theoretical foundations real world cases and future directions the volume covers a diverse collection of the newest innovations in the field including new research on atomic nuclear physics the barometric formula amino acids in aqueous solutions bioremediation and biotechnology and more Recent Research Developments in Chemical Engineering ,2005

Beyond the Molecular Frontier National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Committee on Challenges for the Chemical Sciences in the 21st Century, 2003-03-19 Chemistry and chemical engineering have changed significantly in the last decade They have broadened their scope into biology nanotechnology materials science computation and advanced methods of process systems engineering and control so much that the programs in most chemistry and chemical engineering departments now barely resemble the classical notion of chemistry Beyond the Molecular Frontier brings together research discovery and invention across the entire spectrum of the chemical sciences from fundamental molecular level chemistry to large scale chemical processing technology This reflects the way the field has evolved the synergy at universities between research and education in chemistry and chemical engineering and the way chemists and chemical engineers work together in industry The astonishing developments in science and engineering during the 20th century have made it possible to dream of new goals that might previously have been considered unthinkable This book identifies the key opportunities and challenges for the chemical sciences from basic research to societal needs and from terrorism defense to environmental protection and it looks at the ways in which chemists and chemical engineers can work together to contribute to an improved future Advances in Chemical Engineering Guy B. Marin, 2011-09-21 Understanding and modeling the kinetics of chemical reactions is crucial to any research and development effort aimed at process optimization and innovation This volume of Advances in Chemical Engineering provides four complementary points of view It reflects state of the art developments as well as views on the way to proceed by reporting on the efforts of a representative sample of research and development groups A first contribution by W H Green Jr sets the scene The author advocates a paradigm shift in chemical kinetics from postdictive to predictive models The contribution from the Politecnico di Milano reports on the tremendous experience accumulated over the years in the field of steam cracking one of the largest scale production processes of the petrochemical industry The Russian school of chemical kinetics is represented by a chapter on oxidation of alkanes this contribution addresses more philosophical issues The last chapter gives an indication of the state of the art in an industrial environment Provides original reviews Presents leading chemical engineers as authors Reviews state of the art developments
