Challenges in Radiation Protection and Nuclear Safety Regulation of the Nuclear Legacy Malgorzata Sneve, Mikhail F. Kiselev, 2008-07-19 A NATO workshop was held in September 2007 under the Security through Science framework to consider the current challenges in regulation of the nuclear legacy The overall objective was to share East West competence and experience in radiation protection and nuclear safety supervision of installations built during the cold war particularly in relation to regulatory strategies for safe decommissioning of unique or unusual nuclear facilities and remediation activities There were over 60 participants from 8 countries as well as representatives from the International Commission on Radiological Protection the International Atomic Energy Agency and NATO The organisations involved included regulatory authorities operators and technical support organizations The new Russian Federation Unified State Programme for Handling Spent Fuel and Radioactive Waste was introduced and the steps necessary to set this up as a comprehensive programme of activities were described Some waste management sites are in a poor state Legacy management experience was provided from the UK France and the USA Information was provided on methods for site characterisation and separation of wastes into exempt low level and intermediate level waste and the complication of dealing at the same time with chemical hazards such as beryllium

Strategies for contaminated site management were also explained and the associated risk assessment methods outlined. The Russian Federation has responsibility to manage its own nuclear legacy. But it is also one of several countries in the global network of nuclear activities. Harmonisation of approaches is valuable in building future cooperation but local conditions may influence the best local solution. Accordingly future exchanges such as those provided for by this workshop should be encouraged. There are many complex issues to be addressed and they cannot all be solved at once. Clear recognition of the major threats as well as weakness in regulatory processes can be useful in directing future resources. However at this stage it is clear that there are specific regulatory issues to address as well as a need to maintain development of an enhanced overall safety culture. Such guidance needs to be thoroughly based on the best use of scientific and technical information. At the same time part of the solution relates to policy issues and value judgements and so broader interaction among regulators operators and other stakeholders is to be encouraged.

Radiation Protection Programmes for the Transport of Radioactive Material IAEA, 2023-11-09 This Safety Guide provides recommendations on meeting the requirements established in IAEA Safety Standards Series No SSR 6 Rev 1 Regulations for the Safe Transport of Radioactive Material 2018 Edition for a radiation protection programme for the transport of radioactive material. The objectives of a radiation protection programme for the transport of radioactive material are to provide for adequate consideration of radiation protection measures in transport to ensure that the system of radiological protection is adequately applied to enhance a safety culture in the transport of radioactive material and to provide practical measures to meet these objectives. The recommendations provided in this Safety Guide are applicable to the transport of radioactive material by all modes on land water or in the air including transport that is incidental to the use of the radioactive material. The intended audience for this Safety Guide includes competent authorities consignors carriers consignees and operators of ports e.g. harbours seaports and airports. It will also be of interest to the employees of public authorities customs authorities harbour authorities port authorities concerning activities associated with the transport of radioactive material that involve radiation exposure.
