

Vantage Multifeed Mount

Four Satellites with One Antenna

If you've ever thought about expanding your satellite system to receive more than one orbital position, you really only have two possibilities: either you install a (Dish)Net motor on your satellite or multifeed parabolic dish. Most commercially manufactured single dish use the idea of a (Dish)Net motor since the noise from one of these small motors could be somewhat disturbing, especially at night. This feature only has second priority solution: multifeed. Various manufacturers offer special antennas with double reflectors providing a reception range of roughly 60°. Vantage, based in Germany, thought that it didn't always have to be this way and instead as a solution that provided multifeed reception using a standard antenna. The result was a multifeed unit that at first glance looked rather complex but after examining the individual parts it became apparent that the manufacturer spent quite a lot of time in its design.

Typical multifeed mounts are usually installed on a rigid rod and the full receiver can only be moved to the point of the dish. In

the 45° - 135° range of the antenna focal point, this for the most part works without any problems. But the further east or west you go, the worse the reception becomes. The receivable satellites are not positioned along a straight line, as you might expect, instead it is more of a curve as created from the satellite antenna. The southern-most satellite from your position is at the highest elevation point and all the other satellites are on a curve that runs from east to west. Thus, Vantage manufactured their multifeed units are in such a way that they can be adjusted vertically, horizontally and across. This lets you adjust the position of each LNB for optimal reception.

The workmanship of the individual parts is rather good and the assembly is easy. We also liked the fact that it only weighed 34.3 lbs (15.6 pounds). This multifeed solution was clearly designed for use with Vantage receivers although we had no trouble installing this feeder on other antennas (such as Gossamer).
