## **Saving The Tropical Forests:**

Saving the Tropical Forests Judith Gradwohl, Russell Greenberg, 2013-11-05 The destruction of the tropical forest is one of the major problems of our time Vast areas are rapidly becoming wastelands which support only a few tough weeds perhaps some cattle and the farms allowed to the poor This book provides a vision of hope in Latin America Africa And South East Asia growing numbers of people are developing techniques specifically designed to promote the wise use and preservation of remaining forest lands However these grassroots strategies are often ignored in favour of grandiose schemes which inevitably fail This pattern must be broken now or the tropical forests will be lost forever Published in association with the Smithsonian Institution Preface by Michael Robinson Director National Zoological Park Smithsonian Institution Originally published in 1988

An unflinching investigation of the false promises of land sparing exposing how its illusory successes mask the failures of green capitalism For two decades the concept of land sparing the claim that agricultural intensification can spare land by preventing forest clearing for agricultural expansion has dominated tropical forest conservation Land sparing policies transform landscapes and livelihoods with the promise of reconciling agricultural development with environmental conservation But that land sparing promise is false Based on six years of research on agrarian frontiers in Indonesia Brazil and Bolivia this book traces where and how land sparing becomes policy and charts the social and ecological effects of these political contests Gregory M Thaler explains why land sparing appears successful in some places but not in others and reveals that success as an illusion achieved by displacing deforestation to new frontiers The failure of land sparing exposes a harsh truth behind assurances of green capitalism capitalist development is ecocide

Attempts to halt the destruction of rain forests and other natural habitats in the tropics have met with little success In particular national parks like those found in wealthy nations have proven difficult to establish in Africa Asia and South and Central America More often than not people inhabiting areas designated for protection resist being told by outsiders that they must change how and where they live Alternative approaches frequently embodied in integrated conservation and development projects ICDPs are now being pursued The goal is to address local communities desires for improved standards of living while simultaneously meeting conservation objectives Nature based tourism and sustainable harvesting of forest products are the centerpieces of ICDPs and related initiatives This book assesses the viability of conservation strategies predicated on the adoption of environmentally sound enterprises in and around threatened habitats Drawing on research in Brazil Costa Rica Ecuador and Peru and on his extensive experience working in South and Central America and the Caribbean the author demonstrates that it is rare for forest dwellers to derive much benefit from ecotourism the extraction of timber and other commodities or the collection of samples used in pharmaceutical research Often these activities are simply unprofitable Even when they are profitable the benefits tend not to accrue locally but instead are captured by outside firms and individuals who can provide

important services like safe and reliable transportation The author contends that human capital formation and related productivity enhancing investment is the only sure path to economic progress and habitat conservation *An Economic Approach to Saving the Tropical Forests* David William Pearce,1990 Emerging Threats to Tropical Forests William F.
