NCRP Report National Council on Radiation Protection and Measurements,1966 **Structural Shielding Design for Medical X-ray Imaging Facilities** National Council on Radiation Protection and Measurements,2004 Report No 147 2004 presents recommendations and technical information related to the design and installation of structural shielding for facilities that use x rays for medical imaging The purpose of structural shielding is to limit radiation exposure to employees and members of the public The information supersedes the recommendations that address such facilities in NCRP Report No 49 Structural Shielding Design and Evaluation for Medical Use of X Rays and Gamma Rays of Energies Up to 10 MeV which was issued in September 1976 NCRP Report No 147 includes a discussion of the various factors to be considered in the selection of appropriate shielding materials and in the calculation of barrier thicknesses The Report presents the fundamentals of radiation shielding discusses shielding design goals for controlled and uncontrolled areas in or near x ray imaging facilities and defines the relationship of these goals to the NCRP effective dose limits for radiation workers and members of the public The Report includes a detailed discussion of the recommended shielding design methodology for x ray imaging facilities and provides an extensive collection of shielding data and sample shielding calculations for various types of x ray imaging facilities The Report is mainly intended for those individuals who specialize in radiation protection However it will also be of interest to architects hospital administrators and related professionals concerned with the planning of new facilities that use x rays for medical imaging *Management of Radionuclide Therapy Patients* National Council on Radiation Protection and Measurements,National Council on Radiation Protection and Measurements. waves at the beginning of the text thus integrating coverage of ionizing and nonionizing radiation rather than considering them as two separate disciplines He goes on to cover the entire spectrum of radiation sources including radionuclides x ray machines accelerators nuclear reactors power lines microwave towers and cellular phones With its expanded coverage including a broader focus on public health issues this new volume will serve as an important training and reference resource not only for research scientists physicians and engineers but for regulatory officials attorneys engineers and environmental health and safety professionals The breadth of citations alone makes this resource invaluable
