Barnett Pearce, 1989 Starting with the premise that we live in communication rather than standing outside communication and using it for secondary purposes Pearce claims that people who live in various cultures and historical epochs not only communicate differently but experience different ways of being human because they communicate differently This century he notes ushered in the communication revolution the discovery that communication is far more important and central to the human condition than ever before realized Essential to the communication revolution is the recognition that multiple forms of discourse exist in contemporary human society Further these forms of discourse are not benign they comprise alternative ways of being human Thus communication theory must encompass all that it means to live a life the shape of social institutions and cultural traditions the pragmatics of social action and the poetics of social order **Making Social Worlds** W. Calvin, 2014-11-25 If you re good at finding the cognition in human computer interaction one right answer to life s multiple choice questions you re smart But intelligence is what you need when contemplating the leftovers in the refrigerator trying to figure out what might go with them or if you re trying to speak a sentence that you ve never spoken before As Jean Piaget said intelligence is what you use when you don't know what to do when all the standard answers are inadequate This book tries to fathom how our inner life evolves from one topic to another as we create and reject alternatives Ever since Darwin we ve known that elegant things can emerge indeed self organize from simpler beginnings

And says theoretical neurophysiologist William H Calvin the bootstrapping of new ideas works much like the immune response or the evolution of a new animal species except that the brain can turn the Darwinian crank a lot faster on the time scale of thought and action Drawing on anthropology evolutionary biology linguistics and the neurosciences Calvin also considers how a more intelligent brain developed using slow biological improvements over the last few million years Long ago evolving jack of all trades versatility was encouraged by abrupt climate changes Now evolving intelligence uses a nonbiological track augmenting human intelligence and building intelligent machines **NIVAC Bundle 7: Pauline** Epistles Douglas J.
