Radiotherapy Of Malignant Disease

Jean-Paul Sculier, Willard A. Fry

Radiotherapy Of Malignant Disease:

The Radiotherapy of Malignant Disease E.C. Easson, R.C.S. Pointon, 2012-12-06 Radiotherapy or radiation therapeutics as the name suggests is a branch of general therapeutics In this case the therapeutic agent is ionising radiation which induces specific and predictable biological changes Radiotherapy is sometimes described as therapeutic radiology because historically the earliest X ray machines were used both for diagnostic and therapeutic purposes Diagnostic radiology has since become a very complex and time consuming speciality requiring the undivided care and attention of the diagnostic radiologist Similarly radiotherapy now embraces both X ray beams and the radiations from radium and various artificial radium substitutes This too requires the full time attention of the radiotherapist In recent years radiotherapy has sometimes been described as radiotherapeutic oncology to indicate the involvement of the radiotherapist in oncological management and indeed in all aspects of oncology from prevention and early detection to the treatment after care and for those who need it terminal care of the patient The radiotherapist by total commitment to the cancer problem is in truth the epitome of the oncologist In the same way as the medical physician or internist requires a proper understanding of the pharmacology of the therapeutic agents he or she employs the nature metabolic biochemistry and biological effects of any administered drug so also the radiotherapist needs to understand the nature biological effects and therapeutic potentialities of ionising radiations The radiotherapist's pharmacology involves an understanding of the relevant physics and radiobiology *The Radiotherapy of Malignant Disease* R.C.S. Pointon, 2012-12-06 Radiotherapy as practiced at the renowned Christie Hospital and Holt Radium Institute is brought up to date in this new second edition of *The Radiotherapy of Malignant Disease* The contributions are all written by current or former members of the hospital staff The opening chapters provide the necessary background information basic physics and radiobiology principles of chemotherapy and mould room practice The main part of the book represents the very essence of the Manchester school of thought It is designed to show in detail how to treat by X rays and radium malignant tumors in various anatomical sites The book thus gives practical guidance on clinical techniques necessary in all disciplines involved in the management of malignant disease From the reviews of the first edition It should be in the library of every radiotherapy department and in the hands of every trainee British Medical Journal 1 This book should be an important and interesting reference book on the shelves of any medical library or radiotherapist's office American Journal of Roentgenology 2 There can be few established radiotherapists described by the editors as the epitome of the oncologist who did not read the earlier versions of the Manchester textbook and may still use it for reference This latest edition is costly but it should continue to be read by all trainees aspiring to the DMRT and FRCR wherever they may be in training and whatever the philosophy of their teachers Journal of the Royal Society of Medicine 3 *The Radiotherapy of Malignant Disease* R. Treatment of Malignant Disease by Radiotherapy Ralston Paterson, 1963 Radiotherapy for Non-Malignant Disorders Michael Heinrich Seegenschmiedt, Hans-Bruno Makoski, Klaus-Rüdiger Trott, Luther W. Brady, 2009-04-15 Non malignant or benign diseases can be successfully treated using ionizing radiation technologies It was first proposed in 1898 by Sokoloff who reported the analgesic effects of radiotherapy for painful rheumatoid arthritis Since then the use of these techniques for painful muscle skeletal diseases has gained acceptance particularly in Europe but is still carried out actively in the United States Non malignant diseases that are amenable to radiotherapy can be classified as inflammatory degenerative hyperproliferative functional or other disorders However the topographic and morphologic considerations are more relevant Even though radiation therapy for benign diseases has not been pursued actively since the 1950s more recent interest has dictated that it can be a very effective treatment modality The use of radiotherapy can be justified for invasive and aggressive growth such as that seen with desmoids for cosmetic deformations and functional loss as seen with keloids or endocrine orbitopathy or for life threatening complications such as hepatic hemangiomas or juvenile angiofibromas that occur in children or adolescents Many of the non malignant diseases can have a major and lasting effect on quality of life by causing pain or other serious symptoms particularly when other methods of treatment are unavailable have failed or may induce more side effects It is not generally the first choice of therapy in these non malignant diseases but it is acceptable as defined The book edited by Seegenschmiedt et al *The Treatment of Malignant Disease by Radiotherapy* James Ralston Kennedy Paterson, Ralston Paterson, 1963 *Research Awards Index* , Nuclear Science Abstracts , 1966 **Index-catalogue of the Library of the Surgeon-General's Office, United States Army** National Library of Medicine (U.S.), 1972 Quarterly Cumulative Index to Current Medical Literature , 1922 Quarterly Cumulative Index to Current Medical Literature.
