Radiation Exposure Occupational Risks Medical Radiology Ser:

Radiation Exposure and Occupational Risks Eberhard Scherer, Christian Streffer, Klaus-Rüdiger Trott, 2012-12-06 The aim of radiation protection standards is to make the radiation workplace as safe as is humanly possible The gradual evolution over the last 20 years has been towards a more precise definition of the limits for occupational exposure These have been created not only in terms of short term effects but also more importantly in terms of long term risks involving such problems as the potential for carcinogenesis and genetic change In the United States the National Committee for Radiation Protection has recommended that 5 rems 50 mSv should remain as the maximum permissible dose equivalent for total body exposure This would represent the sum of internal and external exposure and should be regarded as the upper limit allowed The community of radiation users is required to conduct its operations in such a manner that the absolute value of the individual's dose equivalent in rems does not exceed his age in years There should be additional limits for tissues and organs based on short term effects Therefore individual organs are limited to dose equivalents low enough to ensure that the dose threshold values are not exceeded Workbook for Radiation Protection in Medical Radiography - E-Book Mary Alice Statkiewicz

Radiation Health Effects John D. Boice Jr, André Bouville, Lawrence T. Dauer, Ashley P. Golden, Richard Wakeford, 2024-11-25 This book presents original research findings of The Million Person Study of Low Dose Radiation Health Effects MPS the largest and most comprehensive epidemiologic study of its kind to investigate the health effects of low level chronic radiation exposure on American workers and veterans throughout the 20th century Since the early 1900s epidemiologists have studied the consequences of radiation exposures yet the health effects of low levels received gradually over time remain unresolved This uncertainty comes at a time when the public and workers are experiencing ever increasing

levels of radiation exposure from advances in medical radiation imaging techniques e g CT scans frequent flying at high altitudes and environmental and occupational exposures The MPS is providing answers by studying 30 radiation exposed U S populations including workers at nuclear power plants radiologists workers at former Manhattan Project sites nuclear submariners nuclear weapons test participants atomic veterans industrial radiographers and radium dial painters Ongoing for more than 20 years and coordinated by the National Council on Radiation Protection and Measurements Vanderbilt University Medical Center and Memorial Sloan Kettering Cancer Center the MPS is a national effort supported by the Department of Energy National Aeronautics and Space Administration U S Navy Defense Threat Reduction Agency Nuclear Regulatory Commission Centers for Disease Control and Prevention and the Environmental Protection Agency Unparalleled in scope and quality the MPS provides an understanding of low dose health effects that is desperately needed for decision makers and the radiation protection community as society continues to increase the uses of radiation technologies Individual chapters were originally published in the International Journal of Radiation Biology
