Making a Green Machine Finn Arne Jørgensen, 2011-07-11 Consider an empty bottle or can one of the hundreds of billions of beverage containers that are discarded worldwide every year Empty containers have been at the center of intense political controversies technological innovation processes and the modern environmental movement Making a Green Machine examines the development of the Scandinavian beverage container deposit refund system which has the highest return rates in the world from 1970 to present Finn Arne Jørgensen investigates the challenges the system faced when exported internationally and explores the critical role of technological infrastructures and consumer convenience in modern recycling His comparative framework charts the complex network of business and political actors involved in the development of the reverse vending machine RVM and bottle deposit legislation to better understand the different historical trajectories empty beverage containers have taken across markets including the U S The RVM has served as more than a hole in the wall it began simply as a tool for grocers who had to handle empty refillable glass bottles but has become a green machine to redeem the empty beverage container helping both business and consumers participate in environmental actions

Consumerism, Waste, and Re-Use in Twentieth-Century Fiction Rachele Dini, 2016-10-21 This book examines manufactured waste and remaindered humans in literary critiques of capitalism by twentieth century writers associated with the historical avant garde and their descendants Building on recent work in new materialism and waste studies Rachele Dini reads waste as a process or phase amenable to interruption From an initial exploration of waste and re use in three Surrealist texts by Giorgio de Chirico Andr Breton and Mina Loy Dini traces the conceptualization of waste in the writing of Samuel Beckett Donald Barthelme J G Ballard William Gaddis and Don DeLillo In exploring the relationship between waste capitalism and literary experimentation this book shows that the legacy of the historical avant garde is bound up with an enduring faith in the radical potential of waste The first study to focus specifically on waste in the twentieth century imagination this is a valuable contribution to the expanding field of waste studies

Effluent America Martin V. Melosi, 2001-09-02 What s the difference between an anthill and a city Protection from weather and predators living and

working quarters transportation networks food storage capability all these they hold in common And while there are obvious differences between humans and ants both exist in the same space and time dimension in nature This simple idea imagining cities as part of the larger physical world has driven the work of the historian Martin Melosi for twenty five years Melosi is one of a handful of scholars who examine urban history from an ecological perspective using the city to help define the place of nature in human life Cities he maintains are places where humans live work play consume goods and make waste just as humans have in caves on farms and in villages To imagine the city as outside of nature limits what can be known about our past and our future Effluent America is a collection of essays spanning this innovative scholar s career and the growing field of urban environmental history Garbage wastewater hazardous waste these are the lenses through which Melosi views nineteenth and twentieth century America In broad overviews and specific case studies Effluent America treats the relationship between industrial expansion and urban growth from an ecological perspective He charts the development of city services the rationale for their implementation and how they affected growth He explores the environmental impacts of unprecedented methods of production the influence of new forms of energy and changing patterns of consumption during the Industrial Revolution and beyond In so doing he traces how one of the richest nations in the world became also the most wasteful a juxtaposition of affluence and effluence Other essays consider the important role of American cities in the history of the conservation and environmental movements Melosi sketches the reforms and reformers born out of such urban quality of life issues as pollution sanitation public health and the need for greenspace He also profiles the environmental justice movement whose response to environmental problems is a question Who bears the most risk Urban environmental history is a window on the past but it also directly informs issues of the present public health pollution the role of government in delivering services etc Effluent America is an important volume for students of history and urban affairs as well as for policymakers and all those concerned about the one world we inhabit

The Environmental Unconscious in the Fiction of Don DeLillo Elise Martucci, 2012-09-10 This book presents an ecocritical reading of DeLillo s novels in an attempt to mediate between the seemingly incompatible influences of postmodernism and environmentalism Martucci argues that although DeLillo is responding to and engaging with a postmodern culture of simulacra and simulation his novels do not reflect a postmodernist theory of the end of nature Rather his fiction emphasizes the lasting significance of the natural world and alerts us to the dangers of destroying it In order to support this argument Martucci examines DeLillo s novels in the context of traditional American literary representations of the environment especially through the lens of Leo Marx s discussion of the conflict between technology and nature found in traditional American literature She demonstrate that DeLillo s fiction explores the way in which new technologies alter perceptions and mediate reality to a further extent than earlier technologies however she argues that he keeps the material world at the forefront of his novels thereby illuminating the environmental implications of these technologies Through close readings of Americana The Names White Noise and

Underworld and discussions of postmodernist and ecocritical theories this project engages with current criticism of DeLillo postmodernist fiction and environmental criticism

Materials Matter Ken Geiser, 2001-05-25 The products we purchase and use are assembled from a wide range of naturally occurring and manufactured materials But too often we create hazards for the ecosystem and human health as we mine process distribute use and dispose of these materials Until recently most research has focused on the waste end of material cycles This book argues that the safest and least costly point at which to avoid environmental damage is when materials are first designed and selected for use in industrial production *Materials Matter* presents convincing evidence that we can use fewer materials and eliminate the use of many toxic chemicals by focusing directly on material chemical use when products are designed It also shows how manufacturers can save money by increasing the effectiveness of material use and reducing the use of toxic chemicals It advocates new directions for the material sciences and government policies on materials And it argues that manufacturers suppliers and customers need to set more socially responsible policies for products and services to achieve higher environmental and health goals

The Waste Crisis Hans Y. Tammemagi, 1999-12-16 As populations continue to increase society produces more and more waste Yet it is becoming increasingly difficult to build new landfills and the existing landfills are causing significant environmental damage Finding solutions is not simple the problem is enormous in size vital in terms of its impact on the environment and complex in scope This book provides a vast look at solid waste management in North America and seeks solutions to the waste crisis It describes the magnitude and complexity of the problem focusing on municipal wastes and placing them in the perspective of other wastes such as hazardous biochemical and radioactive debris It describes the components of an integrated waste management program including recycling composting landfills and waste incinerators and it presents in detail the scientific and engineering principles underlying these technologies To illustrate both the problems and solutions of waste management programs the authors provide seven case histories among them the Fresh Kills Staten Island New York the East Carbon Landfill Utah and the Lancaster County Municipal Waste Incinerator Pennsylvania The Waste Crisis is unique in its attempt to analyze waste management in a broader societal context and to propose solutions based on basic principles And by doing so it encourages readers to challenge commonly held perceptions and to seek new and better ways of dealing with waste As such this book deserves a place on the bookshelf of anyone who deals with or feels the need to confront the growing problems of waste management

The U. S. Paper Industry and Sustainable Production Maureen Smith, 1997-03-12 The problems recyclers face with wastepaper are connected to the issues addressed by forest advocates as well as to the difficulties confronted by those involved with

industrial pollution from the paper industry In this richly detailed study Maureen Smith shows how industrial and environmental analysis can be synthesized to clarify these complex problems and produce solutions Smith outlines the basic structural characteristics of the U S pulp and paper industry and its relationship to the larger forest products sector as well as its patterns of domestic and global fiber resource use She then reviews the core technologies employed in virgin pulp production with an emphasis on their environmental impacts the role of technological innovation and the relationships between fiber choices and pollution prevention Building on this base she reveals structural barriers within the industry that have impeded positive change and shows how these barriers are reinforced by the traditional isolation of environmental policy domains The study includes a comparative analysis of how organochlorine pollution from pulp mills has been addressed in the United States Europe and Canada and why the United States has seen the slowest rate of progress an assessment of commodity trade patterns in the industry and how they are linked to resource demand an examination of the momentum building around annual plant fiber use and the diverse interests it reflects and a review of recent developments in paper recycling within the context of historical trends in fiber utilization A case study of the controversial environmental review process of the largest recycled pulp and paper mill ever proposed ties together earlier elements of the book and forms the basis for the conclusions In closing Smith argues convincingly against narrowly focused attempts to fix the problems associated with the industry and offers practical guidance on new frameworks and approaches for industrial restructuring She highlights the need for regional perspectives that integrate environmental social and economic objectives

Walsh,Rex Warland,2010-11-01 When first proposed in this country during the 1970s waste to energy WTE incinerators appeared to be ideal solutions to the growing mounds of trash in our throw away society Promising to convert useless garbage into electricity while saving precious landfill space trash incinerators seemed perfectly timed to respond to a national need Within a decade however a grassroots anti incineration movement emerged as a vibrant offshoot of the environmental movement In Don t Burn It Here sociologists

Edward Walsh Rex Warland and D Clayton Smith examine this grassroots movement through detailed analyses of the struggles surrounding proposals to build eight municipal incinerators in Pennsylvania New York and New Jersey The eight case histories that form the heart of the book are comparable to hundreds of others across the U S The authors research is based on interviews focus group discussions extensive newspaper files and questionnaire responses from participants on both sides of the conflicts A final chapter examines the similarities and differences between the three successful projects and the five defeated ones An overview of the history of the modern incinerator in the U S and the emergence of a major national opposition movement provides the necessary context and throughout the book the authors make useful comparisons to other national movements seeking legal justice for deprived collectivities such as women and ethnic groups This project was supported by a grant from the Ford Foundation s Fund for Research in Dispute Resolution Striving to maintain a balanced treatment of both sides of the incinerator battles the authors provide fresh theoretical and methodological perspectives on a new type of collective action They also help to close the gap between theory and empirical data in the social sciences
