Radiation Of Atoms In A Resonant Environment:

Radiation of Atoms in a Resonant Environment V P BYKOV, 1994-01-18 This book is devoted to the modern problems of quantum optics Atomic radiations in free space waveguides cavities and periodical structures are investigated The wavepacket quantum mechanical picture of radiation is stressed and different quantum states of the radiation field are described The analysis of the appearance of coherence in lasers is followed by a discussion of the connection between the form of the Hamiltonian and the initial conditions in the radiation problems The quantum theory of interference is also given and causality in the radiation process is investigated and the resolvent method for radiation problems is also described A new type of laser generator with an extremely narrow spectrum is then proposed Finally problems of the quantum mechanical description of macroscopic body movement are discussed in connection with the observation of squeezed light

Radiation of Atoms in a Resonant Environment Vladimir Pavlovich Bykov, 1993 *Laser Control of Atoms and Molecules* Vladilen Letokhov, 2007-02-15 Rather different problems can be lumped together under the general term laser control of atoms and molecules They include the laser selection of atomic and molecular velocities for the purpose of Doppler free spectroscopy laser control of the position and velocity of atoms i e laser trapping and cooling of atoms and laser control of atomic and molecular processes ionization dissociation with a view of detecting single atoms and molecules and particularly separating isotopes and nuclear isomers Over the last decades the principal problems posed have been successfully solved and many of them have evolved remarkably in the subsequent investigations of the international research community For example the solution of the problem of laser cooling and trapping of atoms has given birth to the new field of the physics of ultracold matter i e quantum atomic and molecular gases The laser non coherent control of uni molecular processes has found an interesting extension in the field of laser coherent control of molecules The concept of laser control of position has been successfully demonstrated with microparticles optical tweezers concurrently with investigations into atomic control The laser photo ionization of molecules on surfaces has led to the development of novel techniques of laser assisted mass spectrometry of macromolecules and so on The aim of this book is to review these topics from a unified or coherent point of view It will be useful for many readers in various fields of laser science and its applications

This book discusses the theory of quantum effects used in metrology and presents the author's research findings in the field of quantum electronics. It also describes the quantum measurement standards used in various branches of metrology such as those relating to electrical quantities, mass, length, time, and frequency. The first comprehensive survey of quantum metrology problems, it introduces a new approach to metrology, placing a greater emphasis on its connection with physics, which is of importance for developing new technologies, nanotechnology in particular. Presenting practical applications of the effects used in quantum metrology for the construction of quantum standards and sensitive electronic components, the book is useful for a broad range of physicists and metrologists. It also promotes a better understanding and approval of the new system in both industry and academia. This second edition includes two new chapters focusing on the revised SI system and satellite positioning systems. Practical realization *mise en pratique* the base units: metre, kilogram, second, ampere, kelvin, candela, and mole, now defined in the revised SI, is presented in detail. Another new chapter describes satellite positioning systems and their possible applications. In satellite positioning systems like GPS, GLONASS, BeiDou, and Galileo, quantum devices, atomic clocks, serve a wide population of users. *Environmental Health Perspectives*, 1993 **Nuclear Science Abstracts**, 1976

Campbell, 1996-12-31 Stringent legislation is forcing manufacturing industry to be aware of the impact its operations have on the environment in order to control and reduce the effect of those operations. Increasingly sophisticated equipment is required for this monitoring and development of that equipment and strategies for its use is a multi-disciplinary field involving chemists, analytical scientists, and engineers. This volume is divided into two parts: the first introducing the reader to the various sensor systems and illustrating the advantages and disadvantages those systems have for monitoring programmes, and the second introducing the problems associated with environmental monitoring and showing how the sensors discussed in the first section can be applied to produce a thorough monitoring programme. Environmental and Low-Temperature Geochemistry Peter Ryan, 2019-12-16 *Environmental and Low Temperature Geochemistry* presents conceptual and quantitative principles of geochemistry in order to foster understanding of natural processes at and near the earth's surface as well as anthropogenic impacts and remediation strategies. It provides the reader with principles that allow prediction of concentration, speciation, mobility, and reactivity of elements and compounds in soils, waters, sediments, and air, drawing attention to both thermodynamic and kinetic controls. The scope includes atmosphere, terrestrial waters, marine waters, soils, sediments, and rocks in the shallow crust; the temporal scale is present to Precambrian and the spatial scale is nanometers to local, regional, and global. This second edition of *Environmental and Low Temperature Geochemistry* provides the most up-to-date status of the carbon cycle and global warming, including carbon sources, sinks, fluxes, and consequences, as well as emerging evidence for and effects of ocean acidification. Understanding environmental problems like this requires knowledge based in fundamental principles of equilibrium, kinetics, basic laws of chemistry and physics, empirical evidence.
