Chemical and Biological Warfare Eric Croddey,2011-06-27 The armaments of chemical and biological warfare CBW as Eric Croddey shows in this introduction for the concerned layman are now widely held not just by nation states but by terrorist and criminal enterprises The weapons themselves are relatively inexpensive and very easy to hide and organizations of just a few dozen people are capable of deploying potentially devastating attacks with them While in the twentieth century most of our arms control effort focused rightly on nuclear arsenals in the twenty first century CBW will almost certainly require just as much attention This book defines the basics of CBW for the concerned citizen including non alarmist scientific descriptions of the weapons and their antidotes methods of deployment and defensive response and the likelihood in the current global political climate of additional proliferation

Ethics and Weapons of Mass Destruction Sohail H. Hashmi,Steven Lee,Steven P. Lee,2004-07-19 Publisher Description

Ballistic Missile Defense In The Post-cold War Era David B H Denoon,2021-11-28 With the end of the Cold War and the visibility of U S Patriot missile defenses during the 1991 Gulf War the cost and benefits of ballistic missile defense systems BMD need to be re evaluated In this detailed and balanced study David Denoon assesses new types of short range and intercontinental missile defenses In the post Cold War era two fundamental changes have made missile defense for the United States and its military forces more compelling The

United States and Russia no longer see each other as direct threats and there has been a dramatic proliferation of ballistic missile capability in the Third World. Consequently U S forces deployed overseas are more likely to be at risk and eventually the United States itself could become vulnerable to missile threats. With these changes in mind David Denoon analyzes the current BMD dilemma arguing that active defenses against missiles should be seen as a form of insurance against catastrophe. He assesses the likelihood of missile attacks and the appropriate level of investment for the United States to defend against such attacks. The book provides an assessment of deterrence and the performance of the Patriot missiles during the 1991 Gulf War, critiques the Strategic Defense Initiative and analyzes the prospects for new types of short range and intercontinental missile defenses.

Security of Public Water Supplies Rolf A. Deininger, Peter Literathy, Jamie Bartram, 2012-12-06. The best of all things is water. Pindar 460 B C. The provision of secure drinking water for its citizens is an aim of every government and is a priority item to all the NATO and CP countries. The quantity of water in most of these countries is usually adequate but the quality in many cases is not. With the development of new analytical methods one suddenly finds new substances of human origin in drinking water. Also new microorganisms and their toxins pass through the conventional treatment plants to show up in the finished water. What aU of this means to public health is not quite clear at the moment but it seems that increased vigilance is necessary to provide safe drinking water to all citizens. The NATO Advanced Research Workshop was organized to focus on five major areas of concern: Inorganic contaminants focusing on arsenic and copper; Organic contaminants focusing on petroleum products and insecticides and pesticides; Biological bacteriological problems in raw water, finished water and in the distribution system; River water watch and surveillance systems; The role of research, the economics of privatization, the support of international organizations. This volume presents the papers that were delivered at the workshop over a period of four and one half days. The workshop was attended by over 40 scientists, government officials and academics from 20 NATO and CP countries.

Weapons of Mass Destruction Eric A. Croddy, James J. Wirtz, Jeffrey A. Larsen, 2004-12-22. The first accessible reference to cover the history, context, current issues and key concepts surrounding biological, chemical and nuclear weapons. A collection of information on everything from aerosols to zones of peace. These two volumes cover historical background, technology and strategic implications of biological, chemical and nuclear weapons, thus providing facts, terms and context needed to participate in contemporary policy debate. This encyclopedia is the only comprehensive reference dedicated to the three types of weapons of mass destruction. With over 500 entries arranged alphabetically, volume one covers biological and chemical weapons while volume two focuses on nuclear weapons. Experts from eight countries cover issues related to these weapons, policies, strategies, technologies, delivery vehicles, arms control, concepts, treaties and key historical figures and locations. Entries are written to make difficult concepts easy to understand by cutting through military and scientific jargon. Students, lay readers, scientists and government policy makers are provided with the broad range of information needed to place today's policy discussions in proper strategic or historical

The SAGE Encyclopedia of War: Social Science Perspectives Paul Joseph,2016-06-15 Traditional explorations of war look through the lens of history and military science focusing on big events big battles and big generals By contrast The SAGE Encyclopedia of War Social Science Perspective views war through the lens of the social sciences looking at the causes processes and effects of war and drawing from a vast group of fields such as communication and mass media economics political science and law psychology and sociology Key features include More than 650 entries organized in an A to Z format authored and signed by key academics in the field Entries conclude with cross references and further readings aiding the researcher further in their research journeys An alternative Reader s Guide table of contents groups articles by disciplinary areas and by broad themes A helpful Resource Guide directing researchers to classic books journals and electronic resources for more in depth study This important and distinctive work will be a key reference for all researchers in the fields of political science international relations and sociology *Biological Warfare Against Crops* S. Whitby,2001-11-12 Until now little attention has been paid to the development of military capabilities designed to target food crops with biological warfare agents This book represents the first substantive study of state run activities in this field It shows that all biological warfare programmes have included a component concerned with the development of anti crop biological warfare agents and munitions Current concern over the proliferation of biological weapons is placed in the context of the initiative to strengthen the Biological and Toxin Weapons Convention The book concludes by arguing that the risks posed by this form of warfare can be minimised but that this would depend largely on the effective and efficient implementation of regimes concerning the peaceful use and control of plant pathogens that pose a risk to human health and the environment Escalation and

Intrawar Deterrence During Limited Wars in the Middle East ,2009 **Biotechnology Research in an Age of Terrorism** National Research Council,Policy and Global Affairs,Development, Security, and Cooperation,Committee on Research Standards and Practices to Prevent the Destructive Application of Biotechnology,2004-03-02 In recent years much has happened to justify an examination of biological research in light of national security concerns The destructive application of biotechnology research includes activities such as spreading common pathogens or transforming them into even more lethal forms Policymakers and the scientific community at large must put forth a vigorous and immediate response to this challenge This new book by the National Research Council recommends that the government expand existing regulations and rely on self governance by scientists rather than adopt intrusive new policies One key recommendation of the report is that the government should not attempt to regulate scientific publishing but should trust scientists and journals to screen their papers for security risks a task some journals have already taken up With biological information and tools widely distributed regulating only U S researchers would have little effect A new International Forum on Biosecurity should encourage the adoption of similar measures around the world Seven types of risky studies would require approval by the Institutional

Biosafety Committees that already oversee recombinant DNA research at some 400 U S institutions These experiments of concern include making an infectious agent more lethal and rendering vaccines powerless **Genethics** David T. Suzuki,Peter Knudtson,1989 Developments in the field of genetics including but not limited to human genetics have brought into being or at least into the realm of plausibility a genetic engineering which is widely perceived to pose a diverse assortment of intricately tangled and in many respects novel ethical problem **Proliferation of weapons of mass destruction : assessing the risks.** ,1993 Since the end of the Cold War the proliferation of weapons of mass destruction has become much more prominent in U S national security and foreign policy planning Revelations about Iraqi North Korean South African and Israeli nuclear weapon programs the possibility of a nuclear arms race in South Asia and the multidimensional conflicts in the Middle East all point to the immediacy of this problem Adding a dangerous new twist is the dissolution of the Soviet Union a superpower armed with nuclear chemical and biological weapons whose successor states are wracked by economic crises and political instability At least three main factors underlie this renewed emphasis on proliferation First the reduced military threat from the former Soviet Union has increased the relative importance of lesser powers especially if armed with weapons of mass destruction Second certain international political and technological trends are increasing the threat to international security from proliferation Third new opportunities are opening for enhancing the current international regimes designed to stem proliferation Since at least as far back as the 1960s when it sponsored the Non Proliferation Treaty NPT the United States has recognized that proliferation is a global problem and combating it requires high levels of international cooperation This country has also exerted unilateral influence successfully in several cases to discourage proliferation it will no doubt continue to do so Nevertheless placing priority on nonproliferation will require the further development and enforcement of international norms and behavior supporting that objective International conditions today offer significant opportunities for such cooperation **Principles of Conflict Economics** Charles H. Anderton,John R. Carter,2019-04-25 Provides comprehensive up to date coverage of the key themes and principles of conflict economics **Architectures of Security** Benjamin J. Muller,Can E. Mutlu,2024-11-19 Architectures of Security Design Control Mobility examines the relationship between architecture security and technology focusing on the way these factors mutually constitute a ferocious architecture an architecture aesthetic or design that is violent forcing the performances and practices of sovereign power and neoliberalism The text provides examples from urban spaces in both the global north and south which discipline the mobility and movement of populations as well as reinforce socioeconomic cleavages From borders and borderlands to airports museums and public buildings the authors portray often inhumane examples of sovereign power
