel, 2012-12-06 1 Beliefs are involuntary and not nonnally subject to direct voluntary control For instance I cannot believe at will that my trousers are on fire or that the Dalai Lama is a living God even if you pay me a large amount of money for believing such things 2 Beliefs are nonnally shaped by evidence for what is believed unless they are in some sense irrational In general a belief is rational if it is proportioned to the degree of evidence that one has for its truth In this sense one often says that beliefs aim at truth This is why it is on the face of it irrational to believe against the evidence that one has A subject whose beliefs are not shaped by a concern for their truth but by what she wants to be the case is more or less a wishful thinker or a self deceiver 3 Beliefs are context independent in the sense that at one time a subject believes something or does not believe it she does not believe it relative to one context and not relative to another For instance if I believe that Paris is a polluted city I cannot believe that on Monday and not on Tuesday that would be a change of belief or a change of mind but not a case of believing one thing in one context and another thing in another context If I believe something the belief is more or 4 less pennanent across various contexts

Terrorism J. Angelo Corlett, 2012-12-06 This book is the culmination of over 15 years of research on terrorism secession and related concepts such as the obligation to obey the law pacifism civil disobedience non violent direct action political violence revolution and assassination It is sincerely hoped that the content of this book is construed as an ethical and philosophical attempt to advance human understanding of some of life's most intractable problems namely terrorism and more generally political violence This book is proffered as a propadeutic to further study of these issues and is not to be interpreted as the author's final word on them For the pursuit of truth and avoidance of error is never wholly complete but at best a life long process of continual reflection analysis and argument And it will please the author of this book if it brings even a modicum of knowledge to the difficulties it investigates Some of the chapters of this book have been published or have otherwise

experienced the critical assistance of various public academic forums and I am sincerely grateful to those who have shaped my thinking about terrorism and its related concepts Among those who have provided critical and helpful insights concerning various sections of the contents of this book are David Copp Richard Falk Joel Feinberg Richard W Miller and Thomas Pogge

Truth, Rationality, Cognition, and Music K. Korta, Jesús M. Larrazabal, 2013-03-14 A speech for the defence in a Paris murder trial a road safety slogan Hobbes political theory each appeals to reason of a kind but it remains an oblique and rhetorically loaded Each relies on comparisons rather than on direct statements and none can override or supersede the conclusions of ethical reasoning proper Nevertheless just as slogans may do more for road safety than the mere recital of accident statistics or of the evidence given at coroners inquests so the arguments of a Hobbes or a Bentham may be of greater practical effect than the assertion of genuinely ethical or political statements however true and relevant these may be Stephen Toulmin Reason in Ethics 1950 The International Colloquium on Cognitive Science ICCS held in Donostia San Sebastian every two years since 1989 has become one of the most important plazas for cognitive scientists in Europe to present the results of their research and to exchange ideas The seventh edition co organized as usual by the Institute for Logic Cognition Language and Information ILCLI and the Department of Logic and Philosophy of Science both from the University of the Basque Country took place from May 9 to 12 2001 addressing the following main topics 1 Truth Epistemology and Logic 2 Rationality in a Social Setting 3 Music Language and Cognition VIII TRUTH RATIONALITY COGNITION AND MUSIC 4 The Order of Discourse Logic Pragmatics and Rhetoric
