Chen,Fang-Tzu Hsu,2020-04-27 The development of science has been an ideological struggle that lasted over three millennia  
At and after the times of the Babylonian Empire however the pace of scientific evolution was painfully slow This situation  
changed after Copernicus kick started the Scientific Revolution with his heliocentric theory Newton s law of universal  
gravitation transformed natural philosophy previously focused on mythology and abstract philosophical thinking into an  
orderly and rational physical science Einstein s redefinition of space and time revealed a new and central principle of the  
Universe paving the way for the huge amounts of energy held deep inside physical matter to be released To this day many of  
the our known physical theories represent an accumulation of changing knowledge over the long course of scientific history  
But what kind of changes did the scientists see What questions did they address What methods did they use What difficulties  
did they encounter And what kind of persecution might they have faced on the road to discovering these beautiful sometimes  
almost mystical ideas This book s purpose is to investigate these questions It leads the reader through the stories behind  
major scientific advancements and their theories as well as explaining associated examples and hypotheses Over the course  
of the journey readers will come to understand the way scientists explore nature and how scientific theories are applied to  
natural phenomena and every day technology      **Teaching Constructivist Science, K-8** Michael L. Bentley,Edward S.  
Ebert,Christine Ebert,2007 Invite young minds to engage in meaningful standards based science Good teachers know that

science is more than just a collection of facts in a textbook and that teaching science goes beyond the mere transmission of information. Actively engaging students in the learning process is critical to building their knowledge base, assessing progress, and meeting science standards. Teaching Constructivist Science K 8 shows teachers how to transform students' natural curiosity into dynamic learning opportunities. By helping students construct new knowledge using the understandings they bring to the classroom, teachers can make the most of instruction and new learning experiences. With practical applications, teaching strategies, activities, and assessment tools, this reader-friendly book demonstrates how to teach student-ready standards-based science. Teachers will be able to use classic and new activities to teach big ideas with basic materials. An interview approach for uncovering student misunderstandings that block new learning. A rich resource list for finding materials and organizations. Guidelines for building a science-friendly environment. Sample lessons and learning experiences aligned to national science standards. Discussion questions for teacher study groups in each chapter. For both experienced and novice teachers, this accessible resource provides the perfect method to teach science in sound ways that make sense to students.
