Remote Sensing:

Remote Sensing Robert A. Schowengerdt, 1997 Remote sensing is the use of electromagnetic sensors to monitor the earth's surface and atmosphere This technique can produce anything from topographic or geologic maps to two or three dimensional distributions of environmental parameters to the detection of developing hurricanes or floods These sensors produce digitized data so it is important that anyone working in remote sensing is familiar with the techniques used This updated second edition discusses a unified framework and rationale for designing and evaluating image processing algorithms
