

SEX-RELATED COGNITIVE DIFFERENCES

An Essay on Theory and Evidence

JULIA A. SHERMAN, Ph.D.

*Director, Women's Research Institute of Wisconsin, Inc.
Madison, Wisconsin*

This provocative book, written by one of the leading authorities in the field, provides a review and critical evaluation of accepted theories of sex-related differences in cognitive functioning. Doctor Sherman, backed by careful research and meticulous analysis, openly challenges existing opinions on this subject. She concludes that, when relevant variables are controlled, there are no appreciable sex-related differences in verbal, spatial, mathematical or other cognitive skills.

Lips,2020-04-10 Are sex and gender really two different things How malleable is gender identity Do both gender and sex have to be conceptualized as binaries as having two distinct but complementary categories Should we emphasize gender differences or is that the wrong question When should we call a gender difference small Are women really nonaggressive or does that label stem from stereotyping How does subtle or modern sexism work on its targets Scholarship on these and other gender related questions has exploded in recent years Hilary Lips synthesizes that research for students in an accessible and readable way Concepts on sex and gender are presented with the social context in which they were developed As in previous editions Lips takes a multicultural approach discussing the gender experiences of people from a wide range of races cultures socioeconomic statuses and gender and sexual identities She emphasizes empirical research but takes a critical approach to that research

Kaufman,2004-12-27 Females consistently score lower than males on standardized tests of mathematics yet no such differences exist in the classroom These differences are not trivial nor are they insignificant Test scores help determine entrance to college and graduate school and therefore by extension a person s job and future success If females receive lower test scores then they also receive fewer opportunities Why does this discrepancy exist This book presents a series of papers that address these issues by integrating the latest research findings and theories Authors such as Diane Halpern Jacquelynne Eccles Beth Casey Ronald Nuttal James Byrnes and Frank Pajares tackle these questions from a variety of perspectives Many different branches of psychology are represented including cognitive social personality self oriented and psychobiological The editors then present an integrative chapter that discusses the ideas presented and other areas that the field should explore *Feminist Interpretations of Plato* Nancy Tuana,2010-11-01 The essays in this anthology explore the full spectrum of Plato s philosophy and are representative of the variety of perspectives within feminist criticism The essays in the first section focus primarily on Plato s social and political theory and in particular the place of women within the state The second section concentrates on examining the role of the feminine within Plato s metaphysics and epistemology Tuana introduces both sections and a detailed bibliography is included **Women with Epilepsy** Martha J. Calhoun,2021-07-01 **From Sex Differences in Neuroscience to a Neuroscience of Sex Differences: New Directions and Perspectives** Belinda

Pletzer,2015 This research topic aims to integrate scattered findings on sex differences in neuroscience into a broader theory of how the human brain is shaped by sex and sex hormones in order to cause the great variety of sex differences that are commonly observed It can be assumed that these differences didn t occur arbitrarily but that they rather determined and still determine evolutionary success of individuals and were shaped by the processes of natural and in particular sexual selection Therefore sex differences are not negligible and sex difference research cannot be discriminating against one sex or the

other In fact a better understanding of the underlying causes of sex differences has great advantages for both men and women and society as a whole not only in terms of health care but in every aspect of life Gender equality can only work out if it is equally well understood for men and women what their individual resources and needs are Therefore it is of great importance to pave the way for identifying the underlying principles of structural and functional brain organization that cause men and women to act think and feel differently To this end it is of particular interest to identify possible similarities and interrelations between sex differences that did so far stand separately in order to investigate whether they share a common source To understand where a specific sex difference comes from and whether or not it is caused by the same principle as other sex differences it is necessary to explicitly link sex differences in behavior to their neuronal correlates and vice versa link sex differences in brain structure and function to their behavioral outcomes In particular a new understanding of male and female brain functioning may arise from findings on how sex hormones interact with various neurotransmitter systems In the past few years several findings demonstrated that women s behavior is influenced by the sex hormone fluctuations they experience naturally during their menstrual cycle to the extent that sex differences may only be detectable in one cycle phase but not another The study of menstrual cycle dependent effects gives important hints about which sex differences are activational and which are organizational Additionally it only recently came to attention that hormonal contraception may alter a women s mood cognition and behavior as a consequence of changes in brain structure and function The underlying mechanisms are so poorly understood that it is even hard to predict whether hormonal contraception will mask or amplify sex differences in a given task Since the oral hormonal contraceptive pill is meanwhile used by 100 million women worldwide and even by teenagers whose brains are not yet fully developed the question of how the synthetic steroids contained in hormonal contraceptives act on the brain is to be studied hand in hand with naturally occurring sex differences This topic summarizes the current state of the art in sex difference research and gives new perspectives in terms of hypothesis generation an methodology Both are necessary to gain a complete picture of what it is that makes a brain male or female and move towards a neuroscience of sex differences
