Through in-depth longitudinal studies of global corporations, the book presents a new theoretical framework and implications for IT-enabled dynamic capabilities using collaboration systems from the perspective of micro strategy theory and organization theory. The content of the book is based on longitudinal analyses that employ various qualitative research methods including ethnography, participant observation, action research and in-depth case studies of global corporations in Europe, the United States and Asia that actively use collaboration systems. It presents a new concept of micro dynamism whereby dynamic IT-enabled knowledge communities such as IT-enabled communities of practice and IT-enabled strategic communities create IT-enabled dynamic capabilities through the integration of four research streams: an information systems view, micro strategy view, micro organization view and knowledge based view. The book demonstrates that collaboration systems create, maintain and develop IT-enabled knowledge communities within companies and are strategic IT applications for enhancing the competitiveness of companies in the ongoing creation of new innovation and the realization of sustainable growth in a 21st century knowledge based society. This book is primarily written for academics, researchers and graduate students but will also offer practical implications for business leaders and managers. Its use is anticipated not only in business and management schools, graduate schools and university education environments around the world but also in the broad business environment including management and leadership development training.

An Introduction to Building Procurement Systems Jack Masterman, 2003-09-02 First Published in 2003 Building procurement systems are the organizational structures needed to design and construct building projects. The intention of this guide is to provide the construction professional with sufficient information about building procurement systems to ensure an awareness of the main methods that are currently available and their principal advantages and disadvantages. Chapters 1 and 2 describe the concept and categorization of procurement systems and the evolution of the methods currently in use. The next four chapters deal with each of the various categories and the individual systems themselves. The needs of clients are examined in Chapter 7 in the context of project success. Chapter 8 investigates the way in which clients decide which procurement method to use. The author then identifies the principles governing the current choice and the various aids that are available to assist clients.

during this decision process Finally in Chapter 9 the author attempts to forecast the future of procurement systems and their use This clear well researched and well structured guide will be invaluable to students and practising construction professionals alike as they work with a range of building procurement systems to choose the system most suited to their needs
