Santhekadur, Bubu Ama Banini ,Rohini Mehta, 2024-09-19 Hepatocellular carcinoma HCC is the most common cancer of the liver and the third most cause of cancer related deaths worldwide The 5 year survival of HCC is less than 20% making HCC the second most lethal malignancy the first being pancreatic cancer HCC usually occurs in patients with chronic liver disease in association with a variety of risk factors including chronic liver infection with hepatitis B virus or hepatitis C virus excessive consumption of alcohol overeating obesity and nonalcoholic fatty liver disease

other metabolic liver diseases including Wilson's disease, hemochromatosis and alpha 1 antitrypsin deficiency and environmental toxins such as aflatoxins. Tobacco use and human immunodeficiency virus infection also increases the risk of HCC. The heterogeneity of HCC associated with different etiologies affects tumor initiation, development and progression, thus limiting the identification of consistent or routinely occurring genetic abnormalities characteristic of this malignancy. Nevertheless, sustained inflammation, hepatocyte regeneration and apoptosis occurring in chronic liver disease results in fibrosis and ultimately cirrhosis, favoring genetic and epigenetic modifications that lead to the formation of dysplastic nodules and eventually oncogenesis. Identification of novel diagnostic and prognostic biomarkers for HCC is an unmet need in this current era. The aim of this Research Topic is to provide insights on novel aspects of HCC diagnosis, prognostication and therapy, with an emphasis on recent and up-to-date findings from the scientific literature. Genetic and molecular signatures arising from HCC in association with specific etiologies and implications for cancer screening and surveillance will be discussed. As indicated, sub-topics listed below: Original articles, Reviews and Mini Review articles will address all areas of HCC relevant not only to basic and clinical researchers but also to practitioners in various fields of medicine.

- 1 Epidemiology of Hepatocellular carcinoma
- 2 Risk factors for hepatocellular carcinoma
- 3 Nonalcoholic Fatty Liver Disease and Hepatocellular Carcinoma
