Civil Liability for Damage Caused by Global

Navigation Satellite System Dejian Kong, 2019-05-24 It has come to pass that national security economic growth and transportation safety not to mention such infrastructure as banking and electricity are severely dependent on the positioning information navigation capabilities and time dissemination provided by Global Navigation Satellite System GNSS However GNSS is not risk free The more humanity depends on GNSS the more risks it has to face It is irresponsible to wait for an accident to happen merely to justify the need for an appropriate GNSS civil liability regime This hugely important book examines the structure of such a regime in unprecedented depth and proposes a uniform governance structure composed of an institutional framework and a legal system for GNSS with safety of life signals at its core Exploring whether the current international law including air law and space law conventions is adequate to deal with the issue of civil liability in the context of GNSS the author confronts and responds to such crucial issues as the following ensuring that parties suffering damage caused by GNSS get fair prompt and adequate compensation balancing the interests of the GNSS industry in order for it to maintain its sustainable development identifying legal gaps arising in the GNSS context and how we should move forward determining which parts of the value chain of GNSS may qualify as origins of damage and construing GNSS civil liability mainly from contractual product and general tort liability perspectives The author assesses various solutions for GNSS civil liability based on their feasibility including an institutional defence against the doctrine of sovereign immunity and recommendations on how several international organisations can work together in this endeavour He examines scholarships travaux pr paratoires conference documents and treaties as well as national legislation A hypothetical case where damage is caused by GNSS is elaborated illustrating each legal relationship and causal link In its committed urging of GNSS signal providers to improve the stability of the satellite navigation systems and its insightful recommendations on how to promote public safety this book offers a roadmap indicating a truly viable international regime of GNSS civil liability Relevant international organisations and States as well as practitioners are sure to respond positively to its unique and important analysis

book examines transatlantic politics through an analysis of 60 years of US European strategic interaction in space The significance of space politics for the study of transatlantic relations receives surprisingly little scholarly attention As a

theatre of interaction transatlantic space politics reflects the vicissitudes of European and US power in the international system An understanding of space politics is therefore vital in understanding the status and prospect of the transatlantic order Using established IR theories the author investigates transatlantic space politics and proposes a theoretical explanation which is distinct from the conventional wisdom of the transatlantic security community More specifically he distinguishes between the constitutive and regulatory effects of the transatlantic security community an approach rarely employed in other research in the field Overall this book suggests not only that the transatlantic institutional pillar requires repair but also that the ideational factors need to be revitalised in order to consolidate the transatlantic alliance This book will be of much interest to students of space power transatlantic politics strategic studies foreign policy and IR security studies in general
