*The Great American Biotic Interchange* Francis G. Stehli, S. David Webb, 2013-03-09 Two rather different elements combine to explain the origin of this volume one scientific and one personal The broader of the two is the scientific basis the time for such a volume had arrived Geology had made remarkable progress toward an understanding of the physical history of the Caribbean Basin for the last 100 million years or so On the biological side many new discoveries had elucidated the distributional history of terrestrial organisms in and between the two Americas Geological and biological data had been combined to yield the timing of important events with unprecedented resolution Clearly when each of two broad disciplines is making notable advances and when each provides new insights for the other the rewards of cross disciplinary contacts increase exponentially The present volume represents an attempt to bring together a group of geologists paleontologists and biologists capable of exploiting this opportunity through presentation of an interdisciplinary synthesis of evidence and hypothesis concerning interamerican connections during the Cretaceous and Cenozoic Advances in plate tectonics form the basis for a modern synthesis and in the broadest terms dictate the framework within which the past and present distributions of organisms must be interpreted Any scientific discipline must seek tests of its conclusions from data outside of its own confines

History of Cenozoic Mammals from South America

Federico Agnolin, 2024-04-23

The Cenozoic history of South American faunas mainly rests on the evidence yielded by the study of fossil mammals Following the seminal work of William D. Matthew George G. Simpson established the slogan 'Splendid Isolation' for describing the evolutionary history of South American faunas He envisaged South America as well as other Southern Hemisphere landmasses as dead ends in the evolution and geographical expansion of animals and plants that since the Mesozoic come in successive migratory waves from the North More than 40 years passed away from the last important contribution by Simpson 1980 Since then in spite to the exponential increase in biological paleontological and geological knowledge and an incredibly new number of fossils his scheme remained almost unpolluted and most recent books regarding the palaeobiogeography of South American vertebrates follow this paradigm nearly without criticism However the fact that South America was joined to Africa Australia Antarctica and India during most of the Cretaceous and that it was still connected to Australia via Antarctica and probably Africa up to the Paleogene together with the large number of shared biotic components between these landmasses point in favor of a different paleobiogeographical scenario The book aims to demonstrate that during the Paleogene and most of the Neogene the nature and evolutionary history of South American vertebrates is by far much more intricate than previously envisaged As will be shown new evidence suggests that southern landmasses may have played an important role in the early evolution and radiation of extant mammal clades This book is not written to conform with the ideal of a technical manual or a

review and is not carried forward to collect all that has been said before The main goals are to criticize the current Palaeobiogeographic Model of Vertebrate Settlement of South America and to propose a new vision based on the evidence provided by the natural world in the last decades *A New Crocodilian from the Upper Jurassic Morrison Formation of Western Colorado* James Matthew Clark,1985 **The Zoological Record** ,1982 Zoological Record is published annually in separate sections The first of these is Comprehensive Zoology followed by sections recording a year s literature relating to a Phylum or Class of the Animal Kingdom The final section contains the new genera and subgenera indexed in the volume Each section of a volume lists the sections of that volume **Arquivos do Museu Nacional** Museu Nacional (Brazil),2008 Dinosaurian Faunas of China Zhiming Dong,1992-04-13 This text describes all dinosaur genera ever found in China and gives their characteristics stratigraphic occurrence and a brief history of their discovery The author also introduces a comprehensive classification of all Chinese dinosaurs **Philosophical Transactions** ,1993 Each issue of Transactions B is devoted to a specific area of the biological sciences including clinical science All papers are peer reviewed and edited to the highest standards Published on the 29th of each month Transactions B is essential reading for all biologists **Cranial Morphology of Alligator Mississippiensis and Phylogeny of Alligatoroidea** Timothy Rowe,Christopher Andrew Brochu,Kyoko Kishi,1999 Journal of Vertebrate Paleontology ,2009 **Transactions of the Kansas Academy of Science** Kansas Academy of Science,2007 **Inventaire des thèses de doctorat soutenues devant les universités françaises** ,1981 **Revista - Instituto de Geología** Universidad Nacional Autónoma de México.
