A. Simpson, 2004 Between 1880 and 1940 California cities were in the vanguard in creating comprehensive city plans and zoning ordinances that came to characterize modern American city growth This book reveals the means by which property owning middle class women achieved entry into the male dominated sphere of urban planning It suggests that women in

California were not excluded from public life. Instead they embraced the middle class ideology of propertied self interest and participated to the fullest extent possible in the urban struggle for regional dominance that shaped this period of western history. Likewise as urban historians have presented this story as essentially male this work suggests that although California's urban elite often maintained a division of labor along traditional gender lines they clearly worked in a cross gender alliance to shape a regional identity based on a commitment to urban growth. How Architecture Works Witold

Rybczynski, 2013-10-08 An essential toolkit for understanding architecture as both art form and the setting for our everyday lives. We spend most of our days and nights in buildings living and working and sometimes playing. Buildings often overawe us with their beauty. Architecture is both setting for our everyday lives and public art form but it remains mysterious to most of us. In How Architecture Works Witold Rybczynski one of our best most stylish critics and winner of the Vincent Scully Prize for his architectural writing answers our most fundamental questions about how good and not so good buildings are designed and constructed. Introducing the reader to the rich and varied world of modern architecture he takes us behind the scenes revealing how architects as different as Frank Gehry, Renzo Piano and Robert A M Stern envision and create their designs. He teaches us how to read plans how buildings respond to their settings and how the smallest detail of a stair balustrade for instance can convey an architect's vision. Ranging widely from a war memorial in London to an opera house in St Petersburg from the National Museum of African American History and Culture in Washington D C to a famous architect's private retreat in downtown Princeton How Architecture Works explains the central elements that make up good building design. It is an enlightening humanist's toolkit for thinking about the built environment and seeing it afresh. Architecture if it is any good speaks to all of us. Rybczynski writes. This revelatory book is his grand tour of architecture today. **Catalog of the Avery**

Mediterranean Marc Appleton, 2007 In the early 20th century architects designing houses for the balmy climate of Southern California were influenced by the style of the villas and palaces that dominated the architecture of Italy, France, Spain, Greece and Morocco and a few other North African locales. The resulting style noted for its pleasing combination of simplicity and dignity for its often asymmetrical undecorated facades reflected romantic European forms and yet distinguished itself by adding American ingenuity. Prime examples of this include Villa Narcissa widely celebrated for its unimposing grandeur and Casa Leon with its stunning hillside location and ocean views. Included here are residences by noted architects such as Julia Morgan, Bertram Goodhue, Addison Mizner, George Washington Smith, Wallace Neff and others. While some of the houses are lavishly decorated villas with lush landscaping others are more spare creations. What all these interpretations of the California Mediterranean style have in common is an indoor outdoor approach to living. *Captivating California Charm:*
