Remediation of Petroleum Contaminated Soils Eve Riser-Roberts, 2020-11-25 This book combines the results of current research with essential background material to provide complete in depth coverage of every aspect of in situ and ex situ bioremediation as well as an extensive overview of the physical and chemical processes currently available for treating petroleum contaminated soils Critical information has been collected and assembled under one cover to provide a convenient reference for anyone who must contend with this worldwide problem *Remediation of Petroleum Contaminated Soils Biological Physical and Chemical Processes* describes how to optimize the biodegradation of petroleum hydrocarbons in soil water systems It reports on the susceptibility of various petroleum components to biodegradation by microorganisms and considers all groups of microorganisms for their potential contributions The book also deals with problem areas such as the transport of organisms oxygen or nutrients throughout the subsurface as well as biodegradation of polynuclear aromatic hydrocarbons PAHs and nonaqueous phase liquids NAPLs In addition the book presents a variety of methods for monitoring bioremediation This reference discusses current soil remediation processes and includes many innovative approaches It also investigates means of controlling volatile organic compounds VOCs and leachate and addresses methods for collecting and treating these secondary waste streams The expansive coverage of this book will furnish readers with a wide range of options for developing treatment strategies and for customizing procedures for specific requirements *Remediation of Petroleum-contaminated Soils* David J. Friend, 1996 This synthesis will be of interest to state transportation personnel involved with project planning and location administrative and regulatory personnel design staff general civil geotechnical and environmental engineers and project managers construction and maintenance engineers and staff It will also be of interest to federal and state environmental agencies and to environmental consultants and contractors as well as to trainers in the field of petroleum contaminated soil remediation This synthesis describes the remedial technologies that may be available to transportation agencies faced with the regulatory responsibility to clean or remediate petroleum contaminated soils in the vadose zone unsaturated soils above the groundwater table at a particular site as well as the state of the practice within the agencies This report of the Transportation Research Board describes the applicability and cost effectiveness of alternate technologies to remediate petroleum contaminated soil Practices currently being used by state transportation agencies to remediate petroleum contaminated soils both on site and off site are also described This summary of transportation agency practice complements the limited telephone survey of soil remediation techniques that was performed in preparing NCHRP Report 351 Hazardous Wastes in Highway Rights of Way Assessment and Remediation of Petroleum Contaminated Sites G. Mattney Cole, 1994-03-24 Federal regulations have required thousands of underground storage tanks USTs to be dug up and removed or replaced The contamination of soil and ground water from leaking USTs has become widespread and has produced an overwhelming number of sites that require remediation *Assessment and Remediation of*

Petroleum Contaminated Sites presents the broad scope of the remedial process from initial site assessment to closure in an integrated understandable format The book guides you effortlessly through regulatory requirements site assessments and sampling and remediation methods RCRA and CERCLA federal regulations are addressed The chemistry and toxicology of petroleum hydrocarbons in the remediation process are explained and factors affecting soil remediation are discussed Environmental assessments site characterizations remediation planning and remediation methods are all covered in detail The book is an essential guide for environmental consultants regulatory agency personnel engineers and environmental attorneys **Principles and Practices for Petroleum Contaminated Soils** Edward J. Calabrese,Paul T.

Applying Ozone to Accelerate Remediation of Petroleum-contaminated Soils Tengfei Chen, 2018 Petroleum contamination is ubiquitous during extraction transportation refining and storage Contamination damages the soil s ecosystem function reduces its aesthetics and poses a potential threat to human beings The overall goals of this dissertation are to advance understanding of the mechanisms behind ozonation of petroleum contaminated soil and to configure an effective integrated bioremediation and ozonation remedial strategy to remove the overall organic carbon Using a soil column I conducted batch ozonation experiments for different soils and at different moisture levels I measured multiple parameters e g total petroleum hydrocarbons TPH and dissolved organic carbon DOC to build a full understanding of the data that led to the solid conclusions I first demonstrated the feasibility of using ozone to attack heavy petroleum hydrocarbons in soil settings I identified the physical and chemical hurdles e g moisture mass transfer pH needed to be overcome to make the integration of chemical oxidation and biodegradation more efficient and defines the mechanisms behind the experimental observations Next I completed a total carbon balance which revealed that multiple components including soil organic matter SOM and non TPH petroleum competed for ozone although TPH was relatively more reactive Further experiments showed that poor soil mixing and high soil moisture content hindered mass transfer of ozone to react with the TPH Finally I pursued the theme of optimizing the integration of ozonation and biodegradation through a multi stage strategy I conducted multi stages of ozonation and bioremediation for two benchmark soils with distinctly different oils to test if and how much ozonation enhanced biodegradation and vice versa With pH and moisture optimized for each step pre ozonation versus post ozonation was assessed for TPH removal and mineralization Multi

cycle treatment was able to achieve the TPH regulatory standard when biodegradation alone could not. Ozonation did not directly enhance the biodegradation rate of TPH; instead, ozone converted TPH into DOC that was biodegraded and mineralized. The major take home lesson from my studies is that multi stage ozonation and biodegradation is a useful remediation tool for petroleum contamination in soil.
