Steele, 1975 *Effects of Nickel on Irradiation Embrittlement of Light Water Reactor Pressure Vessel Steels* International Atomic Energy Agency, 2005 This publication sets out the findings of a co-ordinated research project to determine the influence of the mechanism of the deterioration effect in radiation embrittlement of reactor pressure vessel steels with a high nickel content in nuclear power plants including procurement of materials determination of mechanical properties irradiation and testing of specimens and microstructural characterisation *Radiation Embrittlement of Nuclear Reactor Pressure Vessel Steels* Lendell E. Steele, 1986 *Irradiation Embrittlement of Reactor Pressure Vessels (RPVs) in Nuclear Power Plants* Naoki Soneda, 2014-09-01 Reactor Pressure Vessels (RPVs) contain the fuel and therefore the reaction at the heart of nuclear power plants. They are a life-determining structural component; if they suffer serious damage, the continued operation of the plant is in jeopardy. This book critically reviews irradiation embrittlement, the main degradation mechanism affecting RPV steels, and mitigation routes for managing the RPV lifetime. Part I reviews RPV design and fabrication in different countries, with an emphasis on the materials, their important properties, and manufacturing technologies. Part II then considers RPV embrittlement in operational nuclear power plants using different reactors. Chapters are devoted to embrittlement in light water reactors, including WWER-type reactors and Magnox reactors. Finally, Part III presents techniques for studying embrittlement, including irradiation simulation techniques, microstructural characterisation techniques, and probabilistic fracture mechanics. *Irradiation Embrittlement of Reactor Pressure Vessels (RPVs) in Nuclear Power Plants* provides a thorough review of an issue that is central to the safety of nuclear power generation. The book includes contributions from an international team of experts and will be a useful resource for nuclear plant operators and managers, relevant regulatory and safety bodies, nuclear metallurgists, and other academics in this field. Discusses reactor pressure vessel (RPV) design and the effect irradiation embrittlement can have on the main degradation mechanism affecting RPVs. Examines embrittlement processes in RPVs in different reactor types, as well as techniques for studying RPV embrittlement **Radiation Embrittlement of Spanish Nuclear Reactor Pressure Vessel Steels** A. Ballesteros, J.

Bros,A. López,1993 Commercial pressurized water reactor PWR and boiling water reactor BWR nuclear power plants contain a series of pressure vessel steel surveillance capsules as the principal means of monitoring radiation effects on the pressure vessel Changes in fracture toughness are more severe in surveillance capsules than in reactor vessel materials because of their proximity of the reactor core Therefore it is possible to predict changes in fracture toughness of the reactor vessel materials **Effects of Radiation on Materials** Stan T. Rosinski,2001 Integrity of Reactor Pressure Vessels in Nuclear Power Plants ,2009 This publication is intended to assist nuclear utilities in optimizing the service life of nuclear power plants It reviews the latest research on the effects of neutron irradiation on the steels and welds of reactor pressure vessels within light water cooled and moderated reactors *Effects of Radiation on Materials* , **Radiation Embrittlement of Nuclear Reactor Pressure Vessel Steels** L.E. Taboada,1994 Neutron radiation embrittlement of nuclear reactor vessels continues to be a major concern of the USNRC Research is sponsored for improving understanding of radiation embrittlement effects to predict margins of safety and to improve regulations Regulatory issues that are affected by neutron embrittlement are examined and related to NRC research Factors that control radiation embrittlement are examined A comprehensive collection of radiation embrittlement data from surveillance reports and other published reports has been compiled in a computerized data base PR EDB Fracture toughness data for irradiated pressure vessel steel has provided the basis for crack initiation and crack arrest toughness curves Work is in place to improve our ability to predict thermal annealing recovery and reembrittlement Areas where additional data are needed are described **Analysis of Reactor Vessel Radiation Effects Surveillance Programs** Lendell E.
